3. Welcome!

Yahoo group: chattradio
Date: 1998-06-23 16:13:14 UTC
From: Matthew Sadler, KF4LHP
Topic: 3 Message: 3

Let me welcome those who have signed up so far to the list. Everyone who has signed up thus far should have received an introductory email explaining the list. If you didn't, go to http://www.qsl.net/kf4lhp/chattradio/chattradio.html for some information on what is appropriate to post to the list.

The reason I've made this a restricted list, where subscribers must be approved, is to keep an eye on who subscribes and who doesn't... as well as to keep the spam level down. Anyway, to keep on topic, I'll throw out some bait...

Signal Mountain PD, even though they have a talkgroup on the city's 800 trunked system and had been using it for a while, has gone back to their conventional 800 MHz repeater, 854.9875 PL 127.3 Hz. And, on the topic of the city's trunked system, the city council approved a deal where the county will be allowed to use the system once it is built out county-wide for $40,000 per year. Mind you, the county's EMS supervisors are already on it...

Matthew, thanks for your welcoming remarks and the info re Signal Mtn, also the
use by Hamilton Co. of the Chatt city TRS. To other subscribers to this list, my
name is Thad Osborne and I live about 100 mi NE of Chattanooga nea Kodak, Tenn.
I typically monitor with my PRO-2026 RS scanner with a CD-1 CSI tone decoder.
Unfortunately, the 2026 was "zapped" by Mother nature Sunday 06/14. I have been
advised by Tandy Nshville that replacement of the main board will cost about $150.00
(they don't do component replacement-only board replacement. Good old USA!) With
the storms we have been experiencing, it might be a good idea to remind all using
base equipment to not only ground their antenna structure, but disconnect coax
when storm conditions might be present. Might save you $$.
I am sorry to see Chatt and Hamilton Co migrate from UHF. One of the last major
urban areas in E Tenn to do so.
Greetings and welcome to all others on this list.

8. Chattannoga trunked system talk groups

Yahoo group: chattradio
Date: 1998-06-25 22:54:37 UTC
From: Jim Knight
Topic: 8 Message: 8

First, a brief introduction of myself as suggested by our illustrious moderator:
My name is Jim, call sign KD4EHN.
My radio interests range from DC to daylight (although 2 GHz is the current limit on my capabilities as I don't own any satellite equipment at present)
I live on a hill in Soddy Daisy and monitor HF using a Drake R8 and an off-center fed dipole. For VHF and UHF I use a BC895XLT trunktracker, ICOM R7100, Universal M400 decoder, and a Scantenna mounted on a pole outside. Also I use a BC235XLT trunktracker for mobile monitoring.
My outside ham antenna and alternate VHF/UHF monitoring antenna is a Nevada SE1300 discone.

Enough about me. Here is my list of talk groups on the Chattanooga trunked radio system:
17296 CARTA main channel
18480 CARTA supervisors
18320 CARTA special events
18512 CARTA Care-A-Van (transportation for elderly)
18192 Lovell Field security
18288 Airport crash/rescue
17712 Water/sewage treatment F1 (Moccasin Bend)
17744 Water/sewage treatment F2
17040 MOSCAD (Data to open fire hall doors)
18672 Signal Mtn Fire
17136 Signal Mtn Police
18608 EMS operations
18640 EMS supervisors
17392 Chattanooga city shop
17840 Radio shop
16796 Chattanooga Fire main channel
17200 Fireground 1
17232 Fireground 2
17104 Fire dept. admin (channel 4)
17008 Fire prevention
17072 Fire dept. supply/maintenance
17552 Special events (?) in use @ air show '98
18704 Disaster 1
18736 Disaster 2
16432 Chattanooga Police ch.1 (A/B/C/D dispatch)
16464 Chattanooga Police ch.2 (E/F/G dispatch)
16816 Chattanooga Police ch.3 (Charlie channel)
16496 Chattanooga Police ch.4 (Info channel)
16528 Chattanooga Police ch.5 (Mutual Aid)
16560 Chattanooga Police ch.6 (Car to car)

16784 Chattanooga Police ch.7 (City Net) have heard speed reduction
16848 Detective Channel
16880 SWAT channel

If anyone knows about addtional talk groups, I would appreciate knowing about them. Also I am interested in any information on the talk groups on the Saber commercial trunked system.

9. NPS CCNMP

Yahoo group: chattradio

From: Matthew Sadler, KF4LHP
Topic: 9 Message: 9

Here's my information on the National Park Service's Chickamauga and Chattanooga National Military Park. I work at Ruby Falls, so I know several of the LOM (Lookout Mountain) rangers, as well as knowing a former ranger.

FREQUENCIES
Repeater Out: 168.325 MHz
Repeater In: 167.075 MHz
CTCSS Tone: 173.8 Hz

CALLSIGNS
KID715: Chickamauga Battlefield Visitor's Center
KID716:
KID718: Point Park Visitor's Center
KID719:
KID720:

UNIT NUMBERS
100: Pat Reed, Park Superintendent
101: Superintendent's Secretary
200 series: Maintenance
400 series: Law Enforcement
401: Jim Staub, District Ranger - Chickamauga
430: Charlie Spearman, District Ranger - LOM
431: Dennis Curry - LOM
435: John Housch - LOM

EQUIPMENT
Repeater: Motorola MSR2000 inside Point Park entry gate feeding 4 element folded dipole
Point Park Visitor's Center: Motorola HT220 Slimline HT
Chickamauga Battlefield Visitor's Center: Motorola DC Remote Handset

I also have heard the LOM rangers recently (within the last week) on the Lookout Mountain Police channel of 460.375 MHz, PL 107.2 Hz. I'll ask the rangers the next time they come by about this...

One final note: Ruby Falls' parking lot staff uses Ritron Jobcom JBC-15M handhelds, on 151.625 MHz, CSQ. Yes, we do hear everyone in town...

10. Thanks to all

Yahoo group: chattradio
Date: 1998-06-26 06:07:20 UTC
From: Matthew Sadler, KF4LHP
Topic: 10 Message: 10

Thanks to those who have signed up so far, especially those who have introduced themselves... I've sent a brief article about the listserver to Charlie Curle, AD4F, the Chattanooga ARC newsletter editor, I'd assume it will be printed without any problems.

And, about myself:

I'm located in Brainerd near the I-24/I-75 split. For monitoring purposes, I'm using a Uniden Bearcat BC200XLT and BC235XLT (TrunkTracker) scanners, along with a Yaesu FT50RD, which will do CTCSS _and_ DCS squelch formats, as well as having a DTMF decoder. I also have a Uniden BC560XLT for mobile use and a Yaesu FT-8100R with CTCSS decode board. My mobile antennas are Larsen, while at home I have a Comet GP-3 about 20 feet AGL that I use along with standard UHF handheld antennas.

My main monitoring interests are federal government, the city's trunked system, McCallie School (my alma mater), and local shopping malls and utilities (except for the gas company and the cable TV people).

PLEASE PLEASE PLEASE! Pass the word about the listserver. I'm trying to get the word out to as many people as possible, but I need all the help I can get. The more people who subscribe and actively use this resource, the better it gets. Thanks for subscribing.

12. Clear traffic on 171.75!!!!

Yahoo group: chattradio
Date: 1998-07-01 22:46:24 UTC
From: Jim Knight
Topic: 12 Message: 12

I have often heard scrambled traffic on 171.75, so much so that I haven't kept it in memory on any of my scanners. Just a few minutes ago I was searching the VHF federal band, and I heard clear traffic on this freq for the first time. It concerned a door being secured, and that was it. At the end of the last transmission there was a burst of the digital hash. I have the scanner locked on to it now and am hearing the scrambling again. Don't know if the transmission I heard was just a fluke or not, but the frequency might bear watching. I have speculated this might be a TVA police frequency but have no way to prove or disprove that.

13. 171.75 ID'd!!!!!!!!

Yahoo group: chattradio
Date: 1998-07-01 23:19:25 UTC
From: Jim Knight
Topic: 13 Message: 13

This freq is definitely being used at the Chattanooga TVA office complex, which means it's almost surely the TVA police. I just heard them discussing someone wanting to get in at the Missionary Ridge entrance, and saying to be sure to check their ID.

And to add something to this, I'm showing it with a PL of 110.9 Hz (just got that off my Yaesu FT-50RD. But, I'm still hearing some scrambled traffic, so it might be wise to program it in if you can with the PL.

Also, it appears to be a repeater with an almost non-existant squelch tail.

15. Recent TVA thread...

Yahoo group: chattradio
Date: 1998-07-03 18:05:42 UTC
From: Matthew Sadler, KF4LHP
Topic: 15 Message: 15

With the recent TVA thread I think it's appropriate for me to post my TVA list and ask for additions or corrections...

40.620 Work Crews (think this one isn't used anymore)
168.575 Administration repeater, English Mtn., PL 103.5, input on 166.6375
171.750 Chattanooga Office Complex security, PL 110.9 (thanks Jim!)
172.425 Digital Paging
172.625 Line Crews (lots of DTMF usage on this channel, probably remote controls)
172.650 Nuclear Preparedness, autopatch, PL 94.8
415.450 Chattanooga Office Complex maintenance

And one I'm not too certain about, 419.150. Heard telemetry on this, full-scale at Apalachia Powerhouse in eastern Polk County on the Hiwassee River.

To my knowledge, it is not, at least around the nuclear plants.
However, there's no telling what kind of equipment might be used at some
of the fossil plants! This freq is probably a leftover from when TVA
had its own division of construction.

And here is one to add to the list for those that might be around the
Watts Bar area:
171.0 simplex is in use at the Watts Bar heavy equipment facility which
is located between the nuclear plant and the (now inactive) fossil
plant. The roof of this facility has lots of nice yagi antennas on it
which once were used to communicate with the drivers of the various
trucks, cranes, etc. which have their "homes" there. When I visited
there a year or two ago they told me they don't use the antennas any
more since (1) they have greatly reduced the number of vehicles they
maintain and (2) the drivers now carry cell phones.

For those close to Sequoyah:
The trainees using the Sequoyah simulator use simplex radios which were
bought from a catalog retailer. These radios are on 462.575. Yes, you
read that right, it's a GMRS repeater output frequency. Sometimes they
get interference from other GMRS users, who of course can't hear what's
going on on the simulator since the simulator radios are low power,
probably 1/2 watt.

17. 171.750 - TVA Police?!?!

Yahoo group: chattradio
Date: 1998-07-05 00:06:08 UTC
From: Matthew Sadler, KF4LHP
Topic: 17 Message: 17

Well, I've been listening some more to 171.750 and between the scrambled traffic, I'm hearing still quite a few transmissions in the clear. Heard one unit advise he was "out on foot near Fontana" which leads me to believe that this isn't just security at the TVA complex, it may well be an area-wide linked frequency for TVA Police.

Just now heard a request for a tag check on a TN tag...

300 seems to be the base.

Also, anyone know who uses 168.225 MHz? I've never heard a transmission in the clear.

Topic: 19 Message: 19

I just wanted to say hello to all as I have just joined-up on this group.

I have worked in commercial radio for over 17 years, the past 12 in sales and the last 3 as Local Sales Manager for WSKZ-FM (KZ-106).

My primary interest in this group is scanning. When I'm actively in the hobby, I utilize a AR8000 scanner, upgrading from a Uniden BC205. Most of the frequencies around here are well-covered on the KF4LHP homepage, but I hope to help add to that list.

Thanks for creating this group!

From: scannerdude@...
Subject: [TrunkCom] McMinn County, TN

On a recent trip to the Chattanooga, TN area, I checked out McMinn
County. They are licensed on 3 trunked frequencies, but all were
silent:

856.7375
857.7375
858.7375

Police were still using their VHF channel of 155.700r (input 154.830, PL

114.8).

As for Chattanooga's Type 2 system, I didn't find anything more than
what
is already listed on the trunking websites.

22. Cell Tower Stuff

Yahoo group: chattradio
Date: 1998-07-14 19:00:22 UTC
From: Matthew Sadler, KF4LHP
Topic: 22 Message: 22

Look for new cell towers at 5724 Highway 58 near Brown Middle School (180 feet tall) and 9521 Smith-Morgan Road near Hixson Pike (140 feet tall) sometime soon. The Planning Commission has recommended that the Hamilton County Commission approve requests to allow these towers to be built by Sprint PCS/Gearon Communications.

In other cell site news, Gearon Communications is suing over a 195 foot tower they've built on Latta Street. The suit claims that Gearon has entered into a $541.66/month lease with Jeffrey Dalrymple, and that Gearon has co-location agreements with Sprint and Chase Telecommunications but that Dalrymple has padlocked the gate and has refused access to the site. Gearon claims that they have spent $180,000 on the site. Chancellor Howell Peoples has signed a temporary restraining order preventing the defendant from denying access to the site until a hearing on July 23.

23. The Search for Eric Robert Rudolph

Yahoo group: chattradio
Date: 1998-07-14 21:15:45 UTC
From: Larry Van Horn
Topic: 23 Message: 23

First of all, I guess it is time to decloak, come out of the lurk mode and intro myself. I would like to thank Matthew for inviting me to the list. Unfortunately my duties at work have been such that I haven't had a chance to contribute much since I joined.

Intro

I am the managing editor of Satellite Times magazine and the assistant editor and columnist in Monitoring Times magazine. Both are publications of Grove Enterprises located here in beautiful Brasstown, NC about 15 minutes SE of Murphy NC in Cherokee County. Cherokee is the county that straddles the far southwest Tennessee-North Carolina border. We are the largest mail order house in the US for scanners, shortwave radio and related accessories and publications.

I have been in the hobby for 35 years now and listen to everything from DC to light. I started out as a writer for Monitoring Times in 1983 and have written monthly columns on satellites, fed file, trunk tracking, Utility World (10 years) and now my newest adventure starting with the September issue-- milcom. Add dozens of features and several books and I have been busy. ;-)

Now to the subject at hand. As you will see tonight on the news, they believe Eric Rudolph the bomber of the Alabama clinic has been seen again about 8 miles from here last week. The search has become more intense and new frequencies are starting to pop up. From my location here in B-town I can hear Chattanooga fed agencies (in fact, I can hear quite a few public service agencies in eastern TN counties here). Since I can hear you folks, you might be able to hear some of the stuff here so I thought I would pass along a little guide to monitor western NC.

Civil Law Enforcement

158.970 NC Cherokee County SO r/out (Murphy)
158.790 NC Murphy PD simplex
154.725 NC Andrews PD car to car channel 2
154.875 NC Clay County SO simplex (this is also the western NC law enforcement SO net)
460.3125 NC Macon County SO lp dispatch repeater (western part of county)
154.785 NC Macon County SO r/out
154.995 NC Cherokee County Fire Dispatch r/out (West)
154.445 NC Cherokee County Fire Dispatch r/out (East) Valleytown Fire
155.160 NC Cherokee County EMS dispatch simplex
155.340 NC Murphy Medical Center Hospital-Ambulance simplex
154.310 NC Clay County Fire/Rescue dispatch r/out

Feds

165.2875/166.5375 GA ATF r/out Brasstown Bald Mountain (also being
used simplex)
165.9125 ATF channel 5 simplex chit-chat
167.5375/163.8625 FBI Probable portable repeater for extended car to
car <Delta 6>
167.5625 FBI simplex <Delta 4>
167.5875/162.7625 FBI repeater on Brasstowb Bald Mountain <desig unknown>
173.9375/?163.9875 FBI repeater. This one has just popped up in the
last week. Just heard them testing on it and I believe they referred to it
as <Delta 1> and its location on Annabell Bald (I'm going to check my map
tonight).

They believe he is held up in the Nantahala NF so 171.475/172.225 should be
watched.

Also I have heard some traffic that seems to indicate their usage of the
state wildlife comm system. Here in NC that system is dispatched out of
Raleigh remotely to repeaters throughout the state. It is also used by the
state bureau of investigations (NC SBI). We can hear three repeaters here in
western NC on: 159.315, 159.345, and 159.390. The feds have probably rekeyed
their radios to allow for ops on wildlife when they get deep, deep in this
mountainous terrain doing their search. We also have indications that
aircraft are being moved into the area, but we don't have a handle on that
as of yet.

I don't know how much of this you folks can hear, but this should get most
of you started in the right direction. I would assume that the next couple
of weeks will be real interesting listening for those of us who live in
these parts.

Have fun out there, good hunting and greetings from western NC.

Here's a few listening targets in town...

1) Goony Golf! I was just over there about 30 minutes ago playing Laser Tag (came in 2nd of 16, I'm a one man killing machine) and they have several models of low-end Motorola portables, like Radius P50 and Spirits. Couldn't figure out which band or frequencies. Since I'll be back over there sometime soon, I'll try to get a look at the back of the P50 that was on the counter and see what it says. They also have armed security guards, 3 of them were there when I was.

2) Lake Winnepesaukah. Can't honestly remember the last time I was there but they had some (I think) VHF Motorola portables. Anyone know their frequencies? I'm too concerned with my safety to go over there... :)

3) Big Lots on Brainerd Road - they have some of the low power Radio Shack FRS portables (single channel, 100 mW, 462.5625 MHz).

Anyone got any on-site stuff they'd like to share?

Topic: 25 Message: 25

Almost forgot. Gayle and I were in C-town last Saturday getting some new tires for the family roadster. We were in the Auto Shop portion of Sears at Hamilton Place and I saw one of the sales clerks carrying a HT (not sure on the brand). After lunch while they were all scattered around the service bay I reached over the sale counter and keyed there radio while taking a reading on ye ole Opto Scout (I never good anywhere without it).

So, Matthew for your website:

Sears Automotive Center Hamilton Place Mall: 154.570 MHz (surprise ;-)

173.9375 still is quite active this morning with a lot of DVP (nothing in the clear).

New one popped up last night:

153.740 GA Department of Corrections simplex (statewide). They have some dogs up here and last night they had an aircraft using their simplex to communicate. He did mention several other aircraft but I haven't found their common working freq yet, but it is only a matter of time.

Take care all,

Larry Van Horn

Actually, this is in use at most GA correctional facilities. I know
Walker Correctional Institute near Lafayette uses this and I can usually
hear the base and occasionally hear mobiles.

Matthew, I would try the VHF itinerant frequencies for some of these businesses.
Unless they have taken the time and trouble to apply for licenses, something buyers
of these over-the-counter radios can easily neglect, they will not appear in any li-
cense database.
A freq counter can be quite handy around such places.

30. THP Chattanooga (Tiftonia Post)

Yahoo group: chattradio
Date: 1998-07-15 17:13:34 UTC
From: TGO1@xxx.xxxx
Topic: 30 Message: 30

In response to a request, I post this summary of radio sites and channels for the Tennessee Highway Patrol District 2:

Site # Location
Channel & Tone:

1 Chattanooga
2 Aetna Mtn, Hamilton Co. 1&7, 3&2,
High band A5T0 (NLEEC=155.475)
3 Dunlap, Sequatchie Co. 1&1, 5&1,
High band A7T4
4 Sewanee, Franklin Co. 1&4, 8&4,
High band A7T1
5 Benton, Polk Co. 1&2, 6&2
6 Etowah, McMinn Co. 3&2, High
band A7T5

The decode tone for low band channels in Dist 2 is 114.8. The decode tone for high band channels statewide is 100.0,
except for the NLEEC which is "open Squelch."
Note that some encode tones for the low band system are different from an earlier map issued in the 1970's. I believe
this is the current information.
Question: I see a high band mobile only authorisation for THP of 154.770. Any ideas as to use?
Thanks.
Thad Osborne

I'm assuming that the A7T* for high band stuff is 155.430 repeater - am
I right?

> Question: I see a high band mobile only authorisation for THP of 154.770. Any
> ideas as to use?

Hmm... I think I saw this listed somewhere as alcoholic beverage
control, or it may be for extenders. Not sure.

36. FBI 167.6375 and LMPD/NPS

Yahoo group: chattradio
Date: 1998-07-19 23:24:38 UTC
From: Matthew Sadler, KF4LHP
Topic: 36 Message: 36

In response to Alan's note about the FBI having an office in Rossville, it's listed in the current phone book, at 410 Chickamauga Avenue... I've heard this channel in use a long time ago but I didn't have PL decode capability then.

Also, I spoke with one of the NPS park rangers today who confirmed that he has a UHF portable on Lookout Mountain PD channel. He said that they don't get on their channel much but when they do they use the same unit numbers as they do on their own channel, and that only the Lookout Mountain rangers have them. I also spoke earlier today with a park maintenance employee who had a new-looking Motorola Radius SP50 on the park channel (168.325, PL 173.8).

Thanks for the great posts... let's keep it up!

42. VHF federal band activity today

Yahoo group: chattradio
Date: 1998-07-24 16:59:20 UTC
From: Jim Knight
Topic: 42 Message: 42

The VHF federal band has been alive this morning...have logged several new frequencies and heard activity on old ones...

164.175 PL 103.5 Hz - could only hear the base side of the conversation. Longest phrase I caught was "pick up a 943 for Atlanta news" - no idea about this one yet.

163.4125 PL 103.5 Hz - brief conversation about reading a rain gauge - my guess is a national forest.

168.775 - very weak, very brief, not enough heard to make any guesses

168.375 PL 103.5 Hz - "I'm about to make an F86 transfer" - I think this may be TVA power line maintenance based on things I've heard before. The signal is stronger at Watts Bar and I have heard them mention Johnson City before.

169.675 - scrambled traffic

169.975 PL 103.5 Hz - This is a national park or forest that has a camp ground (lots of help, isn't it?)

167.6375 PL 167.9 Hz - "I'm coming into Gordon County" - this jives with what Dewey recently submitted.

167.2125 PL 167.9 Hz - very weak signal, I believe he said "The thief is in a public grocery store"

165.0875 PL 88.5 Hz - "check the 700 sprinkler house" - one of my references lists this as "Chattanooga Army Station"

172.95 PL 136.5 Hz - phone patch. Someone attempted several times to dial a phone number; unfortunately I did not have a DTMF decoder hooked up. Each time the repeater would say "connecting line 2" and after the phone patch didn't go through, it said "the system is idle". Am monitoring this one now in case they try again - maybe I can get the phone number.

All these were heard on a BC895XLT hooked to my outdoor Scantenna.

Jim, I have these observations about your post:
168.775-I have monitored Chattahoochee NF on this freq. When last heard (about two years ago up here) input was 168.175 and PL was 136.5
168.375-This is TVA power services. Believe there are multiple repeaters throughout
system as decode tone remains at 103.5 in most areas. Input tone to one up here
(Hawkins or Cocke Co) is 131.8, don't remember input freq.
169.975/103.5-Not familiar with this one but you will find Cherokee NF on 166.925
with 103.5.
165.0875-Could this be Volunteer Army Ammo Plant? It is a large Army facility in
the Chatt area (Tyner).
Yours is the type of post that makes the list worthwhile. Thanks.

I think this must be a NW GA FBI channel. Certainly worth plugging in to
the scanner - I've never heard DVP on this channel.

> 165.0875 PL 88.5 Hz - "check the 700 sprinkler house" - one of my
> references lists this as "Chattanooga Army Station"

Right, that's the Volunteer Army Ammunition Plant. See
http://www.qsl.net/kf4lhp/fed_vaap.html for the complete list (verified
by a source who would know). But, I never showed a PL on it, guess
that's a new development from when the repeaters were moved.

I've been hearing what must be a NF on 411.225, PL 114.8 Hz. I think
it's Chattahoochee NF but can't verify since I don't have a map or
anything... can you advise? Mostly law enforcement traffic but some
occasional maintenance traffic.

49. Book Review

Yahoo group: chattradio
Date: 1998-07-25 04:12:44 UTC
From: Matthew Sadler, KF4LHP
Topic: 49 Message: 49

Well, I've finished reading my latest purchase - Railroad Radio, by Vincent Reh, and here's my review...

A good book. Great for both the beginner, since it covers all the bases, from the equipment and jargon that the crews use as well as what the scannist would use, but is also has a lot of stuff that's excellent for the more advanced user.

The glossary of RR terms is excellent - almost 24 pages of terms defined. If you hear it on the radio, you'll see it in this book!

Personally, I think that more space should have been devoted to both the equipment and usage of said equipment by the railroad, as well as a brief coverage of the landline side of RR comms, expanding the book more from just a radio book to a RR comms book, and less time devoted to the scanner equipment end of it (some 70-odd pages are nothing but scanner and antenna topics).

Overall, I'd recommend it. Good book to have on hand just for the reference data. If anyone out there has any books they'd like to post a brief review on, I'd invite them to do so.

50. Re: VHF federal band activity today

Yahoo group: chattradio
Date: 1998-07-25 11:52:57 UTC
From: TGO1@xxx.xxxx
Topic: 42 Message: 50

Although many NF's like the Cherokee have replaced their UHF links with microwave, it's
possible that some have not. The national park up here still uses UHF, they haven't had
the money to change. Somewhere on the web I have seen a list of GSMNP sites and
their freq's-this is very possibly what you are hearing.
Many years ago the Park had three repeater sites selectable by CTCSS: 162.2, 173.8,
and 186.2. I know because I bought a few of their old Motracs. There is now a voting
system with audio from all sites being voted at Clingman's Dome. The 173.8 encode
tone is the only one used.

I also believe this to be Chattahoochee NF based on using a Yagi once to DF the signal - generally Southwest from here. Also "Master Frequency File" (Tunnel and Kelty, 1994) indicates this freq is in use there. Finally I have heard them mention Dahlonega which is not too far away.

Had an S3 to S4 on the BC895XLT 5 step S meter, so it was pretty strong here. Did not hear any more on it but am planning to set up a tape recorder to catch any further activity. I am not aware of this freq being used at Sequoyah, if that's what you have in mind. Of course, something could get set up there without my knowledge. If that is the case, Watts Bar will probably follow suit, and then I will know about it! Will also call my ham buddy who works at Sequoyah and ask if he knows about anything new.

Ignorant question - are the UHF channels still separated by 6 MHz in
this plan? I seem to remember that DTV takes more frequency space than
conventional TV.

From: Matthew Sadler, KF4LHP
Topic: 58 Message: 58

Has anyone else listened to the 162.500 weather radio out of Fort Payne, AL? It's a computerized voice (and sounds pretty bad compared to the canned audio available on most amateur repeaters nowadays).

Any comments? I think I remember reading something about this, it may have been in Monitoring Times, about public reaction to this being very negative since it was so difficult to understand what was being said.

Had the opportunity today to observe an installation in progress of TVA's newest radio
equipment into one of the TVA police new Jeep Cherokees. T83 Motorola Astro Spectra
radio, Moto S9000 siren/ pa, S9000 PAC-RT system with Astro Sabre portable and Convert-A-Com, portable vehicle amplifier, and low band/high band cross band repeater.
Was told the agency had invested seventeen million $US in a new Astro system, which
means that future comms will be digital and unavailable to monitor unless you want to
buy all this top-of-the-line stuff for a hobby or a charitable donation to "M."
Is it time to sell or give this monster to Duke, Southern Cos., or just shoot it?

Greetings,

I suppose I should introduce myself as the moderator asked us all
to do. My name is
Jonathan Guy, I'm licensed as KE4AIK (Technician Class) on the ham bands.
I've been an
Amateur Radio Operator since April 20th, 1993 when I received my ticket
in the mail.

I've been a "scannist" since about 1985 when I bought my first
scanner, a Radio
Shack PRO-30, 16 channels, programable, handheld.

Now on to the matter at hand. Does anyone know of a talkgroup lower
than 16432 or
higher than 18768 on the City of Chattanooga Trunk System?

Here are the NOAA wx broadcast locations I can monitor from here in
Brasstown, NC.

162.400 GA NOAA weather WXK52 Chatsworth (Peachtree City office)
162.425 TN NOAA weather WFF84 Lawernceburg (Nashville office)
162.450 AL NOAA weather WWF66 Cullman
162.475 TN NOAA weather WXK46 Knoxville (Morristown office)
162.500 AL NOAA weather WFF44 Shelby County Airport (Alabaster/Ft. Payne)
(Birmingham office)
162.525 AL NOAA weather WFF54 Auburn
162.550 TN NOAA weather WXK48 Chattanooga (Morristown office)

We do get a variety here. Next December we shoud be getting our own NOAA wx
broadcasts station in Murphy (10 miles away) NC. The Nantahala Electric
bunch is footing the bill. I heard that it will go up on Johanna Bald and
operate on 162.525 MHz. I will let all know when it comes on line.

From: Saul Chernos <schernos@...>
Subject: [AmFmTvDx] Attn. Chattanooga TN DXers

I have indirect word from a Chattanooga, TN pirate operator, Lorenzoe Ervin,
of a station calling itself Black Liberation Radio, that he has received
mail from the FCC threatening arrest, equipment seizure, and possible
loss of his home for broadcasting.

I don't know the frequency, but I would guess it's FM. I seriously doubt
shortwave, because there has been at least one other Black Liberation
Radio, in Illinois, and that was on FM.

So DXers in the Chattanooga TN area might wish to do some band scans as
soon as possible. The station may not be around much longer. If anyone
hears the station, I'd be interested in knowing the frequency.

Lorenzoe Ervin's pirate station has been broadcasting at FM 88.5 Mhz. The station obviously doesn't broadcast 24 hours...I've only heard him on during "drive time". NewsChannel 9 did a story about his pirate station a few months ago and I haven't heard his station on that much since then. I'm not sure how much power he was running, but I lost the station when I got to Morrison Springs on Corridor J.

Here's the original Press Release on this subject:

ACTIVIST CREATES RADIO STATION

Lorenzo Ervin now has a radio station, right in his front room. The 40 watt
FM station is on the air everyday from 4:00 pm weekdays to 12:00 at night on
88.5 MHz. Ervin says the unlicensed station is one of about 1,500 such
stations that the government calls "pirate", but he and others doing it call
"free radio". He says the creation and the running of the station is a form
of "electronic civil disobedience" by those who feel that the people own the
airwaves, not the government or large media corporations. He says freedom of
speech is a "fiction" in todays media environment, where one media company
can buy and own numerous other radio and tv stations in a local market. He
says the low-power free radio, unlicensed stations are a way for the little
guy to be able to speak up with controversial opinions rarely heard on
commercial radio or other licensed broadcast media. He also says that
Chattanooga has a "controlled media" which has prevented him from speaking
freely on a number of issues, and which unfairly lampoons him as a "jerk",
"troublemaker" and "extremist" in the local media.

The station, known as Black Liberation Radio or "88.5 FM Chattanooga Free
Radio", is not known by most of the city, and may not reach every
neighborhood of the city, but it does reach most of the inner city of
Chattanooga, and has been heard as far away as Rossville. Ervin says that
this is primarily "neighborhood radio", and that it has no commercials, but
that it will receive donations and are considering "sponsor underwriting"
from small businesses, like public radio stations such as WUTC do now.

Ervin says that this is a real radio station, not a hobby and that it
broadcasts sixty-eighty hours a week of hip hop, soul, blues, R & B, and
other styles, some of which are unique or hard to find like Jungle, Drum &

Bass,techno, SKA, and Chicago House music, and dancehall Reggae (aka Dub). Ervin says he brought most of the music while in countries like Australia, England, Ireland, Belgium, France, Holland, Canada, and in big cities like San Francisco, New York, and Atlanta while he was on speaking tour last year. He says he does a two-hour daily talk show, The Rest of The News" from
4-6 each day which deals with "those issues that the political establishment
would rather avoid or cover up", where he says he and a frequent co-host "exposes" and analyzes news items for the audience. Who listens? He admits he doesn't know how big his audience is or who they are. They rarely call in, but he is sure that they are taking it in, and that's good enough for him. He says the Saturday rap music show, "Rap N' Revolution", hosted by Mikail Musa Muhammad, is already the most popular black music show in the city, and the only place for "raw, real, radical hip hop music". He says plans are in the works for the station to be put on the internet and to go out on shortwave radio by the end of this year.

Ervin says overall the "pirate" radio station is unique, controversial, and
is a "political organizing tool" for his fledgling political movement, Black
Autonomy-COPWATCH, which staged a demonstration at city hall last month, where he and two other members were arrested. Ervin is a well known local activist gadfly, controversial political speaker, international roustabout,
and now talk show host and radio station owner. What next from Chattanooga's
most controversial and interesting figure?

444.700 -- THE OARS GROUP RETURNS TO AIR WITH "NEW" COORDINATED
FREQUENCY OF 444.700
WITHIN NEXT COUPLA WEEKS.....
FROM WHITE OAK MNT SITE BETWEEN CHATTANOOGA &
CLEVELAND.
WILL EVENTUALLY INCLUDE LINKS

443.150 -- KD4EHC HAS A TEMPORARY CROSSBAND REPEATER IN EAST BRAINERD
NEAR THE MALL. 147.555 178.3PL INPUT TO 443.150
OUTPUT
FULL TIME UHF REPEATER WILL SOON AIR FROM THIS SITE ON
443.150 178.3PL
CROSSBAND INPUT WILL GO AWAY AND LINKS TO 6/2/220 WILL
SLOWLY COME
ONLINE

224.780 -- CARC HAS REPLACED 30+ YR OLD CLEGG REPEATER WITH NEW UNIT.
SOME OF DESENSE & INTERMOD REMAIN BUT COVERAGE IS
IMPROVED.
LACK OF EQUIPMENT ON BAND MAJOR PROBLEM. 220 HT'S ARE
NOW
AVAILABLE...MAYBE MOBILES SOON.

NOTE: IF YOU MISSED THE ICOM FUNMOBILE IT WILL BE BACK IN OCTOBER
FOR THE CARC HAMFEST ON THE 31ST.....8500 & R10 WERE
GREAT...
HOPED TO TRY THE NEW R2 BUT THEY DIDN'T HAVE
ONE...IF IT
IS LIKE THE Q7 HT IT MIGHT BECOME A GREAT STEALTH
SCANNER
MAY EVEN GET THE FOLKS FROM GROVE TO COME
TOO.....

One only has to invite, we'll talk terms, we show up and talk up a storm. Both Bob and I do speaking engagements on a wide variety of topics from after dinner stuff to your basic one hour ham seminar material on just about any type listening or technical stuff you would want. Bob does the techie type stuff (antennas and such) and I'm known as the freq guy. ;-)

Like I said, it never hurts to ask and the CARC bunch never has asked us to speak in all these years. Clevealnd ARC did for one of their meetings and Bob goes to speak at one of the Knoxville ARC meetings each year and I have traveled as far east as Hickory for the ARC meeting once but so far no Chattanooga. ;-(

Hmmmm...I wonder how these companies will be effected when (if?)
Hamilton Co EMS
begins providing service to East Ridge?

Did you know that Med-Tech has closed their doors? That means that if
you need an
ambulance in East Ridge, you can't be transported by Hamilton County EMS
if you're still
alive, but HCEMS will pick you up if you died since they now do all
transports to the
Forensics Center....

Article in Asheville paper had feds planting remote listening devices in the woods looking(listening?) for eric.
Years ago read article in POPCOMM about Vietnam era system planted along trails by recon patrols.
Vibration sensors connected to 1/2w lowband xmtrs. Feds must be using next generation stuff with output
in milair band possibly.. Any ideas as to freqs? Clear voice comms keep calling for "TOC"?
Tech Ops Center? Several news reports have shown the "white trailer" when mentioning comm problems
in deep woods. Many days the coordinator at LZ stays in clear all day long, providing limited look at teams
in field aned their rotation out. News last nite had copycat individual killing two campers and fleeing into woods
vowing not to be caught just like eric. Rent on mountain cabins in Montana must be going thru the roof. haha

78. 172.95

Yahoo group: chattradio
Date: 1998-08-07 21:49:42 UTC
From: Jim Knight
Topic: 78 Message: 78

Two weeks ago I posted a message which among other things mentioned a phone patch attempt I heard on 172.95. Yesterday I set up a tape recorder to monitor the frequency all day. Had the stock antenna on the scanner and nothing was received. Today I hooked up my outdoor antenna (which I was using when I heard the phone patch attempt two weeks ago). Several times during the day, a brief CW message was broadcast. The message was "DE FTYSFU". There was no conversation, phone patch attempt, or anything else besides the CW message. I played the tape numerous times to be sure I was copying it correctly. When I heard the phone patch attempt two weeks ago, this message was also sent at the end of each transmission, but I was so busy trying to grab a tape recorder and/or DTMF decoder that I didn't copy the CW message. Now that I have copied it, it's still a mystery to me. Anyone have ideas or speculations about this? Technical notes: received on a BC895XLT hooked to an outdoor Scantenna. I don't know enough about the IF's on this radio to speculate on possible image reception.

Okay...wild shot in the dark...probably wrong...but still...

Based on your earlier message that referenced the "connecting line 2"
repeater voice, I'm wondering if the repeater was hung up on line 1, or
just plain having problems since it never went through (or so I gather
from your message)...My Radio Shack GRE built scanners have an IF of
10.7 or 10.8 and I'd say the 895 is probably right around there too.

I don't know how much you know about railroad PBX systems, but Norfolk
Southern uses a PBX in this area of 160.275 output and 161.145 input.
This one may be a little far off to be what you heard, and it is
an ACTIVE frequency. CSX (the have a railyard in Tiftonia) has a PBX
with an output of 161.265 and input of 160.395...if you figure the
CSX on 161.265 + IF of 10.8 you get an image on 172.065 (did I do that
right?) Granted it isn't 172.95, but if your IF is just a little
different from "normal" it could happen...

I have no idea what the CW ID would have to do with railroading tho...

Interesting note: both this channel and 855.7375, the city's MDT
channel, have a PL of 94.8 Hz, which I've confirmed with two different
radios. Wonder if the MDT repeaters come with a default PL of 94.8 Hz?

I'm not 100% certain that it is an MDT, (NS System) but it is computer
data, and
in short bursts like an MDT. That is interesting about the PL...I had
no idea the city ran a PL on the data channel

Yeah, right near where US 411 crosses the Hiwassee River... maybe a mile
east or so.
TVA Police is up there often because they have the Apalachia Powerhouse
upstream as well as Apalachia and Hiwassee Dams...

Either TVA Police or a USFS relay, probably TVA since FS has gone to a
microwave backbone now.

88. MedComm

Yahoo group: chattradio
Date: 1998-08-16 15:48:25 UTC
From: Matthew Sadler, KF4LHP
Topic: 88 Message: 88

Hello everyone... from Cookeville, TN!

MedComm either is or will soon be in operation, so I thought it'd be appropriate to post this information...

MedComm is for the use of ambulances, ground or air, transporting patients to the following hospitals in the Chattanooga area:
- Columbia East Ridge Hospital
- Columbia Parkridge Medical Center
- Erlanger Medical Center
- Erlanger North Hospital
- Memorial Hospital
- Memorial North Park Hospital
- T. C. Thompson Children's Hospital

Ambulances will call into MedComm on either state EMS (155.205) or Med 9 (462.950) and will then be sent to trauma control (155.280), HEAR (155.340) or Med 1 (463.000) to talk to the appropriate hospital. If the patient report channels are in use, the ambulances will be held on the routing channels. In the future, plans are for MedComm to operate on a 800 trunk system.

For more information, check out their web page:

http://www.lzontheweb.com/medcom/index.html

Topic: 92 Message: 92

After traveling around the net over the last couple of days to look at the various hurricane list out there, I've decided an update is definitely in order.

I just got off the phone with one of the pilots at the 53 WRS and interviewed him regarding the frequencies they are using for comms during their missions. Here is the scope.

The 53 WRS uses the "Teal" callsign when they are on their hurricane hunter missions. When they are on an airlift mission they use "Hobby." The Swan and Gull callsigns are NO longer used.

Yes, they do use UHF milsat for DATA ONLY comms (no voice). I doubt it would be worth the time or energy to attempt to monitor since the Vortex and Recco messages sent via this data circuit are widely available on the net within minutes after they clear the aircraft.

From the HH website:
"A key part of the WRS is its ability to send data instantaneously via military satellite directly to the forecasters at the National Hurricane Center in Miami, or to another transceiver at Keesler Air Force Base, or a portable station which moves with the Hurricane Hunters wherever they go to chase the storms. The weather officer can also send written messages to the forecasters and staff on the ground, providing details of the storm and coordinating the mission."

They use primarily three HF nets for comms in addition to their normal VHF/UHF civilian/milair stuff.

GHFS: According to Colonel Peterson they use this when they need to talk to Miami or Keesler, etc. Look for them on the primary GHFS frequencies of 4724, 6712, 6739, 8968, 8992, 11175, 13200, 15016, and 17976 kHz. If the comms last any length of time or traffic is heavy they could move to a GHFS discrete, so listen for that frequency to be passed by the GHFS ground station.

MWARA: Used by the pilots for air traffic control purposes. Depending on where the storm is will determine which MWARA will be used the the HH folks. You will primary catch them on the NAT or CAR freq families and when they are working the East Pacific storms look for them on the CEP family of freqs. According to the colonel they are using St. Croix in the Virgin Islands for a forward base in the Atlantic and Hickam as a forward base in the Pacific.

For an excellent list of HF MWARA channels a visit to WUN's Tony Orr website is a must. The URL is http://patriot.net/~jetset/hf.html.

The third HF net that Col Peterson said they use, but rarely is the US Air MARS phone patch net. Some of the freqs that have been reported include: 7633.5 and 13927 kHz.

Bob Wyman and Allan Stern have been providing excellent coverage of the VHF/UHF freqs being used down their way and those freqs have also been confirmed by Col Peterson.

As for the Air2Air that Bob asked about I think the 304.8 is it. However, you might also want to check the following: 381.0, 283.7, 349.4 and 385.9 MHz. One of these could prove productive.
Those of you within Keelser UHF range should watch the 53WRS CP freq of 349.4 MHz for comms. That freq was in use the last time I was down that way.

Be sure to visit the 53 WRS website which has lots of great information at:

http://www.hurricanehunters.com

Have a great time out there and good hunting.

Topic: 93 Message: 93

As Hurricane Bonnie and now the newly formed Hurricane Danielle might affect the coastal mainland of the U.S., the Hurricane Watch Net will begin on 14.325 MHz on 20 meters. Listen here for reports from amateurs near and within the effected areas. For more information about the Hurricane Watch Net, please visit the ARRL webpage and search under hurricane.

94. New Radio Station

Yahoo group: chattradio
Date: 1998-08-25 17:27:23 UTC
From: Chris Palmgren
Topic: 94 Message: 94

A brand new commercial radio station has hit the air. WOCE, Ocoee 93.1 FM, signed on last weekend. The station's output power is 6,000 watts and transmits from a location that has the highest antenna location for a commerical FM station between Knoxville and Signal Mtn., TN. The transmitter is located off of Hwy. 64. The station is licensed to the city of Benton, TN, but says Benton/Ocoee/Cleveland on the air. Ocoee 93.1 has been heard as far north to just south of Knoxville and as far south to the northern suburbs of Metro Atlanta. Ocoee 93.1's studios are located in Cleveland, TN.

Ocoee 93.1 targets a professional audience playing a mixture of adult contemporary favorites of the 70s, 80s, and 90s.

The station will carry all Univ. Of Tennessee football games, as well as Lady Vols basketball. Vol Calls will be aired every Monday night.

The station's drive time on-air personalities will be familiar with those who have listened to Chattanooga radio in the past. Dale Anthony who was very popular on WFLI radio in the 60s is the general manager.

If anybody is interested in obtaining more information on this station, there is an article in last Sunday's Cleveland Daily Banner under the business section.

From: Jim Knight
Topic: 95 Message: 95

I have written a C program which sorts a list of US Amateur callsigns alphabetically by callsign suffix. It was written for Microsoft Visual C++ 5.0 but should work with just about any C compiler. If anyone wants the source or the executable (runs at DOS prompt under Windows 95), send me email and I'll send you a copy.
I also have two programs for trunktracker users. One will print all the valid talkgroups in any of the preset fleetmaps for type I systems. The other will print a user defined fleetmap given the size codes for each block.

Does anyone know what talkgroup 17904 on the Chattanooga system is?
Heard it today; discussion of a building being demolished and whether or
not the electrical wiring was still hot.

Yeah, I believe this is the building inspectors... hadn't heard them at
all this summer on the old 155.805 repeater; they probably switched
over.

Reply from below:
the chattanooga tg 17904 is the inspections department. I would also suspect we'll see and hear more talk groups opening up over the next few month, since the city wants to move all two way stuff to this system. Public works will probably be going next.

Also, the city police is about to complete their redrawing of the beat districts. Should be wrapped up by mid September. I did sit in on the last 911 board meeting. CPD is going to hire 12 new communications specialist, add at least four work stations for call takers, and add two dispatch consoles for two more dispatch positions. This may result in a new dispatch talk group. Right now, they just have an ADAM and BAKER dispatch channel. CHARLIE channel could be used as a third dispatch district. This is all supposed to be completed within next three months. It's possible to have ADAM channel be for ALPHA team, all north of river stuff including Hixson. BAKER channel could be for downtown, southside and highland park. CHARLIE could be for everything east of ridge, GEORGE team for Brainerd East Brainerd.... lets wait and see how they reconfigure things... could also mean activation of other TG's so that each district has a car to car channel.

Does anybody know about a new 800mhz system on Lookout Mountain? Been monitoring four freqs that share data channel. 853.1875/854.1875/853.9875/854.5625. Sheriff's in Dade/WAlker Counties say it's not theirs. I can't imagine yet another SMR system??? No activity yet, came on line about three weeks ago. HELP!

Finaly: Construction on the third 800mhz tower for the Chattanooga/Hamilton County system will begin in September. (primary site is on the Tenessee American Water tank on N. Bragg Street Lookout Mountian. The Signal Mountian site is on the water tank directly behind the Signal Mountain Town Hall) The third site will be on White Oak Mountian, atop the fire tower on the ridge south of Mahan Gap Road. If your on Ooltewah Ringgold Road, just south of Mahan Gap Road, you can see the fire tower. It's in the middle of several other towers, cellular and a couple that support the coutiy's uhf/vhf systems. It should enhance coverage on the eastern side of Missionary Ridge, Ooltewah, Collegedale, East Brainerd, up to Birchwood, over to Soddy Daisy and Middle Valley. There will be some gaps in extreme northern Hamilton County. Once White Oak is operational, engineers will find the best site in Sale Creek to complete system with fourth tower. Once White Oak is up, Hamilton County Emergency services will determine if they can go ahead and make switch. The cost of portables just came down dramatically. It would have cost about $2,500 each. Motorola has a brand new unti out costing 900 bucks. If Emergency services likes them and the third site, all services now on vyhf will go 800. County will buy radios for personnel and volunteers. Sheriff John Cupp is also anxious to get on system. If everything works as planned, by next Riverbend everybody could

be on same wavelength.

If anybody has a sneak peak at new talk groups assignments, or even the hex codes, pass them along!

And if anyone has info about next generation of trunktrackers, would like to know too! Thanks to everybody with fed freq info.
...JPL

PS. Georgia has a new UHF repeater that rebroadcasts all stuff on State Sheriff's Network. It is 453.4625. It repeats all traffic on 154.935. Gives great coverage of entire northen half of state! Not sure yet where it's located, I would guess Lookout or Fort Mountians? Wonder if there's a repeater for the other state channel 154.905 car to car??? ...jpl

What about Catoosa Co? I can hear the data channel in E. Brainerd
(not far from
Hamilton Place) but it is a little weak. I guess that'll mean decent
coverage but
maybe spotty...the Erlanger Trunk System isn't that good out here around
Erlanger East.

Still leaves the question about paging for all the Volunteer Fire Departments.
Even under the present radio system most Volunteer Fire Fighters only have vhf pagers
and not a 2 way radio when "off duty"...what about the Tri-State Mutual Aid Fire network?
would all the various VFD equipment have to maintain 2 radios per truck?

>And if anyone has info about next generation of trunktrackers, would like

I've been told that Radio Shack has a new 2000 channel scanner in the pipeline, I guess
it replaces the PRO-2035/2042 that have been discontinued. GRE has manufactured the best
of the Radio Shack scanners for years (PRO-43/60/64-2004/5/6/35/42 etc.) and I hope this
is the newest GRE offering with trunk-tracking. Uniden got the jump on GRE with the TrunkTracker, but GRE is back in contention with thier partnership with Optoelectronics and the OPTOCOM receiver with Motorola 400/800/900 Tracking and LTR systems.

Here's to hoping for a real beast that will track more than one system and conventional
radio all at one time by the first of the year (optimistic aren't I?)

THE ERALNGER SYSTEM IS VERY LOCAL FOR NOW. IT WILL BE INTERFACED WITH THE
20 CHANNEL COUNTYWIDE SYSTEM IN THE NOT TOO DISTANT FUTURE. PERAHPS THE
WHOLE SYSTEM WILL INVOLVE 25 CHANNELS? I HAVE SPOKEN WITH PEOPLE FROM
LIFEFORECE, WHO ALSO OPERATE THE NEW MEDCOM CENTER. LIFEFORCE OPERATIONS
ARE SUPPOSED TO GO 800 BY THE END OF THE YEAR.

SEVERAL WAYS THIS CAN BE OVERCOME, BASED ON WHAT'S HAPPENED IN OTHER STATES/COUTNIES. FIRST, THE 154.280 MUTUAL AID NET CAN BE SIMULCAST ON AN 800 TALKGROUP.

AS FOR PAGING, THE PORTABLES NOW IN USE HAVE PAGING OPTION. CARTA USES THIS SYSTEM. A CODE CAN BE KEYED IN, AND ACCORDING TO THE LIST FOR THAT PARTICULAR PAGE, A FLEET OF RADIOS IN A STANDBY MODE PICK UP THAT SIGNAL OFF THE DATA CHANNEL, THE RADIO BEEPS JUST LIKE A PAGER. AN ENTIRE FLEET CAN BE PAGED, OR JUST ONE PARTICULAR RADIO CAN BE ALERTED. IF THEY KEEP THIER OLD VHF PAGERS, THAT PAGING CHANEL CAN ALSO BE SIMULCAST AN 800MHZ TALKGROUP. THE VHF PAGER GETS ALERT AND VOICE INFO AS USUAL, BUT THE CHANNEL ALSO GOES OUT ON 800. SO IF A VOLUNTEER KEEPS HIS PAGER IN MONITOR MODE, HE NOT ONLY HEARS THE DISPATCHER, BUT WILL ALSO HEAR ALL MOBILES BEING REPEATED. THIS SYSTME IS USED IN MOST AREAS WHERE VOLUNTEERS PROVIDE SERVICES. KNOXVILLE IS A GREAT EXAMPLE. THE 800 SYSTEM WILL ALSO ALLOW FOR A SIMPLEX CHANEL, SO THAT WHEN UNITS GO INTO AREAS (SUCH AS SEARCH RESCUE) THAT DON'T HIT 800 TOWERS, THEY HAVE GOOD GROUND OPS. CHATTANOOGA'S SWAT TEAM USES THIS ALREADY. THEIR SWAT 1 IS TALKGROUP 16880. SWAT 2 IS SIMPLEX 856.9625. I WOULD IMAGINE AS EVERYONE GOES ON LINE, SOME OTHER CHANNELS WILL BE RESERVED FOR SIMPLEX GROUND OPS.

THE BEAUTY OF THE 800 SYSTEM IS THAT IT CAN DO WHAT OLD SYSTEMS DO, BUT JUST BETTER. MORE OPTIONS, ETC. THE ONLY DOWNFALL IS THAT THE 800 SIGNALS NEED MORE TOWERS TO WORK IN ALL THIS HILLY TERRAIN. SIMPLEX CHANNELS SOLVE THAT PROBLEM. MOST 800 PORTABLES HAVE 48 MODES... PLENTY OF CHANNLES TO WORK WITH. WE CAN BE THANKFUL WE LIVE IN HILLY AREA... THIS WILL LIKELY KEEP PUBLIC SAFETY FROM GOING ALL DIGITAL. IN ANOLOG SYSTEMS, WEAK SIGNALS STILL GET THROUGH, ALTHOUGH SCRATCHY. IN A DIGITAL SYSTEM VOICE IS CONVERTED TO 1'S AND 0'S... IF THE SIGNAL ISN;T CLEAN, IT DOESN'T GO THROUGH AT ALL. DIDGITAL IS ALL OR NOTHING.

1. Chatt system is already digital......everything on the mtns is
Moto Quintar Digital dumbed down w/ analog cards.
With new software both consoles / repeaters / micro can go
APCO 25 Digital.....now!
only thing is radios...unsure if 3000's can operate like
digital cellphone and shift between
2. Charlie channel is already assigned & programmed in most
radios now.
Don"t hold your breath waiting for new "TAC" channels
anytime soon.
When SO comes online will get system reprogramme on city
radios \
3. Simplex...yes..other people too...plus watch national LE
Mutual 800 channels for fed/interagency ops
Used at some fed sponsored special ops training seminars so
everybody can play together......
Simplex or Talkaround/Conventualll
.......w/"nationwide" DVP code????

108. Hurricane Bonnie Freqs

Yahoo group: chattradio
Date: 1998-08-27 13:28:35 UTC
From: Larry Van Horn
Topic: 108 Message: 108

First, I would like to thank all of the folks who have called us here in Brasstown the last 24 hours concerned for our welfare. We are located about 580 miles inland from the coast in the western North Carolina mountains and other than some high level cirrus clouds, we all are safe and out of harms way from Bonnie. We all here at Grove deeply appreciate the concern and thank you all for your well wishes. Let's hope that our fellow Carolinians along the east coast aren't to hard hit. Our prayers are with them.

Now for some confirmed freqs to hear hurricane Bonnie activity on.

Army MARS has been part of a SHARES Level One alert (CAM 48-98) on primary and alternate freqs (primary and alternates have been shifting based on propagation). These freqs are as follows:

5236 kHz Channel 1
14396.5 kHz Channel 2
4490 kHz Channel 3
5711 kHz Channel 4
9106 kHz Channel 5
11217 kHz Channel 6
15094 kHz Channel 7
17487 kHz Channel 8

Digital SHARES operations (AMTOR/PACTOR/G-TOR) have been heard on the following freqs:

6800 kHz Channel 9
13242 kHz Channel 10

A small amount of activity has been reported on 13996 kHz USB (Army MARS primary guard freq). You might want to keep an eye peeled on 6999 kHz LSB (Army MARS alternate guard freq). I haven't taken a swing through the USN-USMC and USAF MARS channels but no doubt those have been busy as well. Those freqs have been well documented in the Utility World column in MT over the last few years.

The Hurricane Hunters have been using 11175 kHz USB (USAF GHFS) quite extensively for phone patches to various media outlets (i.e., Weather Channel, TV and radio stations). Other GHFS primary channels include: 4724, 6712, 6739, 8968, 8992, 13200, 15016 and 17976 kHz. If the comms last any length of time or traffic is heavy they could move to a GHFS discrete, so listen for that frequency to be passed by the GHFS ground station. 11181 and 13204 kHz (USB) are two of the GHFS discretes that have been reported in the last 24 hours.

Another HF freq to watch is 10780 kHz (Cape Radio at Canaveral). With the off shore debris recovery forces looking for Titan IV and now Delta III

rocket debris this could be an interesting freq to watch (Danielle is heading this way).

For the scanner enthusiasts alomg the coastal areas: 122.925 and 304.8 MHz (AM) have been used by the NOAA aircraft and 123.050 MHz (AM) have been used by the NASA aircraft particpating in a special experiment (CAMEX 98) to research these storms (special thanks to Bob Wyman and the guys down in the sunshine state for following this activity).

The US Coast Guard, as you might expect has been real busy. Activity has been reported on 381.8 MHz (AM), and on HF: 5696 and 8983 kHz (USB)

The Hurricane Watch Net is operating on 14325 kHz (USB). The Hurricane Watch Net members provide ground level meteorological reports to the National Hurricane Center.

ARRL section officials in the affected areas have announced the following regional HF net frequencies to handle emergency-related traffic (all freqs using LSB):

South Carolina: 3915 kHz
North Carolina: 3923 kHz (7232 kHz alternate)
Virginia: 3910 kHz (7260 kHz alternate), with health-and-welfare traffic on 3947 kHz (7240 kHz alternate).

According to an ARRL bulletin the Virginia Department of Emergency Services communication
supervisor has asked RACES station W4ZA at the state EOC to activate. The Virginia Emergency digital net will be on 145.730 MHz (packet). The Virginia Area A Tactical net (Williamsburg repeater) will be on 146.760 MHz (NFM) (-600 kHz).

With Hurricane Danielle heading in on the heels of Bonnie, these freqs will probably be active again. More as we hear it.

Seems the folks who were in town to upgrade Catoosa Co. 911 to E911 had
to make a call themselves.
Last nite while staying at the Ringgold Best Western somebody stole the
$5,000 upgrade to the
Catoosa 911 system they were in town to install over the
weekend.....

I'm showing this to be one of a few Georgia Forestry Commission
channels, this one is listed as base to air. Others include:

159.225 - F6 repeater (NW GA)
159.285 - Air to Base
159.360 - Point to Point

GA DNR has a new repeater on 151.460 on Lookout Mtn and one on Fort Mtn
(I think, can't remember the frequency), they may be using the forestry
channels too.

Larry,

What clued me in to this being GA Forestry was the "Rome" identifier,
since Rome is well within listening range of Chattanooga...

Found the new AMR ambulance(Erlanger Health System) talk group ID code.

It's 204-1, on the 20 channel NEXTEL SMR System.
For those who have forgotten, the freqs are:
856-865.0125 (10 frequencies here)
856-860.5125 (5 frequencies here)
860-865.3875 (5 frequencies here)
** Again, use fleetmap 8**

Also, on the 22 channel Communications & Electronics SMR system, the talkgroup 23-1 is active with an EMS Service. Used to be Chattanooga Ambulance. They were aquired by Memorial EMS...stopped using the system some time ago...who could it be?

One final EMS note. Whitfield County GA uses 155.160. You can hear mobiles/portables repeated on 458.725 clear as day. Works kinda like Memorials system (vhf 155.325-- mobiles repeated on 460.625, base on 465.625)

Did find the source of the 453.4625 repeater system It';s licensed to City Of Rossville. This repeater spits out traffic on the Georgia Sheriff's NET 154.935....gives great coverage of North Georgia stuff. Rossville is also licensed for 460.625.. this repeats fire mutal aid 154.280 I think...If not mutial aid, some other fire channel with distant traffic.

Couple of random notes...

155.16 is also the National Cave Rescue Freq and Walker County
has a repeater output on it as well. It was setup by Cave
Rescue years ago...

At one time Rossvile Fire Chief was talking about pulling out
of E911. Don't know if this is still hot, but maybe they are
setting up a system just in case. (453 meg)

From: John Pless
Topic: 118 Message: 118

The 22 channel SMR system used by Communications & Electronics has a tower on Lookout Mnt, and has at least one other I think on Bean Mnt, covers Bradley/McMinn/Polk counties. A few of these freqs are just for those areas... at least half of them are active in Chattanooga. So far, no phone patches heard. Use fleetmap 8, type 1 system. Enter all 22 freqs for full region coverage. You'll hear plenty of wrecker services, taxis, private EMS, you name it. Hundreds of users!
851.0125, 851.0375, 851.1875, 851.2125, 851.2375, 851.2875, 851.3375, 851.5875, 851.8375, 852.6375,
852.9625, 853.0125, 853.8625, 854.0875, 854.1375, 854.3125, 854.7375, 861.2125, 862.2125, 863.2125, 864.2125, 865.2125.

*** DOES ANYONE HAVE ANY INFO YET ON NEW TRUNKING SYSTEM IN OUR AREA? I THOUGHT IT WAS OFF LOOKOUT, BUT NOW I'M INCLINED TO THINK IT'S COMING FROM SOMEWHERE ELSE? FREQS ARE 853.1875, 854.1875, 854.9875 AND 854.5625. THESE ARE ONLY CHANNELS I'VE HEARD SO FAR, DATA CHANNEL HOPS AMONG THESE FOUR. I WOULD SUSPECT THERE ARE MORE FREQS. HAV'NT HEARD ANY TRAFFIC ON THEM YET, SINCE THEY WENT ON LINE A MONTH AGO. DADE, WALKER COUNTIES IN GEORGIA SAY IT'S NOT THEIR SYSTEM. HELP!!!!

GSP around Metro Atlanta has been analog 800 for 4
or 5 years now. There has been a plan in
the works but no $$$ to build an 800 state wide.

The 800 system GSP used in Metro Atlanta is/was shared
with Fulton County PD and Atlanta PD.

I can recall the days when both Chatt PD and Atlanta PD
were on the same 460 Meg channels and every couple
of years or so band conditions would be good that
the dispatchers would hear the others traffic on the
repeater output for an hour or so. They would ask who
was on THEIR channel..

John: Which web site did you see the info on?
I took a quick look on the DOAS web site but
didn't see anything.
http://www2.state.ga.us/Departments/DOAS/index.html

Unless it has changed, the DOAS would be the guys building
any state radio system.

Topic: 128 Message: 128

THE CITY OF RED BANK HAS PURCHASED 800 MHZ RADIOS. POLICE (AND MAYBE FIRE, NOT SURE YET) WILL BE GOING ON LINE SOMETIME IN NEAR FUTURE. THEY WILL HAVE TO PURCHASE AN $1,800 UPGRADE FOR THE CONSOLE DESIGNATED AS "RED BANK" AT THE SHERIFF'S DEPARTMENT SIDE OF THE 911 CENTER. SO KEEP YOUR EARS OPEN FOR NEW TALKGROUP ID'S.

ON ANOTHER NOTE. THE CITY OF EAST RIDGE IS FINALIZING IT'S STUDY ABOUT WHAT TO DO WITH THIER 911 SYSTEM. SHOULD HAVE DEFINITVE WORD IN ABOUT TWO WEEKS. NEGOTIATING W/ SHERIFF CUPP. ONE PLAN, WOULD BE TO MOVE ALL 911 OPS OUT TO CENTER ON AMNICOLA, AND SHERIFF'S DEPT WOULD HANDLE DISPATCHING, JUST LIKE IT DOES FOR RED BANK NOW. THE OTHER OPTION WOULD BE TO KEEP CENTER AT EAST RIDGE, AND GET THE 911 BOARD TO PROVIDE FUNDING FOR SYSTEM UPGRADES TO CAD, AND 800MHZ. FOR MANY YEARS, EAST RIDGE RESIDENTS HAVE PAID THE 911 FEE ONM THEIR PHONE BILL, BUT GOT NOTHING IN RETURN. IT APPEARS EAST RIDGE IS LEANIGN TOWARD AGREEMENT W/ SHERIFF'S DEPT. THE ONLY STICKING POINT, IS MAKING SURE CURRENT EAST RIDGE DISPATCHERS CAN KEEP THIER JOBS AT THEIR CURRENT SALARIES. REGARDLESS OF WHAT HAPPENS, EAST RIDGE IS MOVING TOWARD 800MHZ... FOR BOTH POLICE AND FIRE. HOPE TO KNOW MORE IN COUPLE WEEKS... AND AGAIN, KEEP ERAS OPEN.

SPEAKING OF WHICH, ANYBODY LISTENING TO NEW TALK GROUP 18832 ?? CAN'T FGURE IT OUT. THOUGHT IT WAS PUBLIC WORKS, THEN I HEARD MENTION OF BRUSH TRUCK LOADING UP W/WATER. IS THIS A FIRE TALK GROUP, OR SANITATION DEPT??? HAVE ALSO HEARD MIC CLICKS ON 18864.

LATER...JPL

I guess things like E911 dispatching has gone full
circle. A few months back Rossville PD/FD was talking about
pulling their dispatch out of Walker E911. Have not heard
any fresh news lately.

Update: Red Bank Fire will NOT go 800 this year. They will remain on VHF 154.325. That switch to 800 won't happen until the whole county is up and running, and all depts. have the capability. About the police side... City Manager Ron Darden says the purchase orders for the radios were signed today... he expects to be on line in a month.

My feeling on all this is that you can expect the small town police
departments to switch over to 800 before fire, and that there should
still be use of the VHF channels by fire for mutual aid operations...
bear in mind that when and if East Ridge switches over, they do a lot of
automatic mutual aid with Catoosa.

From: TGO1@xxx.xxx
Topic: 124 Message: 138

John:-
I think the essence of the message was that I am still monitoring GSP or some agency in Atlanta Metro using the VHF 155.910. It is too far up here to decode the
Pl which I remember was 192.8 but the voice was intelligible. Maybe the switch to
a newer system is not total.

I actually get three agencies here in B-town on 155.910.

GA WYV423 State Patrol Post 9, 46 and 47 dispatch repeater output (in
155.190)?Atlanta Metro area posts (110.9 tone) (CW ID)

NC KTI759 Macon County sheriff dispatch input (out 154.785)?Franklin (151.4
tone)
<channel 2>. Heard Macon county dispatcher call Jackson county dispatch here
and IDed as <channel 2>

TN WNJS635 Cumberland County sheriff dispatch repeater input (out
155.070)?Crossville (131.8 tone)

I've also heard another unid agency (COR no tone noted). During the
transmission a unit told dispatcher to switch to high band to run 10-27.

Well, that is it from B-town. Hope it helps.

Anybody have any details, specs etc about trunking in the 220mhz range?
There are two systems I know of licensed for towers atop Signal Mountian.
Both are 5 channel systems. Since I don't have 220 capability, anybody hear
anything there. Spacing between mobiles and repeaters in 1mhz... try around
220- 222. I'd be curious to hear if anyone is on these!

There is a very strong signal on approximately 220.615. It sounds like
a data stream and never seems to take a break. A control channel
perhaps? That's all I've heard so far.

142. Low band VHF skip

I have heard lots of Spanish and possibly Portuguese today on the following freqencies:
29.95
30.22
31.38
32.76
33.14
36.5 - this one sounded like either police or a taxi service in some Spanish speaking country. The dispatcher would call "carro dos" or "carro cinco" for example, the mobile unit would answer and then the dispatcher would say what was probably an address followed by chatter that I couldn't understand.
I have often thought that a serious radio monitor in the Western Hemisphere should be able to understand Spanish. If the DX keeps being good we may all need to brush up.

Hello to everybody on the mailing list. I am Christian Bryant and I live in Northwest Georgia. I live in Naomi (just east of LaFayette) to be exact. I am a licensed amateur radio operator with a Technician Class, my call sign is KF4ZMB. I enjoy listening to scanners and my shortwave reciever. I have three scanners a BC200XLT, a PRO-50, and a BCT-7. I have one shortwave communications receiver, a DX-394. I have one 2M handheld transceiver, a Yaesu FT-209RH, that I hook up to an outside antenna and a power supply and linear when I'm at home for base use.

I am interested in receiveing marine broadcasts on shortwave, and would like to be able to pick up NAVTEX messages. Can anyone give me any suggestions or tips for these broadcasts? Also has anyone picked up and decoded NAVTEX messages in the Chattanooga Area? And finally does anyone have any information that they could pass to me about Marine broadcasts on VHF on the Tennessee River?

Thanks and 73s,
Christian Bryant

Howdy all...
I haven;t heard anything form this list in several weeks...until a note from newcomer Christian Bryant.

Wonder if my system isn't working properly, or if activity has been slow.

Anyway, I'll try to send out this update.

More talkgroups on the Hamilton County/Chattanooga 800 system. Hamilton County School Maintenance is now on talkgroup 18032.

Red Bank is also moving to system. Their public works department can now be heard on 18832. In the very near future, listen for their police dept to come on line...as soon as sheriff's dept modify's it's consoles for 800 capability. The city ordered file radios last month.

As promised by police chief Jimmi Dotson, the narcotics team is doing more highway drug interdiction. They can be heard on 16656 during day hours. They've been hitting I-24 heavy.

Also, heard airport police on 18192 say "code 11." Come to find out, they went to 18256. So code 11 must mean go to alternate channel.

The White Oak tower was supposed to be under construction by now. But in typical government fashion, it is stalled. Something about "papers needing to be signed." Whatever that means. It's par for the course for government. It will end up to be a year to get that tower going, was past what was scheduled. Meantime, the private sector can get towers up in weeks! Just look at the dozens of PCS 1.9mhz towers that have sprouted up! I would not be at all suprised to hear the White Oak tower not even going up until next year now! Sheriff Cupp was told it would start Sept. 1, and he'd be on line six months later. We'll see!
later...jpl

148. "RailRoad Police"

Yahoo group: chattradio
Date: 1998-10-12 02:23:20 UTC
From: LFDGAJR@xxx.xxx
Topic: 148 Message: 148

Hello All,
Today I was listening to Walker County Sheriff's Priority (151.130 Mhz) and I heard a unit identifing itself as "RailRoad Police" call Walker Central. The officer (RailRoad Police) advised Central that he was in his private vehicle, but a vehicle matching the description of the vehicle they had given out on a Lookout had just passed him at a high rate of speed headed toward 2A on Hwy 193.

Does anyone know who "RailRoad Police" might be (Company, Which RailRoad, Public or Private PD...)? And if so do you know if they use any other frequencies and what they might be?

Thanks for the help,
Christian Bryant

If they're like Tennessee's Commercial Vehicle Enforcement, they operate
on the channels used by the state troopers/highway patrol. But, can't
say for sure...

As a first hand sometimes user of Walker Central
as "Walker Red Cross 1"

There is no telling who that guy was. There is no
real formal process of who the ops will answer, etc.

But the odds are real good that someone at E911 knows
who is his or he has some nerves of steel to try.

The guys and gals there are pretty good at picking
up on a bootlegger, etc. It has been a few years
but E911 have called on the hams in the past
to go RF hunting!

When Chattanooga PD was still on 460 Mhz they has 2 or 3 Unit numbers assigned to RR PD.
They were Southern RR then Northfork-Southern RR PD units out of the DeButts yard.
Have heard them in the past calling for PD or Fire units from sidings in Hixson and Tyner too.
Never heard what is now CSX but they might have had units too.
Have not heard and unsure if any RR PD have radios on 800 trunked system.

Walker County probably has same araingement since both are using VHF radios.

Its also possible that they may pop up on the local Sheriff's freqs
too (Walker, Catoosa, ect.)...I know that GSP converses with the
Sheriff's Dispatchers on S.O. freqs
as needed also.

I don't believe that NS has access to the Chatt Trunk System (haven't
ever heard
them)...although they do still have cell phones to call with.

An interesting side note...There is now at least 1 MARKED Norfolk
Southern
Railroad Police Car around town. It is a white Caprice with grey stripes
and the
U.S. Eagle symbol on the doors, looks sharp.

Lurk Mode Off ...

Greetings all from southwest North Carolina, Eric Rudolph search country and the home of Grove Computers and Radio. I want to take this opportunity to extend an invitation to anyone in the SE US that is thinking about attending the Chattanooga, Tennessee hamfest to consider attending my Saturday afternoon "radio spectrum" forum. It should go down around 1-1:30 pm on Saturday, October 31. I will be speaking about what is out there to hear on HF/VHF/UHF frequencies outside the ham and broadcast bands. If you attended the 97 Birmingham Hamfest, it will sort of go along the lines of the talk I gave there, but more detailed.

The Chattanooga Hamfest is a lot of fun and I hope to meet quite a few of you on Halloween in Chattanooga. Also I would like to especially thank Dewey Bryant <kd4ehc@...> and the entire fest committee for inviting Gayle and I over for the weekend. We are really looking forward to it and it is always a pleasure for us to meet members of our wonderful radio hobby community. If you want more info on the fest, I suggest you drop Dewey some mail at: "Dewey A. Bryant" <kd4ehc@...>. He should be able to point you in the right direction. Until Halloween,

Your correct about city net 2. City net 1 is 16784...primarily used for traffic enforcement, and special events at stadium, auditorium etc. In case you haven't monitored the county-wide disaster channels, they also have some interestign traffic. The city vice squad uses them for surveillance during prositute busts. All radio's in Hamilton County-Chattanooga have them:
DISASTER 1 18704
DISASTER 2 18736
DISASTER 3 18768

Again, vice squad uses them occasionally, and training uses them too sometimes. They are primarily assigned as "mutual aid" channels for all agencies in times of disasters/major events. During Riverbend, police used Disaster 1. During the airshow, Disaster 1 & 2 were used for police-ems. Speaking of the city nets, every city radio should have these two channels.

I heard them ID as "Red Bank Police Dept." today. This was my first thought yesterday as many Dayton Blvd addresses were mentioned, but then I heard them say "Hamilton County Sheriff's Department" and thought that was an ID. They must have just been referring to the Sheriff. I also heard the car to car on 18928 today. Thanks for the fill-in.

171. NASA Frequencies

Yahoo group: chattradio
Date: 1998-10-28 15:59:52 UTC
From: Larry Van Horn
Topic: 171 Message: 171

I have noticed over the last 24 hours a significant increase in the number of calls and email here at B-town for individuals wanting NASA/Shuttle frequencies. We have reposted to our website the article that Bob Grove and I wrote in 1996 for Satellite Times/Monitoring Times on monitoring NASA. It should provide you with everything you need to enjoy the upcoming STS-95 mission. Point your browser to: http://www.grove-ent.com and click on the Monitoring Times home page link. You will find a link to the story there.

Have fun and good hunting,

Larry Van Horn

KN4VY 442.075 repeater out of Dayton, TN was running it one night a few
months ago but I'm unaware of any others that rebroadcast it...

182. List delay

Yahoo group: chattradio
Date: 1998-11-04 21:37:43 UTC
From: Matthew Sadler, KF4LHP
Topic: 182 Message: 182

I may be sending out a test message or two in the next day or two. I checked on OneList's site about the delay in Phil's message, but it may have been his mail server or OneList's servers or someone else in between that caused the delay.

73 and good signals!

BTW - mark your calendars! The Tennessee Tech Amateur Radio Society/Cookeville Repeater Association hamfest (I'm the repeater manager for TTARS) will be April 10, 1999 here in Cookeville at the Hooper Eblen Center on the TTU campus. More information to follow as we start to approach the date. Mostly flea market sellers, so if you've got a few things to sell, check us out! For directions and information, email me.

184. NEW REPEATERS

Yahoo group: chattradio
Date: 1998-11-09 00:28:56 UTC
From: John Pless
Topic: 184 Message: 184

For those who like to keep tabs on Georgia stuff:
Dade County has a new repeater on 156.180mhz. This is for fire/rescue/ems. Apparently Hutcheson Medical Center has also reprogrammed ems radios pagers with this frequency. The repeater input is the frequency Dade used as simplex for so many years, 153.950. So rather than keeping the old freq in your radio, use 156.180MHz.

Also, confirmed couple other repeaters that were somewhat mysterious to me. Both are licensed to the City Of Rossville, and why they exist is beyond me. But they are great for scanner listeners. 453.8625 repeats all traffic on the Georgia Sheriff's Net 154.935. This way, you can monitor just about all traffic in North Georgia. Also, 460.625 is another good one to monitor. This repeats all fire mutual aid traffic on 154.280. Even though 154.280 is designated as mutual aid, Bradley County EMS still uses this as a dispatch channel! (wonder if FCC made exception?) On 460.625, you will also hear the mobiles repeated from 155.325, Memorial EMS/Chattanooga Ambulance Service (the Nuns own both) The base for Memorial EMS is repeated on 465.625.

PS before I sent this, I saw the FCC file on Dade County. Apparently the new fire/ems is actually on 156.1875, call letters WYC618 and WPCD 506.(but 156.180 is strong and clear) ** I also found a new listing for Walker County, 160.170Mhz...but don't know what this is used for. Don't know if it's another hidden sheriff's dept channnel...like 156.105 is what deputies call "16" for car to car, sometimes encrypted. It must be under a hidden license or name, cause Walker is not listed.
Later...jpl

I'll try this new frequency since I live in Walker County. Walker County also
uses 154.950 as a sort of car to car channel.

Hello,

My name is Greg Ramsey and I just joined the list. I recently purchased a Uniden bc895xlt which I just set up for mobile use today. I normally monitor from north Georgia but I frequently travel to Tennessee and take my scanner with me. I was wondering what frequencies to monitor when traveling around chattanooga to avoid speed traps.

Thanks,
Greg Ramsey

Greg:-
Welcome to the list! Although I live near Knoxville and cannot claim the expertise in the area systems like M. Sadler and hsi fellows, I can help you with your question
(partially) about "speed traps."
The THP district office in Tiftonia dispatches for the counties of McMinn, Bradley,
Meigs, Hamilton, Marion, Franklin, and a few others. The dispatch freqs are 42.26
mobile and 42.42 base. This is two-freq simplex and you must monitor both sides.
Close range car-to-car comms are on Ch 4 (42.36) which is single freq simplex. Most traffic enforcement, if working in teams close together, use this. Try these and
see if they don't give you a lot of activity.
I can't help you much with Hamilton County and Chattanooga, as they are switching from UHF conv to 800 trunking and I have no equip to monitor them.
Try the THP high band channels as well at 159.090, 158.730, 155.430, and 154.755.
Hope this helps!
Thad Osborne

Also check Matthew's web site at http://www.qsl.net/kf4lhp. He has a
list of the frequencies and talk groups. To follow the talk groups you
will need to program the frequencies into your 895 and be sure you set
it up as a type II system (this is the default). Most often I have
heard "speed reduction" on channel 7 which is talk group 16784.

Welcome Greg to the site!

Chattanooga police usually operates it's traffic enforcement on "City Net 1" which is talk group ID 16784.
Sometimes, highway surveillance is on 16656. That's the narcotics talk group. Both narcotics and traffic have been teaming up on highway interdictions.

Both dispatch channels also offer information on where officers "404" a driver. ADAM 16432 covers all north of river, and downtown/alton park/tiftonia sectors. BAKER dispatch is on 16464. They handle all highland park, east chattanooga, brainerd and east brainerd. Right now city is hiring more dipatchers (14 total) and has purchased two new dispatch consoles. The idea is to have a third dispatch channnel, now called CHARLIE channel which is 16816.

The Tennessee Highway Patrol uses 42.42 base/42.26 mobiles. Car to car is on 42.42, they also use 42.360. The thing about THP...they don't seem to be ou there anywhere as much as the Georgia State Patrol. If you see a Tennessee trooper in Hamilton County, that is a rare thing indeed! Usually, they're enroute somewhere else, or assisting traffic with locals on interstate accidents. Highway traffic through downtown Chattanooga zooms by at speeds of 70 to 80mph...including trucks...THP does nothing!

I have some questions for any of the members on this list. I just bought a 2 meter hand held radio. Where do I get info to study for my license? Where do I take exam? Is there a local radio club? And can someone provide a list of SE Tennessee/Northern GA 2 meter repeaters, along with input freqs, ctcss, and auto patch info??? Thanks in advance! JPL

195. 2 meter freq. list

Yahoo group: chattradio

From: Chris Palmgren
Topic: 195 Message: 195

John,

I have compiled a rather comprehensive list of regional amateur radio repeaters that I can hit from my house. The list is found at http://www.qsl.net/wd4oar/repeaters.htm and you can print this for your own use. I'd be happy to show you how to use the 2 meter HT sometime this week if you take it to work. I've got one of those particular rigs myself and it was my very first ham rig.

As for local amateur radio clubs, I'd recommend taking your test at the Chattanooga Amateur Radio Club which meets on the first Friday of every month. The Chattanooga Club is a member of the ARRL VE (Volunteer Examiner) team and has a better reputation than some other local VE teams. You can visit their webpage at http://www.qsl.net/w4am for more information. Gordon West, WB6NOA, publishes a book about obtaining your no-code tech license. The book can be found at any local Radio Shack store. Many amateurs nowadays come into the hobby with these privileges. Please let me know if I can be of any more assistance. I'm president of the Ocoee Amateur Radio Society (http://www.qsl.net/wd4oar) and would love to have you attend one of our meetings in Cleveland.

Thanks!

Chris, W4ORS
OARS President

I have a list of 2 meter repeaters on my web page at
http://members.aol.com/LFDGAJR/index.html
The site is new and doesn't have a lot yet but it does have 2 meter repeaters
in the area.

Does anyone in Chattanooga who is familiar with the City of
Chattanooga Trunked Radio System know what the talkgroups 17552, 17872
and 18832 belong to? If so please respond to David at
ds1968@... directly and to the mailing list also.
I believe that 18832 belongs to Public Works/Sanitation but I'm not
sure. If anyone wants the semi-complete list of talkgroups for City of
Chattanooga T.R.S. please email me and I'll send a document to you.
Also does anyone know who owns/operates the Type I T.R.S. that operates
on 861-865.1125 and 861-865.3625 Mhz? Thank you for your time!

Talkgroup 17552 was used by emergency services for the air show 98. Not sure if it's a permanent talkgroup, or temporary for the event.

17872 is the second talkgroup for the radio shop. (17840 is radio shop 1) I think I did hear someone mention it was used for Motorola engineers. (???)

18832 is the talkgroup for Red Bank Public Works.
I'd love to see any new info... by the way, the chief of hamilton county ems said the radio shops have already designated talkgroup numbers for ems, hospitasl, medcom, etc...but would not give them out...anybody have any new info on the system??? Last I heard work was supposed to begin on the two towers-sites in county on White Oak and Flat Top Mountians.

202. TRENCH RESCUE

Yahoo group: chattradio
Date: 1998-12-15 23:46:52 UTC
From: John Pless
Topic: 202 Message: 202

By now most everybody has heard about the 16 hour trench rescue on Highway 58.
Just FYI. A lot of two way chatter was on fire mutual aid 154.280. But
traffic on that freq is repeated on 460.625mhz. It's a station licensed to
Rossville GA. The repeater allowed great coverage of on scene units,
LifForce, LZ command etc.
So 460.625 is a great one to plug in the scanner!
Now, I wonder if there will be a talkgroup on the Hamilton County 800mhz
systemn that will repeat or simulcast vhf mutual aid like 154.280??? It's
done in other places and works well, allows vhf guys to talk with 800 guys.

Topic: 203 Message: 203

Season's Greetings to all... I'm in town now, so here's some frequencies
you can monitor to keep up with the winter weather situation:

*** MEDIA ***
FREQUENCY PL USER
450.0875 156.7 WTVC-TV - Two Way F3 (Bean Mtn repeater), F4 (simplex)
450.1875 173.8 WRCB-TV - Two Way F1 (Walden repeater)
450.250 WTVC-TV - Wireless IFB
450.2875 146.2 WDEF-TV - Two Way (Signal Mtn repeater)
450.3125 107.2 Radio Chattanooga (WGOW, WSKZ, WOGT)
450.4125 173.8 WRCB-TV - Two Way F2 (simplex)
450.4875 156.7 WTVC-TV - Two Way F1 (Lookout Mtn repeater), F2
(simplex)
450.5875 Metro Skywatch

*** PUBLIC WORKS ***
FREQUENCY PL USER
39.820 East Ridge Public Works
46.520 Signal Mountain Public Works
46.560 Walker County Public Works
155.040 141.3 Rossville Public Works (shared with Fire, Police)
156.180 ? Tennessee Department of Transportation (simplex,
Chattanooga area)
159.105 156.7 Hamilton County Public Works
159.180 136.5 Tennessee Department of Transportation (linked
repeaters, Region II)
453.175 127.3 Collegedale Public Works
453.350 123.0 Fort Oglethorpe Public Works
453.650 136.5 Chattanooga Public Works
453.750 206.5 Soddy Daisy Public Works
453.825 136.5 Chattanooga Public Works - Citywide Services
453.900 136.5 Chattanooga Public Works
18832 on City TRS Red Bank Public Works

*** UTILITIES ***
FREQUENCY PL USER
35.160 Century Telephone of Ooltewah-Collegedale
35.160 Chickamauga Telephone Corporation
48.180 North Georgia Electric Membership
48.480 North Georgia Electric Membership
451.050 162.2 Electric Power Board - Main
451.075 131.8 Volunteer Electric Coop
451.200 67.0 Chattanooga Gas Company
451.225 162.2 Electric Power Board - F2
451.350 114.8 Ringgold Telephone Corporation
451.375 162.2 Electric Power Board - Underground

451.475 114.8 Volunteer Electric Coop
451.625 67.0 Chattanooga Gas Company
451.675 162.2 Electric Power Board - F4 Meters
452.150 162.2 Electric Power Board - Line Department
452.450 162.2 Electric Power Board
461.300 D243 Comcast Cable TV
461.475 D243 Comcast Cable TV

Additions or corrections, drop me a line! As far as utilities, this list isn't complete, I've omitted most of the underground utilities since they aren't usually affected by the winter weather.

205. Power fails... stations go dark

Yahoo group: chattradio
Date: 1998-12-24 05:52:20 UTC
From: Matthew Sadler, KF4LHP
Topic: 205 Message: 205

As the ice builds up on power lins and tree limbs, sections of the city are experiencing power failures. So far, a number of stations on Lookout Mountain are out, but the 146.610 W4AM repeater and all of the city of Chattanooga's repeaters are still on the air. 99.3 FM, Kicks FM, is off the air, as is 98.1 WXKT (ex-WZST, soon to be something else).

A few tips:
- Collegedale 147.000 repeater has battery backup (and is on it at current). You can tell by a faint beep that sounds periodically when the repeater is on the air. It is only polite operating practice to keep QSO's on a repeater on battery backup as short as possible, and move to simplex or another repeater that is on regular power if possible.

- Find your flashlights NOW, charge your batteries NOW - but you should have already done this... you may also want an extra antenna or two handy, with coax and necessary adapters so if your main antennas are damaged by the ice you can get back on the air promptly.

- I think I forgot to include these frequencies in the list I sent out earlier today, so here it is now: 451.025, 451.1, 451.25 - all are Cleveland Utilities.

- Two other traffic reporters repeaters: 464.025 MHz PL 88.5 and 464.725 MHz PL 82.5, these are used by the Chattanooga Air Traffic Network.

Be safe, have a happy holiday season, and post your radio experiences here!

My experience has been that it works pretty poorly in Fort Oglethorpe,
but down south of the battlefield it worked pretty good on my
TrunkTracker with the attached antenna! The White Oak site may make some
difference, don't know.

Yeah, I'm wondering who all will move - if rescue and the VFDs will move
or stay on VHF.

210. Re: Winter weather makes for fine listening!

Yahoo group: chattradio
Date: 1998-12-27 17:39:51 UTC
From: John Pless
Topic: 203 Message: 210

I was just down in Chickamauga covering a trailer fire. The Trunktracker picked up Chatt/s 800 system very well, with just the stock rubber duckie inside the car. There were some scratchy places...but by and large 800 does very well there. In fact, 800 works great down in Ringgold, sometimes hear officers there picking up someone at jail.
The 800 also works well into Bradley county. EMS chief told me he can get out from downtown Cleveland on his portable. Whenever the county towers go up, it can only get better.
Still not sure on EPB...again, there was talk of them going to it, since EPB is a city owned operation. From a practical point... all city services could work on just four sites...as opposed to maintaining multiple uhf-vhf systems as they do now.

At some point more public works should be going the same way. I wonder if THP will ever want a talkgroup on system. Once its' all complete, system will cover well into Georgia, over into Polk County, and up into Meigs/Rhea Counties. Pretty much all THP's Chattanooga district this side of Monteagle.

As to Ham training, I got the Rat Shack book...if I have time to study enough, I'd like to take test at next January 8th meeting. How long does it take o get call letters and license after passing test?

Later...jpl

From: TGO1@xxx.xxx
Topic: 203 Message: 211

John, typically THP equips assigned vehicles with THP low band, THP high band, and a county radio based on the portion of the district that trooper normally works.
"Pool" cars have the state radios only. Here in Knox County, which has been 800
for several years now, Knox County troopers have 800 radios normally on KCSD talkgroup; however, since the system allows "dynamic regrouping," they can be enabled for any talkgroup, such as Knoxville police and fire. City of Oak Ridge
is also 800 now and THP was called there earlier in year when a melee broke out
in Gamble Valley. What may happen is that troopers working Hamilton Co. will get
county radios for that system. The UHF mutual aid system is still maintained up
here and is accessible to capable units for interagency use.
Just a guess as to how the interop situation may play out in your area.....
Thad Osborne
Knoxville

Right. The biggest hole I noted was on the east side of Mission Ridge
down in Fort Oglethorpe, but on south into the battlefield it picks up a
lot better.

> Still not sure on EPB...again, there was talk of them going to it, since
> EPB is a city owned operation. From a practical point... all city services
> could work on just four sites...as opposed to maintaining multiple uhf-vhf

I doubt this one. Public works is staying on UHF for a while longer, and
I don't see any reason why EPB would switch over. Also, all of their
licenses are issued to them, not to the city radio shop. So, for all
practical purposes, I think the trunked system is going to be more of a
public safety system than a government all-agency system. Some cities
and municipalities in Texas maintain two trunked systems, one for public
safety and one for city services.

> At some point more public works should be going the same way. I wonder if

I doubt it. THP's post has capability to get on the old CPD channel 4,
460.400 MHz. They've never had radios on Chattanooga or Hamilton
County's systems, since they don't patrol down in the Chattanooga area
much.

> As to Ham training, I got the Rat Shack book...if I have time to study

Maybe a week? Not too long. Once your callsign is issued, you can go on
the air, even if you don't have your paper license yet.

Oops. What I've heard is up near where I-75 crosses over towards
Cleveland, where the forestry tower and several others are already
located.

yep... it's in the area where there is already a cluster of antennas, towers just south of mahan gap road. if you go up ooltewah ringgold road, north of i-75, and go towards mahan gap, look to your left. there are two cell towers, couple tall towers with guy wires, and a fire tower. the fire tower is coming down. the top will be used as an observation deck fr clevelands' landfill. there is a brand new tower being built by signal one communications, that will be about 250 feet tall. it's right next to the spot where the fire tower is. the lands already been bulldozed, etc.i'm not sure if that one will have hamilton county's 800 system on it. it will have various pcs services pagers etc. you can drive up there and peek around. quite a view. if you want directions on getting up there i'll send them. the white oak site was supposed to have started back in september, but is of course behind schedule. sheriff cupp was told he'd be on line by march. i seriously doubt that. the fourth tower will go on flat top mountian, somewhere in the vicinity of where the new highway 111 is on top. it's the dead end of what was jones gap road. the overlook there is great!!! you can see watts bar, bean mnt, lookout...incredible visibility. that tower will pretty much give coverage all the way up towards watts bar.
I'll check around and see if i can't get a better timetable for these projects. the county has already floated bonds for equipment, but for some reason it keeps getting stalled. hmmm!
later jpl

218. Chattanooga PD Unit IDs

Yahoo group: chattradio
Date: 1998-12-29 05:51:25 UTC
From: LFDGAJR@xxx.xxx
Topic: 218 Message: 218

I used to listen to Chattanooga PD when they where on the 460-Mhz band. When they switched to the Trunked system I stopped monitoring them because I didn't have a Trunktracker and to me it was too much trouble to lock and unlock the data channels everyday and to try to follow the communications on a conventional scanner. Well this Christmas I got some money as a gift and with that money I plan to buy a BC895XLT Trunktracker. I am looking forward to monitoring Chattanooga PD again (Like tonight when me and my friends where chased for no reason by a teenager down Gunbarrel Road it would have been nice if we had had a BC235xlt so we could have known when the PD would get be getting there).

I have two questions.

1) Does anyone know how the Unit IDs are set up for Chattanooga PD and FD? (Ex. 200 - Traffic, etc.) Also how do the EMS and EMA Supervisors ID?

2) Has anyone used a BC895XLT? I hear it is a good scanner for trunking and conventional scanning aswell can anyone back this up?

Thanks,
Christian KF4ZMB

219. [FedCom] Music City scanning update

Yahoo group: chattradio

From: "John R. Robinson" <jrrobinson@...>
Subject: [FedCom] Music City scanning update

Our Sunday newspaper has confirmed a recent article that Nasville, TN is going
Motorola
digital for all
police, ambulance, and fire transmissions in 1999. Remaining metro radio
transmissions
are to be 800 Mhz
trunked.

I have begun monitoring the action freq.'s in earnest while I can enjoy the
privilege.
Amazing how I have
taken this for granted.

Here's hoping the electronic industry will meet the digital challenge so we can
continue
to listen to these
action freq.'s.

Anyone know of any digital developments coming our way?

I thought Nashville was going ASTRO. I also would like to know when they will
come out with digital compatible TTs and if there would be a way to upgrade present
TTs or if the new TTs would be analog and digital compatible on 400, 800 and 900
Mhz on all available trunked systems(not just Motorola), along with putting in
military aircraft band and CB band, all in a portable TT. Now that would be a
great monitoring TT! Hmm!

I have had very good luck with the bc895xlt. i haven't missed a
conversation yet due to changing frequncies.

224. Re: [FedCom] Music City scanning update

Yahoo group: chattradio
Date: 1998-12-29 16:12:27 UTC
From: John Pless
Topic: 219 Message: 224

No digital trunktrackers...yet. Uniden is about to unveil the next generation of trunktrackers. They will come with 232 ports to hook up to computers. They will be able to directly hook up to UNIDEN, and users can download trunked system info/channels directly. Several new models are due. The first one will be a handheld called the BC 245xlt. According to preliminary reports, it will feature 300 channels. But it will be able to track GE/Ericson trunked systems as well as motorola systems. There is only one GE/EDACS system in our area right now. It will also be able to: track two motorola systems at same time, or monitor one motorola and one GE system at one time, or monitor a motorola system AND conventional repeaters at once. Or two GE systems, etc. It's also supposed to be able to follow 400mhz, 800mhz and 900mhz trunking systems. It's going to be shown at a consumer electronics show in Las Vegas in a couple weeks. Look for delivery sometime in spring. Maybe one day, with so many places going digital (like nashville) we'll see a digital unit.

As to unit numering for Chattanooga police:

ALPHA patrol team North Of River.
CHARLIE patrol team Downtown, south end, St Elmo, Lookout Valley.
ECHO patrol team East Chattanooga, High 58 area.
FOX patrol team Higland Park, Rossville Boulevard.
GEORGE patrol team everything east of Missionary Ridge
*** THE DEPARTMENT HAS JUST REDRAWN BEAT DISTRICTS. THEY HAV'NT RELEASED IT JUST YET. IT COULD CHANGE THE ABOVE. THERE WILL BE A THIRD DISPATCH CHANNEL, "CHARLIE CHANNNEL" THAT WILL GO ON LINE IN SPRING. WATCH FOR THAT."
200 units are traffic/dui
500 units are property crimes detectives.
(narcotics units are 530-570)
600 units are bombs squad, some narcotics.
700 units are major crimes(rape/homicide/doemstic violence)
800 units are Identification
900 units are mounted patrol, bike patrol, and park police that are at Aquarium/Walnut Street Bridge/River park district.
Unit 714 is PIO Ed Buice
Unit 715 is PIOn Lt. Doug Grey
Unit 716 is PIO Sgt. Bergenback

I'll try to get a better list.

Another quick note on EMS/EMA id's
Unit 101 is Emergency Service Director Don Allen
Unit 102 was chief Joel Vincent, now retired. He was chief over disaster preparedness.
Unit 103 is EMS Cheif Wilkerson
Unit 104 is HAZMAT/Fire Cheif Reavley
Unit 105 is Bill Tittle, PIO and new chief replacing Joel Vincent's duties.

400 series units are supervisors. Some are supervisiors for a certain sector, others supervise one of three shitfs.

PIO-Public Information Officer (?)

My notes show the following:
17904 Building Inspectors
16850 I find it active, but have no info
17552 Special Events
17136 I didn't realize Signal Mountain was off of this one

Does anyone know about 16400? My notes show that it is non-existent, yet I
find it active.

231. Chattanooga Priority Codes

Yahoo group: chattradio

From: Randy
Topic: 231 Message: 231

Does anyone have a list of the priority codes used by Chattanooga PD?

I've heard codes ranging from 3 to 8, generally 3, 4 and 7. It seems that only certain dispatchers and/or certain calls receive priority levels.

Howdy all!
A new talkgroup on Chattanooga 800 is 18992. Apparently MEDCOM is making good on it's move to 800. this TG apparently relays all traffic on hospital freq 155.340.
I wonder if each hospital will eventually have it's own TG as EMS continues going 800????
PIO stands for Public Information Officer. It's the person who hanldes all media inquiries, and releases inforamtion about incidents/cases.
Talk group 16850 actually doesn't exist. All real talk groups are divisible by the number 16. Sometimes a trunktracker will pick up a weak signal, and give off "spurious" numbers. 17904 is city building inspectors. 17552 was used by emergency services during AirShow 98. Not sure if that was dedicated for the Air Shows, or is a future EMA TG.
Signal Mnt does indeed still use the 800 trunking system. Their primary channel is a conventional repeater on 854.9875. TG 17136 is their car to car channel. PD also has 16528 for use as mutual aid. They also have all three disaster TGs...which they used during the search for a lost hiker a couple months ago. They still use 17136 regularly for Chit Chat, and during speed redcution ops. It was active during recent ice storm. PD there also occasionaly uses fire channel TG 18672 as well.
Later...JPL

Topic: 218 Message: 233

18992 must only be used during daytime, I never hear it at night. John-do you have more info on it? Heard Red Bank PD talk to Chatt PD on 16528 last night. PD rates all calls dispatched on priority. "One" would be a major crime in progress. Others are sort-of self-explanatory. A wreck with injuries would have a higher priority over a wreck with no injuries. Property damage would be Priority 7. A 446 (burglar alarm) would be a Priority 3. Does that help Randy? If someone does have a compiled list of calls and their priorities- please send it to me (ds1968@...)or post it on the list. I don't know if my attached file from my last posting made it to the list or not. Could someone be kind and e-mail me on that issue.
And last- does anyone have any complete up-to-date info on conventional local civil defense/FEMA/local EMA etc... from all surrounding counties including Hamilton? All I have programmed in scanner is from '95 Rat Shack books. I don't know if they are still correct/current as listed. I hate to have to search for correct ones while IN a major emergency. Better to be prepared ahead of time!
David

236. Gold Cross EMS

Yahoo group: chattradio
Date: 1999-01-04 02:24:57 UTC
From: LFDGAJR@aol.com
Topic: 236 Message: 236

I spoke with a paramedic that worked for Gold Cross EMS that does (or atleast did) provide EMS coverage in the Catoosa County Georgia/ Fort Ogelthorpe Georgia area. I know they were dispatched in Catoosa by Catoosa 911 on 155.265 Mhz, but this paramedic also had what she called a "Company Radio" on which she said she would let the Gold Cross office know of calls or by which they could contact her (matter of fact she kept one with her on or off duty). She let me see the radio and I noticed that it was a Motorola and it appeared to be 800 Mhz. When I mentioned the word trunked to her she said her supervisor had told them the radio system was trunked, but she didn't understand what he meant. I explained it to her, but she was unable to give me any frequency or system information.

Does anyone know what system (frequencies as well) Gold Cross EMS uses also do you have any fleet information and Talkgroup IDs?

Thanks in advance,
Christian

237. A few things...

Yahoo group: chattradio
Date: 1999-01-04 05:56:44 UTC
From: Matthew Sadler, KF4LHP
Topic: 237 Message: 237

First - I don't know which trunked system Gold Cross is on, but if you have two radios, keep one on Catoosa EMS, and have all of the different commercial trunked systems programmed in your trunktracker. When they get toned out on a call, listen on one system with all of the talkgroups that you know aren't theirs locked out. If you don't hear anything, then you can pretty much mark off that trunked system, and start the process on the next trunking system. There are only 3 or 4 Motorola trunked systems in the area.

Second - my time here is limited... I'm going back up to Cookeville Tuesday to go back to class, so I thought I'd talk about my projects that I've been working on to keep me busy during the break. Some of you will no doubt think that these projects are pointless, and they really are, but they are things that I've been interested in for a while and they gave me something to do and occupied my time. So, here's the two things I've been working on. One of them, the major one, is more or less learning as much as possible about the old phone company microwave systems in the area. This has led me to do a lot of research into old FCC records (thanks to the person who gave me the old PerCon 1994 CD, you know who you are) and spend a lot of time on the 'net, and I've found some interesting sites. I have a few pics, will soon have a lot more, and have found a lot of information about where these sites relayed calls to and from, as well as who owned them and their current status. You can find all of this at my page on these systems, which is still very much under construction (lots of pics will be added this coming weekend) at http://www.qsl.net/kf4lhp/telco/ .

The other thing, that I haven't done much with for a few reasons, is researching NAVAIDs, better known as "aids to aeronautical aviation." I'm in debt to AirNav for having all kinds of up-to-date FAA records on these beacons, some of which operate at 75 MHz, others below the AM broadcast band between 200 and 400 kHz, and others which operate between 108 and 118 MHz. I don't have any pics but I've made a few maps up using the U.S. Census Bureau's TIGER mapping service (another lifesaver) and will have them posted sometime soon. I'll email the list when they're available.

If you have ANY information on any of the things that I've been discussing above, please email it to me direct or through the list, either one. Information on a lot of this stuff is hard to come by, or is found in bits and pieces and has to be pieced together. URLs for the sites mentioned are below.

Have a safe & happy 1999!

238. A few more things!

Yahoo group: chattradio
Date: 1999-01-04 22:40:56 UTC
From: Matthew Sadler, KF4LHP
Topic: 238 Message: 238

I've learned a few things lately that I thought I'd pass along before I head north to Cookeville...

1. East Ridge Fire is considering purchasing a repeater to improve HT coverage. My source didn't know where it would be located but said that he was fairly certain that they would have it sometime this year. And, in a related note, AMR has purchased several pagers on East Ridge Fire's channel so they are toned out at the same time as the fire department to improve response times.

2. LifeForce has purchased several 800 MHz radios for installation in LifeForce 1 (hangared here in Chattanooga) and LifeForce 2 (hangared in Sparta, TN at the Upper Cumberland Regional Airport). Remember that Chattanooga Medcomm is migrating to 800 MHz trunking.

3. With all of the telephone companies abandoning microwave systems in favor of fiber optics, one telco has instead installed a new microwave system! Tellico Telephone Company in Monroe County has installed a microwave system linking them to Knoxville. Their website says that they installed the system to offer a redundant path to Knoxville in case of a fiber break.

4. In case any of you hams out there weren't aware of it, the Ocoee Amateur Radio Society has their repeater back on the air from White Oak Mountain, just west of Cleveland, TN. The repeater, a GE Mastr II, operates on 442.925 (+ offset) with a PL of 107.2 Hz required for access. This is an open repeater and all hams are invited to use it - the machine has great coverage of both Cleveland and Chattanooga.

From: Matthew Sadler, KF4LHP
Topic: 239 Message: 239

OK, I'm back... East Ridge has an application in with the FCC for a
repeater. The output would be on their existing frequency of 154.310
with an input on 150.775 MHz.

So... keep an ear on it. It'll be nice when they have a repeater.

That's interesting about East Ridge. I remember not too long ago checking out the fcc on line search engine and finding a new freq licensed to East Ridge Fire. It was somewhere in the 150-151mhz range.
The note below about LifeForce sheds some light. The new talkgroup 18992 (Chattanooga-Hamilton County System) was repeating 155.340 hospital traffic during days. It gets quiet at night though. Now during day, there are units like "MD-4" calling "MEDCOM" on this talkgroup. The 155.340 traffic has ceased. It's definatly not patched, sounds like they've installed a base and talk with portables. Anybody have any ideas? I wonder if LifeForce will move operations to 800 before ground ems units do??? LifeForce Dispatch and MEDCOM are the same thing/people.
By the way. When you check out the fcc license for the chattanoog 800 system, it shows a third site licensed at Erlanger's 3rd Street address. It cranks out the same power as other sites, licensed for 1177 mobiles. I wonder if they will merge the current Erlanger five channel system with the Chattanooga system???

Later...JPL

241. Hutcheson EMS Question

Yahoo group: chattradio
Date: 1999-01-04 23:44:37 UTC
From: LFDGAJR@xxx.xxx
Topic: 241 Message: 241

I noticed that in several places 155.400 Mhz is listed as a Hutcheson EMS channel locacted in Lookout Mtn. I have never heard anything on this channel. A few years ago I kept the channel in my normal scan pattern and never copied anything. Has anyone heard anything from this and if so what? I was wondering if there would be any reason to reinclude it in my scanner.

Thanks in advance,
Christian KF4ZMB

Topic: 238 Message: 243

Unless things have changed since Sunday night I still hear 155.340 traffic at night. I have heard ambulances clear with MEDCOM on 460.625 and 155.205 first before they go to hospital on 155.340. I hear no ambulance dispatches on 18640 at night but starting at morning shift they dispatch downtown units on 18640. Does anyone know when Hamilton Cty Volunteer FDs would go to 800 if at all? Also Dade Cty FDs changed frequencies: was 153.950 now 156.180 and Walker Cty station #19 which serves Covenant College and surrounding area up to City of Lookout Mtn. Ga. city limits is now with Dade Cty as part of WestBrow station; and Dade Cty Sheriff now has 2 repeaters on 155.190. It's setup the same as Walker Cty FD/EMS dual repeaters on 154.175. PL tones are different from "north" to "south" repeaters. Thought I share this new info with ya'll.

I never heard anything on this freq.. I thought it was ambulance to hospital freq. for Hutcheson Medical Clinic or in-house comms for the clinic. I also would like to know if it is still used. What frequency IS used for ambulance to hospital with Hutcheson? I never heard them use 155.340 when enroute to Hutcheson Clinic when I worked on Lookout Mtn..

Traffic on 155.340 will continue, as it will on 155.205. Evenutally,
Hamilton County EMS will move over to 800 for hospital traffic. But
outlying counties and Georgia areas will continue VHF.
Dispatches on 18640 are simulcast from 155.94 whenever the dispatchers
remember to activate it. The consoles are computer driven. The dispatcher
presses a button to transmit, when they simulcast of change freqs, they use
a mouse to click on a talkgroup displayed on a screen. Similar to how you
click on an icon when working on your computer. Once the dispatcher send
out a call, they deactivate the 800mhz for routine traffic on 155.940 only.
Like Medcom, eventually all traffic will be on 800.

Some additional information.....

DeWayne Wilson, owner of Angel EMS just recently changed the name from Gold Cross to Angel. Whether this was precipitated by some sort of break-up with Gold Cross I don't know.

Hutcheson was in the EMS business long before the purchase of the Wilson's EMS service. Hutcheson covered all of Walker and Dade Counties and varying portions of Catoosa County. The purchase of Wilson EMS was based on business reasons but I don't believe it was their "kick start" into EMS as you have characterized it, Alan. Hutcheson had already been in the business for a long time with extensive coverage and possession of numerous licenses for coverage.

Alan,

I didn't mean to appear to disagree to any great degree or in any serious manner . . . .

As to call volume - of course there would be an increase in call volume. A business would hardly be deemed prudent if such a purchase of a competitor did not increase volume or revenues. In that limited sense, then, I could concede in a limited basis that the purchase consituted a "jump start".

I voiced disagreement with the characterization since it generally signifies that a business is not doing well or is failing and "jump starts" their success by some action. The merger of Daimler-Chrysler, for instance, could hardly be characterized as "jump-starting" either entity but they certainly merged for good business reasons. Sometimes a business takes an action merely because it makes good business sense in the broad scheme of things -- such, I believe, was the purchase of Wilson EMS by HMC.

250. TERRORISM - and HOLY TERROR

Yahoo group: chattradio
Date: 1999-01-05 18:49:01 UTC
From: Dewey A. Bryant
Topic: 250 Message: 250

>>>

Ominous Patterns in USA
The targets and tactics of "holy terror" operations that have occurred or been attempted during the past decade lead to the possibility of far more destructive acts. Ominous examples already abound:
+ Poisoning of water supplies of major urban centers--not only American white supremacists, but terrorists in India are alleged to have made such plans.
+ Dispersal of toxic chemicals through internal building ventilation systems--attempted by white supremacist "skin heads" in Arizona.
+ Indiscriminate, wanton attacks on busy urban centers--accounting for 1,400 injuries and deaths in Bombay last winter, alleged to be the work of Muslim terrorists.
+ Attacks on power grids to disrupt electrical service to large population areas--conducted by a Black Muslim sect in Colorado.
+ Poisoning of food--undertaken in Oregon by followers of the Baghwan Rajneesh to influence a local election.

This resulted in COMBATING TERRORISM:PRESIDENTIAL DECISION DIRECTIVE 62 (May 1998) http://www.usia.gov/topical/global/terror/pdd62.htm
Which indicates where the US government is going and gives insight into events.

A successful terrorist attack on US soil may employ anti tank missiles. Please examine http://www.state.nv.us/nucwaste/trans/risk13.htm for pictures of various weapons and a technical assessment of the consequences of such an attack on a USA nuclear waste shipment. These weapons also could be used to knock an airliner out of the sky while on approach or departure. If someone has more knowledge of the capabilities of these weapons please speak up.
Weapons like these have been used in successful armored car holdups. They are available in the USA to those who want to get a hold of them.

Hate Groups, Terrorists, & Radicals -(part of an awesome site for police officers) This page has two sections, the first links web sites of the watch dog
organizations that monitor hate groups and such, and the second is links to the actual web sites of the hate groups themselves.

255. Friday evening federal activity

Yahoo group: chattradio
Date: 1999-01-11 00:43:58 UTC
From: Jim Knight
Topic: 255 Message: 255

Sorry to be so slow posting this, but some of you might want to add these frequencies to your scanners if you don't have them now, or if you do, let me know what you know about them.
Friday evening between 4:00 and 5:00 PM I heard several key-ups but no conversation on 168.85 MHz with 167.9 PL tone. Possible FBI?
Also on 169.55 with 173.8 PL tone I heard agents who had rounded up some illegal Mexicans checking them out by name and DOB. Don't know if this was in the Dalton GA area or not; the only other conversation was tag checks on North Carolina plates, so maybe not.

NexTel hasn't gone online yet. Southern Company's system is almost
identical to what the NexTel system will be like when it's on the air -
they both use Motorola's iDEN system that integrates mobile phone (NOT
cellular), alphanumeric paging, and digital two-way voice into a single
unit... so, you can't monitor it with a TrunkTracker.

262. East Ridge PD

Yahoo group: chattradio
Date: 1999-01-20 22:52:47 UTC
From: John Pless
Topic: 262 Message: 262

It's official. East Ridge is going to the Chatt/HamCo 800 system. City Council passed expediture of $105,000 to buy portable radios and a base station. City Officials will meet with Motorola folks tomorrow, Thursday January 21. They'll discuss city needs, equipment etc. I'm told that once purchase orders go in, should take couple weeks. So sometime in February look for some new talk groups ids.
The city was considering keeping it's old outdated UHF equipment, and buying equipment to patch in to the 800mhz system. It would have cost about 90K...it was a stupid idea since they can get full upgrade for a little more. Now, they will abandon their lease on the site which is home to current UHF system. HAMS....this might mean East Ridge may want to sell it's UHF equipment, which I'm told can be modified for 440Mhz use.
The city has also determined it WILL NOT move dispatch operations to the 911 Center on Amnicola Highway. They will instead upgrade CAD systems at it's own HQ. By the way, city residents/businesses pay about $140,000 a year for their "911 Fee" on phone bills. Since right now residents get NOTHING in return for the money they pay on phone bills, it is hoped the 911 Board may one day help East Ridge upgrade it's center with the money it's own residents generate.
One more 800Mhz note. A while back, talkgroup 18992 was active with testing. It was a patch for Hospital Freq 155.340. This talkgroup and others will be for Chattanooga Medcom. I'm told it will really become active in February. An Erlanger ER physician will carry an 800 radio. EMS units wanting to speak directly with physician, NOT nurse or er tech, can use this system. EMS units can operate direct on the 800 system. For units without 800, they can request MEDCOM to patch them onto this. I'm told the city 800mhz gets much better signal into the ER than the hospitals own five chanel system (????)
February should be a good month for keeping tabs on 800 stuff. And sometime, the White Oak and Flat Top Mnt towers should be going up as well...maybe we;ll hear more Motorola guys on tg 17872...if not, radio shop 17840 may get more active.
Later...JPL kg4bod

MEDCOM is a state licensed entity of what is technicaly known as
Chattanooga-Hamilton County Hospital Authority. Technicaly, it's a Hmailton
County thing.

The incline is actually on the 800mhz system.,They operate simplex on
857.9625.

By the way, thanks fot the new talkgroup info!...jpl kg4bod

Hmmm. lets see. If East Ridge programs their radios like Red Bank... 19056 would be their channnel 2 car to car. 19024 would be main channel. The channel below that is 18992, which is MEDCOM. The spacing between each talkgroup is "32". Whats' interesting, is to make your own chart. Start listing all talkgroups from 16400 on up, going in 32 increments. You'll get 16432, 16464...etc. Just take a legal pad, divide into a couple columns... you'll get a great idea on how different users are "clumped" together. Getting back to East Ridge...19056 might be main, and their talkgroups go up from there. The way things look, Hamilton County Sheriff and Emergency Services would appear to occupy talkgroups in the 19--- to 20--- range.

I heard the pursuit on the Catoosa SO VHF Channel.

Also it was reported on NewsChannel 9 in good detail!

Catoosa SO tried to make a stop on South I-75 at
GA 2 it went into the city of Tunnel Hill (Whitfield
County) back North I-75 all most to the state line
where the person went off the road, then jumped
a fence into the KOA. A GSP Trooper made the catch
on foot!

From: John Pless <jpless@...>

It's official. East Ridge is going to the Chatt/HamCo 800 system. City Council passed expediture of $105,000 to buy portable radios and a base station. City Officials will meet with Motorola folks tomorrow, Thursday January 21. They'll discuss city needs, equipment etc. I'm told that once purchase orders go in, should take couple weeks. So sometime in February look for some new talk groups ids.
The city was considering keeping it's old outdated UHF equipment, and buying equipment to patch in to the 800mhz system. It would have cost about 90K...it was a stupid idea since they can get full upgrade for a little more. Now, they will abandon their lease on the site which is home to current UHF system. HAMS....this might mean East Ridge may want to sell it's UHF equipment, which I'm told can be modified for 440Mhz use.
The city has also determined it WILL NOT move dispatch operations to the 911 Center on Amnicola Highway. They will instead upgrade CAD systems at it's own HQ. By the way, city residents/businesses pay about $140,000 a year for their "911 Fee" on phone bills. Since right now residents get NOTHING in return for the money they pay on phone bills, it is hoped the 911 Board may one day help East Ridge upgrade it's center with the money it's own residents generate.
One more 800Mhz note. A while back, talkgroup 18992 was active with testing. It was a patch for Hospital Freq 155.340. This talkgroup and others will be for Chattanooga Medcom. I'm told it will really become active in February. An Erlanger ER physician will carry an 800 radio. EMS units wanting to speak directly with physician, NOT nurse or er tech, can use this system. EMS units can operate direct on the 800 system. For units without 800, they can request MEDCOM to patch them onto this. I'm told the city 800mhz gets much better signal into the ER than the hospitals own five chanel system (????)
February should be a good month for keeping tabs on 800 stuff. And sometime, the White Oak and Flat Top Mnt towers should be going up as well...maybe we;ll hear more Motorola guys on tg 17872...if not, radio shop 17840 may get more active.
Later...JPL kg4bod

From: John Pless
Topic: 263 Message: 272

The reason why they skip over a value of 16 has to do with something called "status bits." They are extra bits or numbers attached to talkgroups, that tell the systems main computer "this is a talkgroup that does something special." They range from 1-16. For example, a status bit of 8 attached to a regular talkgroup means "encrypted message." Thats why when you hear a talkgroup in encrypted mode, it's something like 16440, rather than 16432. each bit has a meaning. For example, status bit 1 attached to 16432 would be 16433. That 1 bit means "crosspatch." So if CPD's adam channel is patched together with another talkgroup, the resulting talkgroup all CPD adam units would operate on would be 16433. The same for for 2,3,4,5, etc.
I'm not sure what all the other bits are for, I think they allow crosspatches either with one other single talkgroup, or a combination. It's possible for trunked systems to crosspatch many different talkgroups. From status bit 8 to 15...it's all crosspatching, but in digital modes.
So, the bits are 0 to 15. If I can pull up the list which explains, I'll pass along. This "Bit" system is also why talkgroups are spaced by a value of 32...this allows the use of special features like encryption... thsat require a total domain of 16 units.
I hope this explained some of this! JPL
PS If your trunktracker picks up an "odd" talkgroups ID number... it very well could be crosspatched, or set up to simlucast with anotehr system!

The pursuit I was talking about started in Fort Olge. ended on South Beach at 20th St. when the suspect wrecked and tried to flee on foot. East Ridge and Chattanooga was involved. It happened Sunday morning, early morning hours. Speeds in excess of 90 mph driving a Chevy Cavalier.

What would be the "bit" for Emergency Transmit- the red button on Chatt. PDs radios? I think John needs to hold a class to explain in depth Chatt. TRS.

I have also heard Priority 1 calls dispatched on all Chatt. PD channels except for SWAT and Narcotics, even dispatched on 16784 City Net One and the mutual aid 460.400 Mhz channel. Tip: if scanning conventionally, put 460.400 in a priority channel, enable priority scan and you will not miss the Priority 1 dispatches. Also works for EMS/Fire, etc...

277. Motorola Data-bits

Yahoo group: chattradio
Date: 1999-01-26 11:13:54 UTC
From: Jonathan Guy
Topic: 277 Message: 277

Hi John,

This may be the file you refered to earlier...I think this came from
the
trunk tracker group about 6 or 8 months ago...

What is happening is that your Fire agency is transmitting the Tones and
dispatches on "subsets" of a talkgroup utilizing status bits.

Each talkgroup has 15 bits assigned to it....allowing multiple features
for a
talkgroup (i.e. Multiselect, patches, emergency ID, DES encryption).
This extra
status bit gives additional information to the trunking controller so
that the
additional functionality can be accommodated. Some agencies use these
features
for "hot" dispatches and other functions. Unfortunately, the
trunktracker does
not consider these extra status bits the same talkgroups, & literally
interprets
them as different decimal talkgroups. Your MTS-2000 interprets these
extra
status bits as being a member of the same talkgroup, but with different
functionality. It will therefore receive the transmissions.

Here are the 15 status bits for each talkgroup:

ID+0 Normal Talkgroup
ID+1 All Talkgroup
ID+2 Emergency
ID+3 talkgroup patch to another
ID+4 Emergency Patch
ID+5 Emergency multi-select
ID+6
ID+7 Multi-select (initiated by dispatcher)
ID+8 DES Encryption talkgroup
ID+9 DES All Talkgroup
ID+10 DES Emergency
ID+11 DES Talkgroup patch
ID+12 DES Emergency Patch
ID+13 DES Emergency multi-select
ID+14
ID+15 Multi-select DES TG

For instance, if a radio user hit his emergency button while on talkgroup 1808 (hex 0710) then his further transmissions would be carried on talkgroup 1810 (Emergency is ID+2 from the chart -- 1808 + 2 = 1810) until the emergency status was cleared. If you had your trunktracker on talkgroup 1808, you would miss these calls. The MTS-2000 would catch these
calls because the radio listens to all subsets of those talkgroups.

These status bit features are also helpful for agencies who had employed DES
into the system. Because there is a big difference in price between a DES
encryption enabled repeaters and a regular ones, they probably don't want to
spend the money to enable ALL their repeaters with DES capability. Therefore,
they only have 2 or 3 DES enabled repeaters for the trunked system. So, when a
radio transmits DES encryption, the radio transmits with the DES status bit
(ID+8)...and the controller knows that this radio needs one of the DES enabled
repeaters for communication.

The conclusion? If you want to monitor these communications with your trunk-
tracker, you will need to watch all variations of this fire dispatch talkgroup
to see which status bits they are using for these "hot dispatches." If the
talkgroup is decimal 1808, then watch/monitor 1809, 1810, 1811, 1812 and so on.
When you find which one they are using, add it to your scan list and your

problem is solved.

I'm not sure I'd say that East Ridge residents get "nothing" for their
911 tax dollar. They receive the same "Enhanced 911" that all other
citizens
in Hamilton County receive, they have C.A.D. (Computer Aided Dispatch)
terminals
on the exact same system that almost every other Police agency uses, and
that
almost every other Fire Department uses. Doesn't the 911 board furnish
the
above services to all the agencies? The only thing that East Ridge
really
opt for is a place in the 911 Building...and if you want to get technical

about that, Chattanooga PD and FD consoles, Ham Co EMS/Fire, and Ham Co
Sheriffs
Office consoles were purchase by the respective departments....

Exactly what doesn't East Ridge have that everyone else seems to
enjoy?

P.S. I know that they don't have Hamilton County EMS, but guess
what...
Chattanooga paid a "tarriff" for a couple of years when HC took over from
the Chattanooga Fire Department EMS...unless I'm mistaken, the same type
agreement was in place with Red Bank...

> One more 800Mhz note. A while back, talkgroup 18992 was active with
>testing. It was a patch for Hospital Freq 155.340. This talkgroup and

M.D. 4 was heard talking to Flight Operations this morning on 18992,
a radio check it sounded like...I guess this one is still alive...sure
didn't sound like a patch to 155.340, then again I wasn't listening to
both, just the 800 system...

From: John Pless
Topic: 262 Message: 282

Thanks Jonathan for the status bit info! I saw this list somewhere before, couldn't find it.
I have read that a trunktracker that normaly reads type 2 modes can be programmed to pick up all variations of these status bits.
Instead of monitoring in the type 2 default mode, program your city trunked system to the E1 or type 1 mode. It's the same mode used by private smr systems. But you will have to define your own fleet map. READ MANUAL TO DO THIS! IT'S REALLY EASY! Program each block as either S-1 or S-6. I'm told either works, but S-1 has been prefered by some users.
Once you've programmed the city system as type 1, you'll o course see different ID.s Instead of seeing something like 16432, you'll see something like 203-3. This mode will allow you to hear that talkgroup, no matter how it's status is changed by dispatcher. If anything, it's just a trick for the radio to flash new talkgroups.
One last note, I found a new talkgroup yesterday. It's 18544, and used by CARTA-Incline Railway. They obviously have moved from thier simplex channel 857.9625 to their own talkgroup. I reckon that gives them and CARTA management ability to communicate county wide.
Later...jpl kg4bod

From: John Pless
Topic: 283 Message: 283

I had an after thought about East Ridge. Since we know they'll have five of their own talkgroups..they'll actually have quite a few new "channels." Along with the 5, they'll also get mutual aid 16528, and the three disaster nets that all radios have...making a total of 9 talkgroups. ...jpl

288. Strange sounds

Yahoo group: chattradio
Date: 1999-01-28 10:26:31 UTC
From: ds1968@xxxxxxxxx.xxx
Topic: 288 Message: 288

What's going on with 856.9625 & 857.9625 Mhz? I hear this weird sound on them and they are not being used for voice anymore. It started doing this between last Sunday and yesterday. They are now down to 16 available frequencies at any given instance for voice for at least 50 talkgroups. Is it going to overload the system during the day? Just wondering?!

I havn't had the chance to listen to these in conventional mode... but I will. Is this mostly during the day? I did hear the radio shop talklroup quite active, talking about setting up boards, wires, etc. Is this a telemetry noise? Descibe what kind of noise you get. 857.9625 used to be the Incline RR, but they now use talkgroup 18544. 856.9625 was police simplex called SWAT 2. I don't know if that has changed...but I would think public safety would want at least one or two simplex channels for use during special ops or in places where they can't hit the repeater.
Right now, 12 channels are used for voice/data rotations. The three phone patch channels could also be used in this rotation if system were to ever get swamped.
It would be extremely rare if all channels were used up... but if that did happen, the group with low priority would get bumped. For example, if system got busy during emergency, low priority users like CARTA would get dropped whenever public safety needed an open channel.
One last note. I do remember listening to radio shop on 17840. It was a phone patch, one guy on portable talking to another guy in shop...the repeater stayed open the whole time. I thought this was strange since phone interconnects usually don't show up as a talkgroup? They are obviously doing something to system...jpl

It sounds like a data protocol of some kind and it's 24hrs/day. TrunkTrackers can't follow phone patches voice-wise but it will follow it, when your tt is in "search", on the activity indicators.
I heard DES/DVP on Walker County's Sheriff Main Wednesday night. Didn't know they had that capability. Does Hamilton County use any voice protection?
Sometimes I hear chopped-up audio but the signal strength is good. Dade County is using something that makes the audio sound like a clock ticking, also heard this on Ga. state net.
What else don't I know about the trunked system? I didn't know about SWAT 2 simplex. Are there any other goodies?

**THESE DATA STREAMS ON 856.9625/857.9625 DEFINATLY SOUND LIKE THEIR
PUSHING SOME KIND OF REMOTE/IN FIELD EQUIPMENT. RADIO SHOP HAS BEEN ACTIVE
TALKING ABOUT WORKING ON MODEMS ON "THE MOUNTIAN."

>I heard DES/DVP on Walker County's Sheriff Main Wednesday night. Didn't know
>they had that capability.
***WALKER COUNTY HAS THE CAPABILITY FOR SOME TIME NOW, AT LEAST THE LAST
COUPLE YEARS. HAMILTON COUNTY DOES NOT. THE 800 RADIOS THEY WILL GET WILL
NOT BE ENCRYPTED FOR THE MOST PART. ONLY SUPERVISORS AND DETECTIVES WILL
HAVE ENCRYPTION CAPABILITY WHEN THEY WANT TO CALL IT UP.

Does Hamilton County use any voice protection?
>Sometimes I hear chopped-up audio but the signal strength is good. Dade
County
>is using something that makes the audio sound like a clock ticking, also
heard

Haven't heard these at my location. Will check out with portable during next coupla days.
Are these data streams mixed with any voice traffic or are these 2 freqs dedicated to data.
Could be MDT's using trunked freq in non-trucked mode or upgraded MOSCAD or some other
SCADA type system? Continuous or intermitant data stream? Packet type bursts?

I know some had expressed interest in purchasing some of ERPD's old UHF equipment since it could be modified for 440mhz ham use. But...sorry... instead of bidding it out, I'm told city will use it for public works/ sanitation/ city services. Not sure if they'll use 460.325, or get assigned another freq. But if precedence prevails, they'll use 460.325 for public works. That's what's happened in Atlanta. If you scan the 460-460.625 down there, you'll find school security, school buses, etc.

I just saw some recent updates to the FCC files for city of Chattanooga. There are three new freqs assigned to police dept... but they are in a range I can't cover. They are 2455.5 mhz 2467.5mhz and 2478.5mhz. They don't come up under "Microwave" listings, rather "Land Mobile." They are listed as 5 watts, with and ERP of 39.5 watts. Does anybody have capability to listen in that high up? I'm curious what this might be, since they are running some kind of data now on 856.9625 and 857.9625.
Thanx...jpl

300. freedom of the airwaves?

Yahoo group: chattradio
Date: 1999-02-11 17:00:53 UTC
From: John Pless
Topic: 300 Message: 300

Hey gang!

Check out this piece of pending legislation in the US House. It's aim is to stop the manufacture of scanners capable of monitoring digital messages. As you know right now, monitoring and decoding digital is perfectly legal. Monitoring encryption is not. There are chips out now that will decode digital to analogue... and I do know at least one manufacturer is working on making such a scanner.
It's only a matter of time before all public safty goes digital. There is a natiowide standard called APCO 25. It's an open IMBE standard, so by being open, it should also be open to citizens to listen to.
Citizens have always had the right to hear what their government is doing. If you'd like to voice your opinions about this erosion of the 1934 communications act, contact your congressman! Georgia's Nathan Deal is a sponsor!
What's next? Will amateur bands be one day eroded for "public interests"...read here "spectrum going to highest bidder."
The airwaves have always belonged to the public. Will we loose them?

1st Session

H. R. 514
To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

February 3, 1999
Mrs. WILSON (for herself, Mr. TAUZIN, Mr. MARKEY, Mr. OXLEY, Ms. ESHOO, Mr. DEAL of Georgia, Mr. WYNN, Mrs. CUBIN, Mr. LUTHER, Mr. ROGAN, Mr. SAWYER, Mr. PICKERING, and Mr. GILLMOR) introduced the following bill; which was referred to the Committee on Commerce

---

A BILL
To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `Wireless Privacy Enhancement Act of 1999'.

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) PROHIBITION ON MODIFICATION- Section 302(b) of the Communications Act of 1934 (47 U.S.C. 302a(b)) is amended by inserting before the period at the end thereof the following: `, or modify any such device, equipment, or system in any manner that causes such device, equipment, or system to fail to comply with such regulations'.

(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS- Section 302(d) of such Act (47 U.S.C. 302a(d)) is amended to read as follows:

`(d) EQUIPMENT AUTHORIZATION REGULATIONS-

`(1) PRIVACY PROTECTIONS REQUIRED- The Commission shall prescribe regulations, and review and revise such regulations as necessary in response to subsequent changes in technology or behavior, denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--

`(A) receiving transmissions in the frequencies that are allocated to the domestic cellular radio telecommunications service or the personal communications service;

`(B) readily being altered to receive transmissions in such frequencies;

`(C) being equipped with decoders that--

`(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio; or

`(ii) convert protected paging service transmissions to alphanumeric text; or

`(D) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.

`(2) PRIVACY PROTECTIONS FOR SHARED FREQUENCIES- The Commission shall, with respect to scanning receivers capable of receiving transmissions in frequencies that are used by commercial mobile services and that are shared by public safety users, examine methods, and may prescribe such regulations as may be necessary, to enhance the privacy of users of such frequencies.

`(3) TAMPERING PREVENTION- In prescribing regulations pursuant to paragraph (1), the Commission shall consider defining `capable of readily being altered' to require scanning receivers to be manufactured in a manner that effectively precludes alteration of equipment features and functions as necessary to prevent commerce in devices that may be used unlawfully to intercept or divulge radio communication.

`(4) WARNING LABELS- In prescribing regulations under paragraph (1), the Commission shall consider requiring labels on scanning receivers warning of the prohibitions in Federal law on intentionally intercepting or divulging radio communications.

`(5) DEFINITIONS- As used in this subsection, the term `protected' means secured by an electronic method that is not published or disclosed except to authorized users, as further defined by Commission regulation.'.

(c) IMPLEMENTING REGULATIONS- Within 90 days after the date of enactment of this Act, the Federal Communications Commission shall prescribe amendments to its regulations for the purposes of implementing the amendments made by this section.

SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.

Section 705 of the Communications Act of 1934 (47 U.S.C. 605) is amended--

(1) in the heading of such section, by inserting `interception or' after `unauthorized';

(2) in the first sentence of subsection (a), by striking `Except as authorized by chapter 119, title 18, United States Code, no person' and inserting `No person';

(3) in the second sentence of subsection (a)--

(A) by inserting `intentionally' before `intercept'; and

(B) by striking `and divulge' and inserting `or divulge';

(4) by striking the last sentence of subsection (a) and inserting the following: `Nothing in this subsection prohibits an interception or disclosure of a communication as authorized by chapter 119 of title 18, United States Code.';

(5) in subsection (e)(1)--

(A) by striking `fined not more than $2,000 or'; and

(B) by inserting `or fined under title 18, United States Code,' after `6 months,'; and

(6) in subsection (e)(3), by striking `any violation' and inserting `any receipt, interception, divulgence, publication, or utilization of any communication in violation';

(7) in subsection (e)(4), by striking `any other activity prohibited by subsection (a)' and inserting `any receipt, interception, divulgence, publication, or utilization of any communication in violation of subsection (a)'; and

(8) by adding at the end of subsection (e) the following new paragraph:

`(7) Notwithstanding any other investigative or enforcement activities of any other Federal agency, the Commission shall investigate alleged violations of this section and may proceed to initiate action under section 503 of this Act to impose forfeiture penalties with respect to such violation upon conclusion of the Commission's investigation.'.

Radio shop confirms both are conventional xmsns used in MDT service.

303. New member - Hello, everyone

Yahoo group: chattradio
Date: 1999-02-20 21:29:14 UTC
From: Kelly Lockhart
Topic: 303 Message: 303

I found out about this list from Matthew, and am glad to find a list devoted to two of my professions - TV and radio.

I work full-time as a videograper/editor/director for WTCI-TV 45, our local PBS affiliate. I also edit the Scenic City Radio website (http://www.scenic-city.com/radio), which contains news and information about all the broadcast radio stations in the market.

And if that isn't enough to keep me busy, I also own a web design company that has a couple of media clients - KZ-106 radio (http://www.wskz.com) and Fox 61's Technology Showcase site (http://www.technologyshow.com).

I have been involved with radio since 1986, both as on-air talent and in news, and in television since 1989 as a videographer/editor (mostly freelance, except for now with WTCI).

I look forward to taking part in this mailing list, as well as getting to know the various people involved.

Kelly, welcome to the list. Glad to have you on board. I live in Knoxville
but trravel the Chattanooga area some and follow with much interest the many
changes now
occurring in the local government scene there. It sounds like the migration
to 800
mhz is going more smoothly than did ours several years ago.
By the way...does anyone have Matthew Sadler's new web site & e-mail address?
It appears that the old qsl.net domain is no longer valid.
Thanks!
Thad Osborne

464.725 162.2 Medic One Ambulance Service

Does anyone know if Medic One Ambulance Service still uses this frequency? I was told by an employee that the radios they used were "800 type radios" which I assumed meant that they were on 800 Mhz either trunked or conventional. If this is the frequency that is used please let me know. I am in the process of reprogramming all my scanners to better utilize the radio equipment I have.

Thanks,
Christian KF4ZMB

Alive 95 welcomes Bobby Corona to evenings

(February 24) -- Former APD/MD/Afternoon host Bobby Corona joins Alive 95 for the evening shift as Program Director Roy Jaynes takes the station almost completely live with a mainstream Top 40 format. This makes the third time that Jaynes and Corona have worked together, first in Albequerque, New Mexico at top-rated KKSS - Kiss FM, then at Kicks-FM here in Chattanooga, and now in Cleveland at Alive 95. Expect to see a mjor on-air push to bring Alive 95 into direct competition with Kicks-FM, similar to the tactics used by Jaynes two years ago when he went head-to-head with former Top 40 Star 98 and beat them soundly in the ratings, eventually knocking them completely out of their format.

News/Talk 1150 debuts new morning show

(February 24) -- After nearly six months of replaying the overnight ESPN Radio show during the morning hours, Program Director Bill Lockhart has brought in the syndicated Doug Step han's Good Day program on the News/Talk station. The show debuted this morning and features a mix of serious news and light-hearted entertainment conversation.

KZ-106 unveils newly redesigned website

(February 24) -- After several months of inactivity, the classic rock station unveiled their newly redesigned website today, which incorporates all of their on-air promotions, including a complete list of their Gold Card Plus deals, as well as disc jockey bios, links to local and classic rock websites, and even a history of the station which first signed on in 1978. Interactive features include a mailing list, auctions, and several features still in development. Webmaster Kelly Lockhart of Scenic City Online said, "We are working with a major Internet site to develop a full 24-hour chat site that will have links at over 800 radio station around the country, as well as developing other interactive services that will make the KZ-106 site a place to come to on a regular basis." The website address is www.wskz.com

Talk 102.3 brings back Scott Ferrall

(February 24) -- Less than two months after New York sports talk show host Scott Ferrall was dropped from the Talk 102.3 lineup, listener demands have convinced station management to bring the program back. Ferrall's On The Bench progam had been replaced by a re-play of the previous night's Art Bell Coast to Coast program, but the number of calls, emails, and faxes to the station made it clear that Ferrall's rather unique presentation of sports talk was clearly missed.

The new evening lineup for the station has the syndicated John & Ken Show following SportTalk from 7:00pm to 10:00pm, then Ferrall till 1:00am, and then all five hours of the Art Bell program.

Latest Arbitron ratings released

(February 13) -- The latest market ratings for Chattanooga were released this past week, the Fall 1998 Arbitron Radio Market Report. In the 12+ AQH Monday through Sunday 6am to Midnight rankings, the overall station results show some interesting changes.

Market leader Country US-101 remains healthily ahead of the rest of the radio pack, easily holding on to first place and moving up over a full share from a 17.6 to an 18.8. New Program Director Chris Huff comes into a station that is celebrating a year in which they won their fourth consecutive CMA Station of the Year (Small Market) award.

In second place, up half a share based on the strength of their increasingly popular John Boy & Billy morning show, Classic Rock KZ-106 continues to to build as they enter their third decade of playing rock-n-roll. Adult Contemporary Sunny 92.3 drops a bit, from an 8.2 to a 7.7 and places in a tie with Urban Power 94, which also has a fall in ratings with a full point drop from an 8.7 to a 7.7.

Adult Alternative 96.5 The Mountain has the largest ratings slide in the market, falling nearly two shares from a station high of an 8.1 down to a 6.6. Much of this can be attributed to them having lost their popular Jack & Jason morning show and then playing musical chairs in the morning hours until the current team of Bruce Brady & Cindy arrived in January. In sixth place, Talk 102.3 moves up nearly a full share from a 4.0 to a 4.9 behind the strongest lineup of local talk talent the market has seen in some time.

The second biggest ratings drop in the market lands Top 40 Kicks-FM in seventh place, following their recent sale and format change. The station, which had grown over the past two years from near the bottom of the pack to the top five with a Rhythmic based format, has had a rough adjustment with their new mainstream format, dropping from a record high of a 6.7 down to a 4.5.

Rounding out the top ten, Oldies 107.9 faltered a bit, dropping six-tenths of a share from a 4.4 to a 3.8, while Nostalgia Unforgettable AM 1310 and Adult Contemporary Lite Mix 105 end up tied for ninth each with a 3.7 share, which is a small step forward for both stations.

Mike Anthony takes over Programming reins at J103

(March 2) -- Program Director Mike Anthony departs Classic Country WSGC-FM 101.9, The Country Giant to assume the same duties at Contemporary Christian WBDX, J103, effective this week. In light of his departure from the struggling country outlet, rumors are already swirling that a format change is likely in the very near future. If so, this would be the sixth format change for the Ringgold station in the last three years.

ARES (Amateur Radio Emergency Service) in Hamilton County
is undergoing a renewal phase.
Training classes every month, quarterly training exercises,
updating membership rolls thru reregistration & new ID cards,
a new call sign for ARES operation and strengthened working
relationships with served agencies.

I am proud to announce the appointment of the first of several
new AEC's in Hamilton County, TN. The AEC's & EC will form the
Executive council, working to provide direction ,training,
guidance & growth to the local organization.

Our first AEC is Chris Palmgren W4ORS. Chris is active in several
areas of amateur public service. Very active in SKYWARN storm
spotting & metro/enviroment science in general, partially due to
his career in television news (he work behind the scenes at TV9).
UHF/VHF DX & public service net are some of his other interests.
He serves not only as President of the growing OARS club which
serves Hamilton/Bradley/Polk counties but acts as web master for it's
interesting web page (http://www.qsl.net/wd4oar). Congratulations
Chris on your appointment, we're expecting big things from you.

If you've received this e-mail you soon will get another with contact
information for ARES in general and Chris & I in particular.

Dewey Bryant KD4EHC
Hamilton County EC

Advanced Skywarn Storm Spotter Class

TAG Skywarn in an association with the National Weather Service in Morristown, TN, is offering the very first Advanced Skywarn Storm Spotter Class on Saturday, April 10, 1999, from 10 am - 4 pm with a lunch break. The class will be held at Memorial Hospital in Chattanooga. The class will be taught by Howard Waldron, NWS Morristown Warning Coordination Meteorologist, and the class is open to those who have been certified by the NWS for having completed the Intermediate and Basic Storm Spotter course. People wanting to upgrade to the advance status will be the priority. Those persons having already taken the advance course will be permitted on a secondary basis due to limited seating. For more information and to sign-up for the course, please contact "Boots", N4MKG, during the weekly TAG Skywarn Training Net held every Tuesday night at 8 pm ET on the W4AM 146.610- repeater Lookout Mountain, TN, or send e-mail to Dewey Bryant, Hamilton Co. EC at kd4ehc@... .

323. "Near Miss" on EMS 155.340

Yahoo group: chattradio
Date: 1999-03-19 07:24:54 UTC
From: K4YZ@xxx.xxx
Topic: 323 Message: 323

Greetings everyone,

I am Steve Robeson. An emergency nurse at Hutcheson Medical Center in Ft Oglethorpe (KXX319) and an Amateur radio operator (K4YZ).

One of the things that really upsets me is the wide spread lack of professional radio technique on the medical frequencies in and around Chattanooga area. This is usually manifested in hospitals responding to calling ambulances with "Unit calling go ahead...". Just the day before yesterday I overheard TWO hospitals acknowledge ONE ambulance's incomming report. Thankfully no medical orders were given. Can you imagine the Paramedic responding to an order not meant for him?

On each and every transmission I make from "The Hutch" I identify the unit I am talking to and who I am....that way if I relay a Doctor's order to them, no one else will misunderstand who the order is intended for and who is issuing it. IE: "Medic 6, this is Hutcheson, per Dr. So-and-so give Morphine, 2 mg IV push." They know who I was talking to, what to give, and who ordered it...no questions.

I post this in hopes that other Chattanooga area readers might pass a bit of this on if they know other ER nurses, they might pass on some of these tips....it only takes a few more seconds to do, and reduces the chances that someone will give the wrong medicine to the wrong patient!

Also, if you think you copy me on one of the radio reports from the Hutch (I work nights), send a QSL card to my home ham radio call and I will send an SWL report for the Hospital!

73

Steve Robeson, LPN, K4YZ

Kelly,

WSGC-FM just joined the satellite network and began programming as "102 K-WIN" around 11 PM tonight playing rock oldies.

Therefore, the TV themes was short lived. Well, there are only a handful of hit TV themes compared to all the rock oldies hits and WSGC was repeating theme songs quite a bit while in the interim. Oh, well...it was cool while it lasted! I did manage to record a few of them. :-)

Chris

They started a simulcast last night with WKWN in Trenton ("K-WIN") using

the Westwood One rock oldies satellite feed.

I didn';t hear the call. But SWAT 1 is talkgroup 16880. SWAT 2 used to be 856.9625 simplex. Since that frequency now transmits data, I can only assume the SWAT 2 simplex channel has moved to either 856.7625, 858.9625, or 859.9625. They would have to be on one of the frequencies not used in normal trunking sequence. 857/858/859.7625 are phoen interconnect freqs. I've noticed anytime there is a SWAT operation, they chat car to car on 16880.... before they go simplex on scene. I have monitored a couple operations that stayed on 16880, and DID NOT go simplex.

Yes, We (East Ridge) are still going to 800. We already have the
radios, but dispatch is moving to the 911 center in about 45 days. Or so
they say. At that time we will make the move.

331. Chattanooga Talk Radio changes galore

Yahoo group: chattradio
Date: 1999-03-26 22:06:09 UTC
From: Kelly Lockhart
Topic: 331 Message: 331

From the Scenic City Radio website (www.scenic-city.com/radio)

(March 26) -- WGOW-AM, News Talk 1150 Program Director Bill Lockhart announced today that syndicated talkshow host Dr. Laura Schlessinger will rejoin the station for the 3:00 to 6:00 afternoon shift effective Thursday, April 1st. Dr. Laura had been replaced by G. Gordon Liddy several months ago when Dr. Laura's syndicaters raised their rates, pricing themselves out of a number of small markets. Lockhart, in an interview with Scenic City Radio, said that he had never stopped negotiating with the syndicaters in an effort to get the popular self-help advice program back on the airwaves.

With Dr. Laura coming back, financial talkshow host Dave Ramsey will move over to WGOW-FM, Talk 102.3 and air for one hour, from 2:00 to 3:00 in the afternoon. Making space for Ramsey, local host Stephanie Birmingham loses one hour of her show, and will be heard from 1:00 to 2:00 in the afternoon. Also, syndicated evening hosts John & Ken will be taking over mornings at KABC in Los Angeles May 21st, at which time they will end their national program. Lockhart is currently researching other programs to air in the 7:00 to 10:00 evening slot, but as yet no decision has been made.

334. Talk group 19056?

Yahoo group: chattradio
Date: 1999-03-30 23:26:35 UTC
From: Jim Knight
Topic: 334 Message: 334

Does anyone know if 19056 is an active talk group on the Chattanooga trunked system? It's a valid number since it's divisible by 16. My scanner stopped on it today but there was no audio and then I never saw it again. It could have been invalid data but normally when I have seen invalid data in the past the group number wasn't a multiple of 16. Just thought I'd ask if anyone has heard anything on this one.
Also, today I heard digital signals on 17712 at various times, and voice communications also. Do they use this to signal valves to open or some such thing, and if so, do the people who use it for voice communications have to listen to the digital stuff?

Couple other talk groups from East Ridge.
19088 is car to car
19120 is CID
19056 will be main channel once they get going.
Here's the latest I've gotten from East Ridge. They were going to get their own console, and upgrade their current center. That has once again changed. On April 8th, the city council will vote on a measure to move all dispatch funtions to the 911 Center on Amnicola Highway. If that's approved, then the 911 board will vote to bring East Ridge to the center in their next meeting April 14th. If that's approved, who knows how long the mountian of beaurocracy will take to move to get East Ridge there. I'm told 30 days...I'll believe it when I see it.
East Ridge will have to cough up money to buy the electronic components inside a console at the center. 911 will provide furniture/hardware etc. This new console will be for police only. The idea now (again, it'll probably change 5 more times knowing East Ridge) is to have County Emergency Services dispatch ER Fire Dept (like they do for Red Bank and other volunteer depts.) from their consoles. I also found out from a source in the dept and has been confirmed by higher ups that East Ridge is NOT getting mobile radios installed in cars as originally planned. And they did get the "cheapy" 800 portables that do NOT have speaker mikes like Chattanooga's. This means I guess officers are supposed to carry radios in hand.
Speaking of beaurocracy, the third 800mhz site (White Oak Mnt) that has been stalled the last year is again in limbo. Last spring, an artcle in the paper quoted an official as saying ground breaking would be in the next few weeks. Never happened. Then, sheriff was told groundbreaking would be in September 1998, and he'd be online March 99. Never happened. The official who said last spring it would go up has again said it's supposed to start the next 30 days (a month ago). Again, never happened.
Folks, the money has been there. The county floated $3 million in bonds for the site and field equipment March a year ago. I have also heard, they are still haggling over price of equipment w/dealers! I cannot get straight answers from anyone about this. Everybody says talk to so and so.... and I'm going in circles. Does anybody have the real scoop? What ever happened to the money for this? Did it get transfered to another county budgeted item? Did it help balance budget for another county dept. in the hole? I'd love to get the details!

340. 800 SMR system

Yahoo group: chattradio
Date: 1999-03-31 16:42:31 UTC
From: John Pless
Topic: 340 Message: 340

Somebody once posted a message requesting all the freqs for Chattanooga's second smr trunking system. Sorry I didn't get back so soon, but here it is. On trunktracker, use fleet map 8 since this is a type 1 system. 23 frequencies total. Some link to a system in Cleveland. Some are used for simplex. There are NO phone interconects.

851.0125
851.0375
851.1875
851.2125
851.2375
851.2875
851.3375
851.5875
851.8375
852.6375
852.9625
853.0125
853.8625
854.0875
854.1375
854.2875
854.3125
854.7375
861.2125
862.2125
863.2125
864.2125
865.2125
Lots of towing companies, transport etc. Medic One Ambulance Service uses talkgroup 23-1. Chattanooga Ambulance-Memorial EMS uses 24-1 for admin stuff. Chattanooga's newspaper uses 201-1/201-2/201-3. Hundreds of other users.
On the Nextel system, also fleetmap 8. 20 channels total.
856-865.0125
856-860.5125
861-865.3875
Erlanger Health Systems/AMR Ambulance service talkgroup is 204-1. And there are also hundreds of users here, a lot of trucking companies, a utility or two, and a couple cable systems. This system does have telephone interconnect.

What about 16528 Mutual Aid? Red Bank has that in theirs. CID?? Is that like 16496 Info Channel?
The "cheapie" radios will not go over well with officers. I know the shoulder mike is a lot easier to hear and talk into quietly. Why have radios installed in cars? Wouldn't that be more expensive? It's better to have the radio with you without having to go though a vehicle repeater. And the hand-held radio (theoretically) works while in foot pursuit. Just my 1 cent worth.

I have never heard anything over the 800 Mhz National Law Enforcement frequencies, but the 155.475 Mhz National Law Enforcement channel is in use in this area.

For instance Fort Oglethorpe PD uses it quite a bit for interdepartment communications, and Walker and Catoosa counties use it for joint DUI Taskforce activities.

-------- Original Message --------
Subject: [ARES-RACES] Amateur operators to boycott Swatch AG
Date: Sat, 3 Apr 1999 21:25:57 -0500 (EST)
From: Rob Carlson <rcarls2@...>
Reply-To: Rob Carlson <rcarls2@...>
Organization: University of Maryland Baltimore County
To: 2m@..., ares-races@...

Dear editors, Loop readers, list readers, and assorted amateur friends,

Over the past week I have received an incredible response to my query in the Hudson Division's Hudson Loop newsletter about a curious advertisement on the Swatch web-site. To help advertise their new brand of "Swatch time" watches, they appeared to be launching a satellite which would broadcast the voice messages of web readers into space and back to earth over radio on the frequencies from 145.800 to 146.000 MHz.

Thanks to the excellent researching skills of Stephan Anderman, K2SMA, and Rick Lindquist, N1RL, I've discovered that Swatch in cooperation with the Russian space authorities have decided to use the two meter Amateur band for direct advertising via the "Beatnik" satellite (a mini-Sputnik and AMSAT-FR project formerly to be known as RS-19) across the entire world.

According to AMSAT-France, during the construction of the satellite, the Russian space center had made a separate commercial contract with the Swatch watch company to put its messages on the satellite. This was done in spite of AMSAT objections and contractual agreements with them not to put commercial advertising content in the digital messages. AMSAT-FR couldn't back out of their own contract and had to forward the parts on to the space center.

Riley Hollingsworth, K4ZDH, is doing his best to crack down on unlicensed and unbecoming operations within the jurisdiction of the FCC, but soon an egregious violation of the non-commercial status of amateur radio will begin taking place just a few miles above our heads when our two meter band is filled with advertisements for the latest Swatch watches.

Bernard Pidoux, F6BVP, writes that we should do our best to ignore the satellite and not do anything to assist Swatch, such as tracking and publishing the Keplerian elements of this rogue mini-sat. I completely agree, but I believe it's necessary to go even further than that.

Just as we've successfully done in response to Little LEOs and APCO proposals in the past, it's time for amateur operators around the world to let Swatch AG and the Russian space program know just how precious our bands are to us.

The first step is a comprehensive boycott of Swatch products. If you were considering the purchase of a Swatch watch for you or someone else, please take a moment to consider some of the other watch manufacturers who are not stealing away ham frequencies.

Next is to write a letter off to the Swatch company explaining why you made your purchase decision away from their products, and how you feel about this intrusion on the amateur bands. Use this address from their web-site registration as a starting point. If anyone knows the name of particular individuals within Swatch that the letters could be personally addressed to, please let me know.

Swatch AG
Jakob-Stampfli-Strasse 94
2504 Bienne
CH

As I understand it, the Russian space center will be able to upload voice data in ten message batches, so it's possible that under pressure from Swatch, they could "pull" these commercial advertisements off the ham bands at any time during the 30 day life, even while the satellite is still operational. This is all the more reason to make it clear to Swatch how strongly the amateur community feels about this issue right now!

Also, if you come across any amateur's page this month containing the Keplerian data or any mention of the Sputnik-99, let them know what Swatch is doing and encourage them to remove them as soon as possible.

I'll be maintaining a web site concerning the latest news in this problem at http://rob.carlson.org/swatch-protest, which will start with this letter. More news will be posted here and placed on the web site as I hear about it. If you have any information, please feel free to e-mail me at rcarls2@... or kc2aei@..., or call me at (410) 455-3192 at any time.

Please forward this message as necessary so that we can inform as many amateur operators worldwide as possible about this problem.

73 and good luck,
Rob Carlson, KC2AEI

346. MDT Frequencies Question

Yahoo group: chattradio
Date: 1999-04-05 19:41:48 UTC
From: LFDGAJR@xxx.xxx
Topic: 346 Message: 346

Does anyone know what frequencies MDTs can run on? Is there a specific frequency range or can they run on any available frequencies that the communications administrator sets them up on?

Also does anyone know the frequencies used by local agancies that use MDTs? Also what agencies use MDTs in this area, and can they legally be decoded?

Thanks,
Christian KF4ZMB

347. MDTs are coming to Walker County

Yahoo group: chattradio
Date: 1999-04-05 19:41:45 UTC
From: LFDGAJR@xxx.xxx
Topic: 347 Message: 347

I have been advised by the commander of the Traffic Accident Prevention team with the Walker County Sheriff's Office that they are in the process of purchasing and installing MDTs in the TAP Unit cars. They may install MDTs in the other patrol cars as funds become available. The 911 Director of Walker County has told me that the 911 center was set up to handle MDTs and other devices when it was built but Walker county is just now installing the first MDTs in units.

Does anyone know anymore about this? How about you John have you heard anything? I'll try to supply people with more info about these MDTs as I find out more.

I've got a hunch that this may be what their new frequency, 160.170 MHz,
may be used for. As far as frequency limitations on MDTs, there aren't
any really. In Chattanooga, 800 was used probably just because it fit in
better with the whole scheme of things, but one could use VHF or UHF
(doubt they'd use low band since skip might cause trouble).

351. Re: MDT Frequencies Question

Yahoo group: chattradio
Date: 1999-04-05 20:12:19 UTC
From: John Pless
Topic: 346 Message: 351

MDT's can be used pretty much on any frequency. But most systems
are being built on an 800mhz conventional repeater. I'll try checking FCC
files for any new listings.
It is also possible they will use a cellular system link. Several large
public safety agencies are working off of cellular systems, and have worked
out service agreements w/phone companies.
And again, given the terrain in North Georgia, they may work off of a VHF
system. If you know someone in the department, ask them if you can see the
unit, and the antenna. If you see a new antenna installed, it will give you
the clue you need to find the band.
As to the legality of monitoring these systems....it's a grey area. Many
will say as long as the data is NOT encrypted it's ok. The best advice here
is to keep quiet on this one, and don't divulge any info to a third party.
There are several programs out there you can download, that will work in a
computer/laptop. You would then need to tap into the discriminator out of
your scanner to get data stream. I WOULD FIRST CHECK OUT ANY LAWS IN
GEORGIA FIRST!
Finally, the only agencies I know of now that use mdts are Chatt pd.
Hamilton County EMS wants to get them.... but that's a budget "wish list"
item to go along w/ proposed vehicular locators.

Newington CT April 7, 1999
To all radio amateurs

SB QST ARL ARLB024
ARLB024 FCC Issues Strengthened Scanner Receiver Rules

The FCC has amended its rules to strengthen existing prohibitions on scanning receivers that can receive cellular telephone transmissions. While the new rules contain specific exemptions for the Amateur Service, they will have important ramifications for the manufacture of new Amateur Radio equipment that scans frequencies outside the ham bands.

The new rules--released March 31 in a Report and Order--broaden the definition of a scanning receiver to include receivers that automatically switch among two or more frequencies between 30 and 960 MHz and are capable of stopping at and receiving a detected signal. Still exempted are receivers designed solely for operation as a part of a licensed station. In response to an ARRL request, the FCC clarified that the rules do not apply to Amateur Service receivers unless they cover frequencies outside the ham bands.

The FCC also widened its definition of ''test equipment'' exempted from the cellular reception restriction. The adopted definition defines test equipment by function, rather than by end user as proposed, thus permitting sale to the general public.

Receivers that allow reception of cellular frequencies because of their poor image response would be illegal under the new rules. As it proposed, the Commission adopted a 38 dB rejection standard for signals in the cellular bands ''for any frequency to which the receiver can be tuned.''

The FCC abandoned a proposal to require manufacturers to limit reception of cellular service frequencies by ''direct pickup'' through the cabinet. The FCC also backed away from a proposal that could have required epoxy potting and nonremovable components to prevent scanner modification. The League had argued that this could raise the cost of buying and repairing equipment and could preclude ham gear modification for CAP and MARS or for experimental purposes.

The FCC adopted a more generalized requirement that receivers be designed so that tuning, control circuits, and filtering be inaccessible, and that the design be such that any attempted modification would render the receiver inoperative.

The new FCC rules also prohibit modification of scanning receivers as a business or on an ongoing basis ''regardless of the date of manufacture or number of units modified.'' The Commission also said modification of any scanning receiver is prohibited and invalidates the equipment authorization. New, permanent labels on scanning receivers also will be required.

Kits for scanning receivers would be treated the same as assembled equipment. The Commission said that ham radio scanning receivers ''already cover frequency ranges needed by amateurs'' and a prohibition against scanner kits ''will not impact frequency converter kits used to expand the frequencies covered by amateur equipment.'' The League plans to look closely at this provision to make sure it will not prevent amateur manufacturers from producing legitimate transverting equipment.

The FCC said it was modifying its rules ''to clarify that the prohibition on modifying scanning receivers to receive Cellular Service transmissions contained in Section 15.121 overrides the home built device provisions of Section 15.23.''

The proposed new rules become effective due 30 days after their publication in the Federal Register. But the FCC said it will include ''transitional provisions in our rules to allow the acceptance of equipment certification applications for scanning receivers under the current rules for up to 90 days after the publication of the R&O.

A copy of the Report and Order is available at http://www2.arrl.org/announce/et98-RandO.html.

ARLS002 ARRL Advises Swatch to Cancel "Beatnik" Launch

ZCZC AS02
QST de W1AW
Space Bulletin 002 ARLS002
>From ARRL Headquarters
Newington, CT April 7, 1999
To all radio amateurs

SB SPACE ARL ARLS002
ARLS002 ARRL Advises Swatch to Cancel "Beatnik" Launch

The ARRL has weighed into the burgeoning controversy over messages gathered by the Swatch watch company and programmed for transmission on 2 meters from the mini-Sputnik satellite. In a fax today, League Executive Vice President David Sumner, K1ZZ, suggested to Swatch Group CEO Nicolas E. Hayek that the Swiss firm cancel the launch of the "Beatnik" satellite and use a commercial satellite for its project instead.

"The Amateur Radio community must stand against the 'Beatnik' satellite because it represents such an undesirable precedent," Sumner said. He proposed that Swatch cancel the launch, planned for April 16 from the Russian Mir space station, and fulfill its commitment to transmit messages from space using excess capacity on a commercial satellite.

Over the past week, an increasing number of voices from among the amateur community have been raised in protest against plans for the mini-Sputnik to transmit messages related to the Swatch company's campaign to establish the "Swatch Beat" as a new "global concept of time." Via its Web site, Swatch reports it has solicited more than 5000 messages--including voice and text files--for possible transmission on the new satellite. Messages selected for use were supposed to include a reference to the "beat" theme.

Sumner pointed out that international regulations define the amateur service as one engaged in by "duly authorized persons interested in radio technique solely with a personal aim and without pecuniary

interest." He told Swatch that canceling the launch and owning up to its mistake would "go a very long way toward repairing the damage that has been done to your company's image."

Swatch has acknowledged the amateurs' complaints and has included several on its Web site. It also has opened an e-mail comment box to gather opinions on "Should we send your messages into space?" But the company says the messages the satellite will send "are not advertising and do not contain the brand name Swatch." The company asserts that its campaign also provides "a great opportunity for Amateur Radio to gain an even wider audience." The company has promised to post the "final list" of messages sent for transmission by the satellite.

AMSAT-France has distanced itself from the soon-to-be-launched mini-Sputnik. AMSAT-France President Bernard Pidoux, F6BVP, has apologized for AMSAT-France's role in the situation and called on AMSAT organizations to refrain from describing the satellite's messages and to discourage listening "to this nonamateur-compliant satellite using our amateur band." AMSAT-France had contracted with AMSAT-Russia--with help from the Russian Space Flight Control Center (SCSC)--to build the RF and electronics modules for the new satellite. AMSAT-Russia was responsible for building the satellite frame, integrating the electronics, and programming the messages the satellite would transmit on 2-meters, Pidoux said.

After the contract was signed, Pidoux said, AMSAT-France found out that the SCSC had made a separate commercial contract with Swatch to put its "beat" messages on the satellite. AMSAT-France protested, citing contract provisions prohibiting "direct advertising" on the air, but it completed its part of the contract to avoid a lawsuit, Pidoux said.

AMSAT-Russia President Eugene Labutin, RA3APR, said the Space Flight Control Center signed the Swatch contract "under the name of AMSAT-R" and did not inform AMSAT-Russia what they were doing. He apologized on behalf of AMSAT-Russia.

The new Sputnik-99 satellite arrived on Mir aboard a Progress rocket April 4. It will carry a 100-mW transmitter and transmit on or about 145.815 MHz. The satellite will have an approximately 30-day life span. It will be able to transmit up to 10 different voice messages in addition to digital messages and telemetry. Data will include battery voltage and internal temperature.

357. 18514 TG?

Yahoo group: chattradio
Date: 1999-04-08 10:02:37 UTC
From: Dave (Skaarj)
Topic: 357 Message: 357

I heard CARTA traffic on 18514. I know it is not divisable by 16.
Therefore, do CARTA radios have an emergency button like PD radios have
(18512+2)? I heard two different conversations at two different times
yesterday afternoon and I pressed "search" multiple times to make sure
that the same talkgroup was showing up. The conversations were not
emergency in nature.
Do Chattanooga\Hamilton County school buses have radios, if so what
freq\tg?
Thanks in advance!

Bobby Byrd got the "Captain" nickname back when he was a morning disc jockey and well before
he ever got into the air traffic business.

Personally, I prefer Butch Johnson and Jerry Howell's traffic coverage - of course, having an
airplane up there every day helps a lot instead of just depending on a collection of scanners.

Is Butch Johnson's radio frequency 472.0125? I've heard it on my
scanner, commercials and all, but it doesn't seem to be listed anywhere I
know of.

I know that he use several freqs to communicate with their client stations -
live feed to WSKZ & WOGT, another one for the TV station (I forget which one he
is on), and then two more for their pre-recorded feeds.

Chattanooga Air Traffic Network phone number is 875-8079, if memory serves.
He's in the air right now, or I'd call him myself and ask.

What you're picking up is an image of (probably) one of the 450 MHz
images. These are generated internally in your scanner. Frequencies I've
noted in use are as follows:

464.025, 464.725 - these are shared with other users, notably 464.725 is
shared with Medic One Ambulance Service.

See my page at http://www.qsl.net/kf4lhp/media.html for more
frequencies.

The talk group you heard was 18512, with a status "nibble" of two added. That means the Care A Van talkgroup was patched with another one for the time being. With 800 trunking, it's posible to patch anyone together. Even say, a CARTA group with a PD group.

No - it decided to take the week off and head to the Bahamas. The last time it was seen, it was hanging out on the beach in Freeport, Jamaica surrounded by a bevy of cute little IMacs guzzling can after can of ice-cold Red Stripe while comtemplating its future plans.

Okay, so it is working, but I like my theory better... :-)

372. Police Call

Yahoo group: chattradio
Date: 1999-04-13 00:09:38 UTC
From: Jim Knight
Topic: 372 Message: 372

I was in Radio Shack this weekend and looked at the latest issue of Police Call. It had a list of Chattanooga TRS talk groups, most of which I am familiar with and have seen listed in this group and on Matthew's web page. However it also listed 16400 as "Adam/Baker crosspatch" or some similar description, and 17264 as "Fireground 3". Has anyone ever heard either of these two? It makes me wonder where Police Call got the info.

Ok, here goes...Police Call -AND- the bearcat trunk tracker page both
list these
as active talk groups. I'm wondering if these are some of the "plants"
added to the
lists to discern if someone is illegally plagerizing the copyrighted
works...(probably
not, but I'll give it the benefit of the doubt)...

These appear to have come from the same individual (I've seen
"credit" given in
a couple places to someone)...I think they're just simple "guesstimates"
gone awry...
My trunktracker has stopped on 16400 a couple of times, but it isn't a
cross-patch...
just the scanner incorrectly interpreting the talkgroup...If you look at
this "fireground3" talkgroup, it is the only blank talkgroup available
between FG2 and the CARTA dispatch talkgroups...logical conclusion?
Perhaps, however, until it is confirmed
it shouldn't be submitted for publication, or published...

About the 16400...it doesn't exist as of now.
As to 17264...possible. A high up source in the fd says they will be adding several new talkgroups sometime in the not too distant future. This is supposed to inculde more fireground freqs. We'll just have to wait and see....jpl

Sometimes you just have to wonder how many talkgroups are really
needed...
I'd say Fireground3 is a good possiblity in the future, but I'd say it
would be well
after the Sheriff's Office comes up on the trunk system...there are alot
of fire radios
that would have to be reprogrammed to use it...

Btw, good to see you at the OARS meeting last night.

I do like Kelly's theory...but I found out my computer has gone beyond that. It was indeed in Freeport, with Imac's guzzling red stripe. However, wedged in between the right and left click buttons of their "mice" were big fat jamaican joints rolled the size of cuban cigars. This helps explain some of the weird things my computer does at times. In fact, it has a mind of it's own.

As has become almost a tradition on other mailing lists, here's a new
rule for the convenience of all:

Please do not post attachments to the list. Some of us have poor-grade
phone lines that make data transfer slow (on a good day) and others use
Juno or other text-only email services.

Thanks.

Hi gang?I'm new to milcom list. On the coast in LA, CA.

Did anyone in SoCal listen in on the missile launch off the coast tonight (19:00- 20:30 local PDT)?
"WAVERIDER 801" (P-3?) talking to Delta control on 268.8.
WAVERIDER launched a missile which flew to a waypoint, turned, and flew to a target (which it hit). They had cleared him for a "GPS only" launch and during the flight, Waverider wanted to "change polarity". Delta wouldn't let him "change polarity" until the missile was greater than 10 NM.

After the launch, WAVERIDER wanted to RTB (Mugu I assume) but weather was 100' overcast. No PAR. They talked about China Lake and then about trying an approach, they were having TACAN trouble and I lost them as they got north behind the mountains.

There was also a GREY KNIGHT Holding on the range while the launch was in progress but he didn't seem to have anything to do with it. Went to North Island, I believe.

LONEWOLF 46 and 46 also around at the same time went to North Island.

TV news showed the Coronado off shore participating in urban assault exercises at Pendelton.

Hi to "Stidge" and the stealth plonker "Stagger Lee".

Subject: [MilCom] 11175 very loud copy yesterday

Yesterday 14/4/99 I was wandering around outside, and had my MVT-7100 with me. While listening to this and that I went onto HF and heard a very strong loud signal on 11175 using just the telescopic antenna.

This was at 15:45z... Blue 31 very loud... called Croughton saying he was carrying 4 German Tornados and requested that Croughton call the Tornados' base on (phone number & extension) telling them to expect 4 Tornados at 21:00 local time.

From: Frank Carr <fcarr@...>
Subject: [MilCom] New to the list and military comms.

Hello Everyone,

Sorry for this post but I have just joined the list and am very
new to military coms.

Could anyone give me any frequencies of interest that I can pick
up here in the north of England?

At the moment I listen to 5.206 which is a training net, and I have
heard what I think are Nato transmissions on the following frequencies,
4.833, 6,993, 8.992, 11.175, 11.220, 13.200, 16.442 and this morning
I have heard a lot of traffic on 4.742 which I think is the RAF.

Any hints/tips or frequencies would be a big help.

Thanks.

From: ken windyka <ken.windyka@...>
Subject: [MilCom] FBI Warns CONUS US Military Personnel

A report on NBC news states that the FBI is warning CONUS based military personnel of the potential of a terrorist attack by extremist pro Yugoslovian groups....

This is of interest to MILCOM from an "on scene" monitoring perspective & potential comm intelligence assistance to US Authorities.

On Scene Monitoring Wise ---- You all might want to check with your life insurance company to see if they would cover your possible (but highly unlikely) death (most have war clause (declared or undeclared) exclusions) in the event you get caught in the cross fire between the military and the terrorist group. This is a serious matter not to be taken lightly by folks who like to spend time next to the military base fence line, enjoying the sound & sight of military aircraft. Ain't the best of times to be doing this sort of activity!!

Potential Communications Intelligence Assistance (special emphasis on folks next to active, guard, & reserve military bases) ---- Well this would be tough because of the lack of understanding the language that might be used, BUT anything is possible by monitoring those low power business, GMRS, family radio service, 49 mhz low power, CB Radio, etc.... I think many hard core monitoring hobbyists have a good idea as to the typical radio traffic patterns around their monitoring command posts and at least have the capability to differentiate what is out of the ordinary and attempt to audio tape the transmissions for potential review/analysis by federal officials..... Of course becoming "high profile" with a federal agency (FBI) by reporting potential suspecious radio activity may be too stressful for some, who may be thinking about the Atlanta Olympic bombing, were the hero (security guy) becomes the suspect & is victimize twice. Anyways, that's for each hobbyist to decide...

From: Jeff Haverlah <jehaverlah@...>
Subject: [MilCom] 11175.0 - SYSTEMIC

1615z 16 Apr 99

11175.0 was active at 1609z with SYSTEMIC (fair/weak levels here) calling MAINSAIL and raising MCCLELLAN (weak and mostly unreadable here) for a phonepatch to a DSN 339 number maybe id'd as "___Key Shop" or somesuch for a brief inquiry about an unspecified part and gone. At 1617z

SYSTEMIC called and worked MCCLELLAN for another phonepatch to the same DSN number to let them know that they'd be on deck in an hour and 10 minutes and into chatter about an individual's "last flight" and maybe something about the [sounds like "anchors"] who would meet him for his "last flight" [maybe, mostly weak here] and gone. At 1623z SYSTEMIC was back up with another phonepatch to another DSN 339 number to set up a data link (suggested CHARLIE BRAVO) but apparently the ground party was the incorrect location for this. SYSTEMIC became unsure about the correct number for this, and then mentioned DSN 339 4528 (at one time id'd as VQ4 OPCON).

Subject: [MilCom] Off-topic..answers to all those questions!

To all those who responded to my first message:

Wow.. Thanks for warm welcome everyone!
Sorry to catch you by surprise there, Stidge. Hope you were wearing an old pair of pants.

There were lot's of questions in those responses. Let's see if I can answer them all in one shot:

Some of you may already know me, if not by name (Dave Cibley) then maybe by sight - at least those of you who hang out at the end of runways. I've been around a long time. Stidge and I go back to 1987 or so, and we were both runway rats long before we met.

I live in the Brentwood area of LA. On the hillside just below the Getty Museum. It's a good spot for monitoring south, east, and west. Palmdale, Edwards, and Mugu are all north and a total loss cuz of the mountains. I can see Catalina and the ships going in and out of Long Beach from my livingroom. I can see right into the American Airlines hanger at LAX with binoc's and can easily see anything headed inbound to LAX on the profile approach as it passes SMO. That may give you an idea of my line-o-sight situation. I can hear El Toro ATIS and tower just fine up here, Beaver is good, airborne on the range and ground controllers. Can't quite hear all the way to North Island with this radio. I've heard stuff in the pattern at Miramar with other folks radio's from here.

I'm mostly a shooter (photo's) so my radios are tools of the trade: Radio Shack Pro 60 for the military stuff and an old Sony AIR-8 for the civvies (that's usually loaded with LAX freq's.). Little rubber duckie antennae (actually, I've got the AIR 8 ant. On the Pro 60 right now, it seems to work a little better). I'm not real well versed on the monitoring side of this hobby?yet.

Thanks for the Launch Alert, Dick. As it so happens, I'm already on the mailing list for that. I didn't see the Delta II launch at 11:32 today. Looked?but no joy.

Someone asked if I'd be at Mugu Airshow?.I'm sure I will. Chino's doing something that weekend too, so I may split the days. I'll be watching the weather , too. That would factor into the decision.

I think that's all the questions except Jos, who wants to know who Stagger Lee is. That was a bit of an "in" joke. Stagger is one of the runway rat gang. And one of finest aviation enthusiasts I know. He's the keeper of the tailcodes. One plonker that knows his stuff! (and he's the one introduced me to Stidge lo those many years ago?. blame him, Dan).
When I need to know something, it's Stagger or Stidge that gets the phone call. I'm told he's out there monitoring this list. Quitely, unseen, and

unheard?.hence the Stealth reference. Like a B-2?whaddya think Stidge?"Spirit of the Old Farts Village"?

This is all pretty much off-topic, but hey?you asked! I happened by Mugu today? I'll tell you about that on a separate message later.

Subject: [MilCom] Pax River West?

Lots of a/c from the test directorate today, some at Mugu with others from NASNI;

291.7>305.0>291.7>285.6 "Nightmare 61" 2xAV-8B VMA-513 to work 'Loom Lobby' A-A on 318.925
284.7 "WB 352" ? unid
322.4 "Misty 48" S-3B VS-41
289.9 "Smoke 21" 2xF-18A VMFA-134 to work any available Papa areas
291.7>307.8 "Testline 705" S-3 NARF on test flight
291.7>269.1>315.6 "Sniper 1" F-5 VMFT-401 asking Miramar tower what the reported ceiling is
291.7>274.0 "WB 912" P-3? very weak on Yuma range but did say he was part of 'Kernel Blitz'
274.0 "Cat 31" AV-8B VMA-311 working Yuma range
301.9>120.85 "WW 229" P-3 (self id) departing ops area and enter W-291, done with sortie
for today and will RTB NASNI
285.6 "Nightmare 67" 2xAV-8B VMA-513 to R-2510
266.9 "Salty Dog 403" ? unid, sweet comm, sweet lock, nothing further heard
266.9 "WB 204" ? unid, done in W-291 IFR back to Pt Mugu

From: "Clay Gibbs" <cfgibbs@...>
Subject: [MilCom] 4/15 Morning Logs

Eglin AFB

257.0- Eglin Mission clearing WISE 81 and TALON 11 into restricted areas. (Very Good conditions!!! Heard Both sides. Im nearly 275M LOS from Eglin)

266.15- Unid air/air chit chat. I show this as 1st SOW common.

405-411mhz- Numerous Eglin TRS freqs found. Very interesting comms.

Jax/Atlantic Coastal area

284.6-WINDER 51,52 direct Ormand Beach at 15K--->307.25 Jax Ct

287.4-RATTLERs air/air in W-157

297.5-FANGs air/air in W-157

357.0-ROMAN 11,12 checking in with Pinecastle Fla range. Switched to Rodman targets 321.8

273.7-ROMAN air/air. "One of your engine doors has a loose panel" uh ohh!. He later called Ops on 304.1 to explain the problem. I hope he landed without incident.

284.6-VIPER 1,2 (Unid) descending for landing at NAS Jax.

TYNDALL AFB

261.0- Backdraft GCI wkg. Tyndall 15's YUKON 1,2 (Both sides heard here!!)

351.3-BURNER 1,2 (Eglin TAWC F-15) w/ Backdraft ACMI

261.0-BANDIT 1,2 (Unid F-16's on TDY@ Tyndall) w/ Backdraft ACMI.

HF

8968/11267- CLAYBIRD with 30 char UJVCKG 140?z

11175- KING 88 with Ground Radio check to Andrews at 1400z (From 10 miles away on the ground, he was really weak here)

381.3- KING 88 reporting airborne time to Raymond 17 (A

Moody F-16's

371.2-SPIDER 1,2 1vs1 In Moody MOA 1. Air/Air 142.225

251.050- "Moody Tower, SURLEY 1 gear down glideslope intercept low approach Rwy 18L"

Moody A-10s

134.575- RINGER 1,2 wkg. MOODY 7 SOF. "MOA 1 looks terrible, how is the airspace in Live Oak MOA looking?" Air/Air 32.35

348.3- RINGER 1,2 in LiveOak MOA MARSA BADDOG 1,2 flight

Later in the day, a huge CSAR exercise took place overhead in the "Composite MOA". CRUMPET 1 Alpha and Bravo were shot down deep within enemy territory (Echols County to be exact).

3x SANDY OA-10's, 2x HH-60 JOLLYs, 4x F-16's and 1 HC-130 KING were dispatched in support of the rescue. For those who have never heard a full blown CSAR ex, its Very Intense stuff to listen and watch!

Moody does a wing exercise like this most Thursdays just after lunch. Whats cool is that the bulk of the operations ie. CAS, helo escort and pilot pickup take place on public land in full view of any curious Milcomer:) They take full advantage of the surface-->23K altitude reservations.

I have been told that each 347th Wing A-10/F-16 pilot must participate in 2 of these "downed pilot" scenarios each year.

Subject: [MilCom] army exercises

Am hearing Army exercises again on 408.05 but i have no idea where they originiate from. I live 30 miles east of Atl Georgia (30 miles from ft gillem and fort mcpherson also) but neither have a runway and these troops are talking about loading on the aircraft. I think Camp Merill (US Army Rangers) but im not sure if Camp Merril has an airfield?

Subject: [MilCom] S.E.PA logs 4/14/99

Only one really interesting log today, a lot of the normal A-10, and F-16 local traffic.

7:30AM
GOLD 81 w/ MAZDA 31 (flight of 8)139.875 refueling
MAZDA 37, and 38 were refueled first these were the spares that eventually turned back to SHAW AFB.

7:45
GOLD 81 319.4
"6 primary fighters I tow, spares 37, and 38 have turned back to Shaw AFB.
Please in form GOLD 51, and 52 it looks like our golf game will have to wait
for a while, we are pressing on to destination. Affirmative, we are taking
the 6 fighters across. cya!"
MAZDA flight was the F-16's that were due to leave yesterday.

11:00
SNAG 41 303.0
this aircraft is the C-135C based at McGuire AFB. It was flying in formation
with another aircraft of which I did not get a call sign.

ANDREWS AFB:

Snag 41 (C-135) landed at 1630

Navy WV 994 (C-130, VR-53 Andrews) landed at 1555

Flight of two VMFA-321 F/A-18s (Combat) active in BFM training the 1700 hour on sqdn freq (243.6). At 1810 w/Giantkiller (255.0) checking out of area and switching to Washington Center (285.4) for return to Andrews landing at 1830.

Navy JR 441 (C-20, VR-48 Andrews) w/Washington approach (124.2) at 1728 for landing.

Flight of four DC ANG F-16s (Caps) took off at 1720 and cleared through Washington Center (369.7 & 277.4) heading to the northeast. Checked in w/Leesburg Radio (255.4) for clearance at 500 kts at 500 ft. Switched to sqdn freq (127.275).

Flight of two DC ANG F-16s (Bully) landed at 1834.

SAM 375 at 1915 w/Washington approach (124.2) for landing at Andrews.

PACAF 01 (Cmdr Air Force Pacific) landed at 1935.

Aircraft using callsign Evergreen 1 (Evergreen is codeword for First Lady) took off at 1920 and checked in w/Washington Center (133.725) at 1934 receiving clearance for 24,000 ft heading south.

PAT 965 at 1944 w/CP (141.55) for landing. Wants quick turn around, pick up passenger and depart for Burlington, VT. Took off at 2010.

Cube 81 (unidentified), flight of two, at 1955 w/Washington approach (322.3 & 369.0) enroute to landing at Andrews at 2007.

Brave 91 (DC ANG F-16s in transit), flight of two, landed at 2010.

Flight of three DC ANG F-16s (Caps) at 2330 active on sqdn freqs (139.75 & 127.275) in ACM/intercept training using Red & Blue air scenarios at 24,000 ft w/Patuxent Advisory (270.8) in area R-4005.

Flight of two DC ANG F-16s (Noble) landed at 2350.

PATUXENT RIVER NAS:

Navy 746 (unidentified) at 0245 w/Patuxent approach (281.8 & 362.6) for landing.

Tiger 81 (unidentified) at 2015 w/Washington Center (351.8 & 281.4) requesting clearance direct to Patuxent River. W/Patuxent approach (281.8)

for PAR approach then landing.

DOVER AFB:

Reach 76 landed at 1955.

GIANTKILLER:

Eagle flight (probable F-15s, Langley) at 1626 w/Giantkiller (238.1) for entry into W386 sectors G-J.

Cave 81 flight of two (probable F-15s, Langley) at 1555 w/Giantkiller (238.1) for entry into area W386, sectors G-J.

Flight of four VA ANG F-16s (Slam) active on sqdn freqs (141.6, 141.85 & 142.175) in the 1800 hour. At 1817 check in w/Giantkiller (238.1) for entry into area for activity w/Trojan flight (probable F-15s, Langley) and Rumble flight (probable F-15s), flight of four. At 1820 switch to 373.1 " in the open" to check in w/Chalice (AWACS) and Trojan flight, telling both that Slam flight is unable to use Have Quick radios. At 1857 Chalice Echo reports to Giantkiller (238.1) that Slam flight is RTB.

Chalice Echo (AWACS) at 1831 w/Giantkiller (238.1) confirming fighters departure from area at 14,000 ft. At 1847 Rumble 61 flight w/Chalice Echo (292.3) confirming disengagement. At 1909 Chalice Echo (238.1) reports that Rumble flight splitting into two, two-ship formations departing RTB direct to Langley at 10,000 ft.

Chalice Echo at 1915 w/Giantkiller (238.1) offerring to provide radar direction, while still on station, for Flash 91 flight (F-15s, MA ANG) in Giantkiller's area. At 1921 Sentry 02 (Chalice Echo front end) w/Giantkiller getting clearance to depart area and return to Tinker AFB at 31,000 ft.

Flash 91 flight (F-15s, MA ANG) at 1930 w/Giantkiller (238.1) requesting clearance out of area W386 sector G direct to Langley. ((NOTE: Flash has been operating out of Langley since 14 April---probably TDY here from their homebase at Otis, Mass)).

MARTIN STATE AIRPORT:

Witch 94 (MD ANG C-130) practiced ILS approaches at Andrews in the 1600 hour.

Flight of two MD ANG A-10s (Raven) landed at 2015.

MISC:

Team 53 (KC-10, McGuire) at 0214 w/Washington Center (133.9) in the Patuxent River area.

Coder 44 (KC-135, IL ANG) at 1657 w/Washington Center (132.05) for clearance to Atlantic City area.

Unidentified signal on 341.75 believed to be associated w/AWACS training was active intermittently in the 1600 & 1700 hours. Possibly related to this

signal was Delta Echo Battle Staff (probably on board Chalice Echo noted later) at 1740 calling Wellington 08 (unidentified) on 228.8 (AWACS training freq).

Ascot 5973 (RAF C-130) at 1728 w/Washington Center (134.5)

Cobra flight (probable F-16s, NY ANG) at 1750 checking in w/Kiowa MOA (237.2, Indiantown GAP, PA) asking about range wx conditions. At 1758 cleared into range area for several 30 degree "pop ups" and 10 and 15 degree low drag attacks. Cobra 1 is hot w/rockets and Cobra 2 is dry.

Snake flight (NJ ANG F-16s), flight of two at 1801 in ACM/intercept training on sqdn freq (138.425)

Unidentified aircraft (callsign missed) at 1827 w/Huntress (228.7) exchanging data transmissions. At 1850 Chalice Echo w/Backburner (unidentified) (228.7) passing formatted report: Line 1-Chalice Echo; line 2- A; line 3- G; line 4- F; and line 5- N. ((NOTE: Chalice Echo may have been aircraft noted w/Huntress earlier)).

Navy 50495 (probably 150495, UP-3A) at 1839 w/Washington Center (132.05) possibly enroute to Andrews.

Yankee 52 (KC-130, VMGR-452 Stewart NY) at 2027 w/Washington Center (132.05).

383. [FedCom] FBI ASTRO Seneca/"Smart Steering"

Yahoo group: chattradio
Date: 1999-04-18 02:40:29 UTC
From: Dewey A. Bryant KD4EHC
Topic: 383 Message: 383

Date: Sat, 17 Apr 1999 14:51:33 EDT
From: RoyPB@...
Subject: [FedCom] FBI ASTRO Seneca/"Smart Steering"

A recent article in Public Safety Communications, the APCO magazine vaguely describes the FBI's coming communications upgrade.

The $4.4 million contract, awarded to Motorola and Harris Corporation begins with 500 ASTRO Seneca (A/S) mobile radios and begins the four-year process of replacing the agency's 12,000 radios.

ASTRO is Motorola's line of digital radio transcievers which are APCO-25 compliant. Seneca is Harris' communications platform which combines the ASTRO transciever with modern security, data system integration, geolocation features, imagery and biometrics.

"This system allows a user to plug in different frequency radios to provide inteoperability to a task force." "This one device can support UHF, VHF, 800MHz, tactical and other radios all of which can be controlled by a single device."

"Seneca-class systems, now being fielded, offer over-the-air digital imagery and fingerprint functions currently being introduced by the FBI through it's NCIC 2000.
Also being implemented by a unit of Harris, the FBI will offer law enforcement the ability to capture fingerprints at the 'side of the road' from suspected felons (using digital fingerprint imaging equipment interfaced to Seneca-class systems) and the opportunity to determine their identities in a minute or two." Imaging regarding photos of wanted persons and/or tattoos, scars, etc. will also be available, as will the ability for officers to take these photos in the field via digital cameras, and transmit them to bases and other mobile units.

Perhaps the most interesting feature of the A/S units is Smart Steering. Smart Steering, a Motorola trademark, provides automatic tuning to the appropriate repeater frequency and even switching to different transcievers altogether, using GPS information. This sound kind of like SmartNet, another Motorola trademark.

' 73 & Happy Monitoring!

384. I'm Back - Finally!!!

Yahoo group: chattradio
Date: 1999-04-20 14:24:22 UTC
From: Larry Van Horn
Topic: 384 Message: 384

After a hard drive swap out here at work that wiped out all my email list etc, I finally found KF4LHP's website again and, of course, this group. Nice to see it still around.

I've been doing a lot of scanning lately trying to map out this area throughout the spectrum and have found some real interesting catches over in the TN area (especially Polk Co).

Here is some of the latest:

159.585/151.100 TN Dept of Transportation/Highway Department Benton (Polk Co) work crews repeater. In addition to the normal district 2/4 dispatch 159.180 repeater, I found this little ditty this morning tucked away on a motor carrier (LJ) allocation. At least the input is on a highway dept allocation. It appears this is being used by road crews working on guard rails and with the grass cutters, etc.

Also heard last night what appears to be the GBI in North GA running an operation on Marine channel 6 (156.300) simplex (that is not a misprint). I'm starting to find all sorts of interesting little freqs hidden away like this up here in the mountains (not a lot of water around here for the boats other than Lake Chatuge).

More as I put it together. I also keep a copy of my western NC scanner list on the Grove website. Go to URL: http://www.grove-ent.com and click on the Monitoring Times link. Then go to the MT freq exchange and you will see it there. More soon.

Good hunting and 73,

Just thought I would pass these two along and ask if anyone else has monitored them or knows anything about them...
163.7975 (approximately) Constant tone, maybe about 3000 Hz 24 hours a day - has been a strong signal at my Soddy Daisy location for years.
Lots of noise between 148.745 and 149.215 with peak signal strength at approximately 148.915 - it sounds similar to a TV video signal but doesn't have the same shape on a spectrum analyzer.

Also, thanks Dewey for the new talkgroup number!

16816 is Charlie Dispatch for when city gets too big for the 2 dispatchers; right now it is used like a car-car channel; it has been active since Chatt PD got online- FYI for those new to the TRS. Dewey, did you hear actual SWAT or the cars on the perimeter on 16816?

Sometimes advertisers get it all wrong. Here are some funny examples of advertising campaigns that ended up being entirely inappropriate!

1. Coors put its slogan, "Turn it loose," into Spanish, where it was read as "Suffer from diarrhea".

2. Clairol introduced the "Mist Stick", a curling iron, into German only to find out that "mist" is slang for manure. Not too many people had a use for the "manure stick".

3. An American T-shirt maker in Miami printed shirts for the Spanish market which promoted the Pope's visit. Instead of "I saw the Pope" (el Papa), the shirts read "I saw the potato" (la papa).

4. Pepsi's "Come alive with the Pepsi Generation" translated into "Pepsi brings your ancestors back from the grave", in Chinese.

5. When Gerber started selling baby food in Africa, they used the same packaging as in the US, with the beautiful Caucasian baby on the label. Later they learned that in Africa, companies routinely put pictures on the label of what's inside, since most people can't read.

6. Frank Perdue's chicken slogan, "it takes a strong man to make a tender chicken" was translated into Spanish as "it takes an aroused man to make a chicken affectionate".

7. The Coca-Cola name in China was first read as "Ke-kou-ke-la", meaning "Bite the wax tadpole" or "female horse stuffed with wax", depending on the dialect. Coke then researched 40,000 characters to find a phonetic equivalent "ko-kou-ko-le", translating into "happiness in the mouth".

8. When Parker Pen marketed a ball-point pen in Mexico, its ads were supposed to have read, "it won't leak in your pocket and embarrass you". Instead, the company thought that the word "embarazar" (to impregnate) meant to embarrass, so the ad read: "It won't leak in your pocket and make you pregnant". OOPS!

405. Mag-Lite pipe bomb

Yahoo group: chattradio
Date: 1999-05-09 01:57:33 UTC
From: Dewey A. Bryant KD4EHC
Topic: 405 Message: 405

DATE: 4-23-99
NUMBER: 99015
FROM: NDI, Criminal Intelligence Unit 687-3346,
SUBJ: NEW TERRORISM DEVICE

The Maryland Firefighter list has information that it received from the Baltimore ATF office regarding pipe bomb devices. There has been a recent rash of pipe bombs used against law enforcement- and EMS/ FIRE/ RESCUE personnel. What makes these pipebombs unique is that, instead of using a pipe, they use Mag Lite flashlights.

The Mag-Lite is usually left ON and an unsuspecting police or fire official notices this, picks it up, and the device detonates when turned OFF. Some Mag Lites have been found with motion sensors; when they get moved they detonate. The ATF office is suggesting that any Mag Lite found in the ON position should be left alone. If you come upon such a Mag Lite, notify your Incident Commander and call the bomb squad for detonation.

If you have any questions or information please contact the Nevada-Division of Investigation's Criminal Intelligence Unit at (775) 687-3346.

407. [Fwd: ARLB031 ARRL to Celebrate 85th Anniversary on the air]

Yahoo group: chattradio
Date: 1999-05-11 20:40:27 UTC
From: Dewey A. Bryant KD4EHC
Topic: 407 Message: 407

-------- Original Message --------
Subject: ARLB031 ARRL to Celebrate 85th Anniversary on the air
Date: Tue, 11 May 1999 15:16:30 EDT
From: "ARRL Members Only Web site" <memberlist@...>
Organization: American Radio Relay League
CC: recipient list not shown: ;

SB QST @ ARL $ARLB031
ARLB031 ARRL to Celebrate 85th Anniversary on the air

ZCZC AG31
QST de W1AW
ARRL Bulletin 31 ARLB031
>From ARRL Headquarters
Newington CT May 11, 1999
To all radio amateurs

SB QST ARL ARLB031
ARLB031 ARRL to Celebrate 85th Anniversary on the air

The ARRL celebrates its 85th anniversary May 18, 1999. To mark the event, Maxim Memorial Station W1AW will operate as special event station W1AW/85 during the week of May 17-23. Some W1AW/85 operation will include PSK31. The American Radio Relay League was founded in 1914 by Hiram Percy Maxim, later 1AW, and Clarence Tuska, later 1AY.

It was Maxim's desire to send an inquiry about a hard-to-get receiving tube--A DeForest Audion--from Hartford, Connecticut, to Springfield, Massachusetts, that served as the catalyst for the League's birth in 1914. After conditions prevented him from working Springfield directly, he arranged with a station between the two cities to relay his message.

Initially working with Tuska through the Radio Club of Hartford--which had voted to take over development of a national ''relay'' organization--Maxim's vision for the League became reality in May of that year. Initial dues were free. By late summer, more than 200 ''relay stations'' had been appointed across the US, although the first edition of QST--16 pages in all--did not appear until December 1915.

''Our celebration of the League's 85th anniversary would please our founders in two ways,'' said ARRL Executive Vice President David Sumner, K1ZZ. ''First, we are celebrating with on-the-air activity--the organization, promotion, and protection of which was why they went to the trouble of creating the League in the first

place. Second, just as they did in the exciting early years, we are looking forward by emphasizing new methods of radio communication.''

ARRL President Rod Stafford, W6ROD, encouraged participation from all segments of the Amateur Radio community. ''We hope everyone, member and nonmember alike, will join in celebrating the League's first 85 years and the beginning of the next 85,'' he said.

Volunteer staff members will handle on-the-air duties at W1AW/85, which will take place before and after regular daily W1AW transmissions. Plans call for W1AW/85 to operate 160-10 meters plus 6 and 2 meters and 70 cm, 25 kHz inside subbands on CW, plus SSB, RTTY, PSK31, SSTV, satellite, Novice bands, etc. Additionally, W1AW/85 will transmit bulletins using PSK31 as a secondary digital mode (time permitting) for the last digital bulletin of each day that week.

A special QSL will be available.

408. We have a new PLMS splinter pair in the Tri-State!

Yahoo group: chattradio
Date: 1999-05-12 12:46:38 UTC
From: Larry Van Horn
Topic: 408 Message: 408

Now this part of the country would have been the last place I thought one of the new private land mobile service splinters to show up, but ......!

Late yesterday afternoon I confirmed a new splinter pair for the Gilmer County, Georgia Fire and Rescue-Ellijay (PW) KUB754 158.8125/153.9125 (COR) [Talona Mtn repeater]. This, of course, has come out of the Public Safety Frequency Pool. I'm not sure on the status of their old 45.400 MHz VHF-lo band system at this point.

From the old PS bandplan, the Clay County, NC (Hayesville) Fire and Rescue, Inc appears to have added to their 154.310 repeater system. Eagle View Mtn was the original location with 153.830 as an input. We now have two additional repeaters to provide fringe coverage. Brasstown Bald (the highest mountain in Georgia) will have one of the sites and Wispering Mountain (near Franklin, NC) will be the other new repeater. A new mobile/fixed input of 159.060 MHz is now authorized. I hope to have more as the monitoring continues (or a phone call gets made). ;-)

With the new added repeater coverage, people with a decent monitoring post in Atlanta will have a shot at listening to our local fire/rescue. Heck they might even hear old fireman Bob Grove every once in awhile (Unit 206).

Starting in the July issue of MT we will be profiling these new private land mobile frequency allocations in MT's new scanner service search column. We will start with the new Police State allocations in July. Monitoring Times is the only hobby magazine that will give you all the new PLMS bandplans and updates on the refarming of the radio spectrum in the months to come. We hope you enjoy all our new scanner coverage

First the trunk tracker and now double the amount of frequencies in the scanner spectrum to find and analyze. It just keeps getting better and better for scanning all the time. ;-)

These new splinter pairs are showing up in Dade County Georgia as well.
Their new fire dept repeater out is 156.1875. The input is the old simplex
channel 153.950. The output is right next to Tenn Dept Transportation
channel 156.180...hard to listen to both when they're active! I'm sure
narrower scanners will be out one day!

410. GA Department of Corrections

Yahoo group: chattradio
Date: 1999-05-12 17:29:21 UTC
From: Larry Van Horn
Topic: 410 Message: 410

Now this is a real interesting intercept. Right before lunch (EDT) caught some units simplex on 156.000 discussing their lunch plans in regards to various local restaurants. Several mentions were made of their K-9 companions. We have had several folks pass along 156.100 MHz simplex as a possible K-9 handlers frequency for the guards at the Georgia Department of Corrections. Based on the traffic monitored here we could have another unlicensed frequency usage by the Georgia Dept of Corrections K-9 handlers. Mark this tentative.

Also the a couple of nights ago, we heard definite LE tactical surveillance traffic on 156.3 MHz. Based on the locations passed, this was also a Georgia LE agency. These days you just don't know what is going to pop up in the spectrum.

We might live in the country, but you sure can't tell it by the radio traffic. ;-)

My complete list for the Tri-State area is posted in the frequency exchange section on the Monitoring Times homepage in case someone wants or needs it.

411. Georgia DNR

Yahoo group: chattradio
Date: 1999-05-13 13:35:39 UTC
From: Larry Van Horn
Topic: 411 Message: 411

Doing my morning sweep of unid/no hit freqs I added a new one:

Chattooga County Fire/EMS - Summerville, GA
WNPJ311 159.690/150.775 (162.2 Hz)

Like most NW Georgia, East Tennessee public safety agencies the dispatcher is identified as "Central."

Now for the subject at hand. Found a possible new Georgia Department of Natural Resources freq in use this morning on 159.930. While looking at the FCC file I noticed the term DOAS and wondered what that was.

So I called the phone number associated with the license (got the freq coordination office) and asked the gent that answered what that stood for (Department of Administrative Support). He graciously answered.

When I mentioned the freq he got paranoid and wouldn't tell me the agency ("it belongs to one of our state agencies"). Sooooo..... I started digging and found out that the state of Georgia is licensed statewide on this one by the DNR (Department of Natural Resources).

I assume that the old VHF-lo band system for the state parks and game wardens has been replaced now by a new high band system. So here is my preliminary notes on the repeater outputs with more to follow (wish I had his email address I would send him a copy). ;-)

There appears to be four Georgia DNR repeater output freqs used statewide so far. The outputs are:

151.460, 151.475, 159.930 and 160.125.

If anyone has any additional details, please drop me a line. I would like to get info on the complete system.

Have fun and good hunting.

Subject: [chattradio] Georgia DNR

From: "Larry Van Horn" <larry@...>

Doing my morning sweep of unid/no hit freqs I added a new one:

Chattooga County Fire/EMS - Summerville, GA
WNPJ311 159.690/150.775 (162.2 Hz)

Like most NW Georgia, East Tennessee public safety agencies the dispatcher is identified as "Central."

Now for the subject at hand. Found a possible new Georgia Department of Natural Resources freq in use this morning on 159.930. While looking at the FCC file I noticed the term DOAS and wondered what that was.

So I called the phone number associated with the license (got the freq coordination office) and asked the gent that answered what that stood for (Department of Administrative Support). He graciously answered.

When I mentioned the freq he got paranoid and wouldn't tell me the agency ("it belongs to one of our state agencies"). Sooooo..... I started digging and found out that the state of Georgia is licensed statewide on this one by the DNR (Department of Natural Resources).

I assume that the old VHF-lo band system for the state parks and game wardens has been replaced now by a new high band system. So here is my preliminary notes on the repeater outputs with more to follow (wish I had his email address I would send him a copy). ;-)

There appears to be four Georgia DNR repeater output freqs used statewide so far. The outputs are:

151.460, 151.475, 159.930 and 160.125.

If anyone has any additional details, please drop me a line. I would like to get info on the complete system.

Have fun and good hunting.

414. East Ridge Fire

Yahoo group: chattradio
Date: 1999-05-14 01:37:53 UTC
From: Matthew Sadler, KF4LHP
Topic: 414 Message: 414

Hi all,

Was listening to East Ridge Fire Rescue this evening on 154.310 and two units were attempting to contact each other on that frequency but were out of range, so they went to the city 800 system.

Talkgroup 19216 was used... so, all who listen may want to make a note of it.

A lot of these 159 and 160mhx channels are actually used by GBI sometimes.
Check out the common callsigns! Soem match know GBI freqs. 151.205 is a GBI
repeater, and I've heard the input on one of those 160mhz channels.
Yep, DNR is on vhf hi now. In Northwest Georgia, two mosntrous repeaters
are 151.475, and 151.460.

From: John Pless
Topic: 414 Message: 417

Talkgroup 19216 has been quite active with fire dept chit chat. They still use 154.31 for main operations... Although I'm wondering why their getting 800 equip, if they're planning to upgrade simplex vhf system w/repeater. Could it be, that rather than upgrading vhf...they're going 800? They can keep vhf radios in truck for those times they go out of city for mutual aid. It seems to make more sense than upgrading a vhf system.
Anybody have the real skiny on this?

Only thing I can think of is that command-level personnel may be the
only ones with 800, but everyone has VHF. I doubt you'll see them go
away from VHF for the simple reason that they too have volunteer
personnel and there's really no cost-effective way to do alerting on
800, especially when the system that's in place currently on VHF does
the job fine.

La Fayette Fire Department was, at one time, considering going to a 900Mhz system. (This was before the completition of the Walker 911 building several years ago.) They were considering installing a 900MHz conventional system, and moving their paging frequency, which is shared by City Utilities, to one of these new frequencies. The plan was never followed through with because Walker EMA had already ordered the dispatch consoles for 911 which were VHF. About a year or so later the City of La Fayette was considering going to a trunked system so that every different department in the city could have at least 1 talkgroup of its own. The city was going to have to purchase a trunked dispatch console for 911 as well as new radio equipment for all its units. This presented big costs which caused La Fayette to hold off on the plan, but I was told by a firefighter that one of the biggest costs would be buying all of the volunteer firefighters paging equipment that would be compatible with a trunked system.

The question I have is couldn't these agencies leave their paging on VHF and move their communications to 800 Trunked? Or couldn't they just let paging be on a 800 MHz conventional frequency?

They could move comms to 800 and leave paging on VHF, but why? East Ridge does a lot of mutual aid with Catoosa, so why try to keep up with two different radios? As far as putting paging on 800, there aren't any pagers like the Minitor or the Minitor II available for 800 MHz, those are/were VHF-LO, VHF-HI, and UHF versions only.

you are correct, The admins have the new 800 meg system but because the majority of units working for the smaller fire depts are volunteers; therefore, cannot afford nor do they have privledge.

At the present all 800 meg radio are programed by the city radio shop inorder to maintain control of the system. Due to the expense, time, and need for internal control admin presonnel will be the only one on the 800 systems for awhile.

Keep up the good work sending radio inteligence reports.

The solution is actually quite simple... done in MANY locations where trunking is used. A talkgroup is assigned for dispatch, and that is simulcast on vhf system...all voice traffic and tones. So you hear traffic on 800 and vhf. The pager gets toned, the portable/mobile two way handles all comms. The benifit, is the volunteers can monitor all traffic on thier pager. Even Fulton County GA and Cobb County Ga fire depts. do this. Check out 154.325 Fulton, and 154.430 Cobb. When conditions are good you can hear them. This patching provides paging at minimal cost. Of course Motorola and nay-sayers will say a separate 800mhx conventioanl paging system is needed...

From: Chris Palmgren
Topic: 421 Message: 426

Yes, you can at times depending on conditions hear the following Chattanooga radio stations in Knox County. A good yagi antenna from Radio Shack about 25 feet above the ground pointed towards us should be used for best performance.

The 100,000 watt FM Class C stations for Chattanooga are:

WMBW 88.9 Religious
WDYN 89.7 Religious
WSMC 90.5 Classical
WDEF 92.3 Adult Contemporary Sunny 92.3
WDOD 96.5 Adult Alternative 96-5 The Mountain
WUSY 100.7 Country US 101
WSKZ 106.5 Classic Rock KZ 106

In addition, WLLJ (J 103) 103.1 with 50,000 watts is located near Athens, TN, with coverage into both Chattanooga and Knoxville. GT 108 (Oldies 107.9) is a Class C1 (because of height above avg. terrain) but only transmitting around 3,000 watts in a directional pattern. WUTC (Music/NPR 88.1) transmits at 30,000 watts with a Class C ranking. Finally, there is the CHR/Top 40 WKXJ 97.3 (97 Kicks) with around 16,000 watts from atop Sand Mtn. near Jasper, TN. The signal has a hard time reaching Chattanooga because of the mountainous terrain so the station uses two 250 watt translators at 99.3 Lookout Mountain and 103.5 Signal Mountain to fill in the metro Chattanooga area. A new station to hit the market will be the CHR/Top 40 Alive 95 (95.3) in Cleveland, TN. A tower is being constructed on White Oak Mtn. near Ooltewah. I don't know how much power they will be allowed by the FCC, but it should have decent coverage across some of the four state (SE TN / NW GA / NE AL / SW NC) area once the new antenna site is utilized. I'm looking forward for them to hit the market...competition is good!

BTW, I read Walker Johnson's column in the Knoxville News Sentinel about WNFZ 94.3 beating WIVK in the men 18-34 demo. Wow! Interesting for a class A to top a legendary giant like WIVK. Lets see what happens in the new Eagle 100 vs. 103-IMZ rock war now taking place. Plus, not to mention the Star 93 vs. the new Mix 95 CHR/Hot AC war.

Isn't broadcasting fun! :^)

Subject: Dear Friends

Dear Friends,

We are writing You this letter because media blockade that western governments applied on our country will prevent You from knowing about the terrible massacre that yesterday took place on Kosovo and Metohija. NATO found new way in "preventing" the humanitarian catastrophe caused by their bombs, on 14.05.1999 NATO airplanes for the second time bombed the Albanian refugee convoy which was moving from the Macedonian border back to inner Kosovo. People who were going back to their homes were brutally bombed with cluster bombs. More than 100 people were killed in this incident, bodies burned beyond recognition were scattered around village of Korisa where this crime took place. Eyewitnesses said to television that they were just beginning to sort their life to normal and were happy to return to their houses when hell from sky fall upon their heads.

In relation with this tragic story we would like to inform You about a rather disturbing e-mail from Croatia. A women from Croatia eye-witnessed that for the last few days NATO pilots are practicing on Croatia's "Galeb" and "Jastreb" airplanes. These are the jets that stayed in military arsenal of Croatia after braking of former Yugoslavia. Federal Republic of Yugoslavia has jets of same type in their arsenal. The aim of this operation is bombing of refugee camps in Albania and Macedonia. NATO's idea is to paint the planes in FRY Air Force colors and insignia, bomb the refugee camps and blame the Serbian side for that. The purpose of this plan is to get a REALLY good reason for the ground troops operation and to get public opinion in favor of such operation. Several facts confirm this information:

1. For days NATO has intensified the relocation of refugees from the border regions of Albania and Macedonia further inland.

2. The arrival of NATO airplanes into Albania and Skopje is not covered by TV reports as before (business associate in Macedonia confirmed that the number of transport aeroplanes arriving to Skopje has significantly increased).

3. Christian Amanpour has arrived to Albania.

Besides Croatia Air Force there are few sources from which these types of planes could be available. It is well known that several collectors from USA bought these planes from the Air Force Museum in Belgrade. Some of the African countries had these planes in their arsenal because they were very reliable and relatively cheap types of plane.

This kind of scenario was already seen in Bosnia. In august 1995 somebody shelled biggest market place in Sarajevo called Markale. There were more than 70 Muslim civilians dead. CNN led by Christian Amanpour and other western media immediately accused Serbian side for this massacre. Not for a long time after this NATO bombed Bosnian Serbs. A year after that when the war in Bosnia was over Muslim government in Sarajevo admitted that they were responsible for this crime and that they did it in alliance with western media. They killed their own people in order to give NATO justification for action against Bosnian Serbs.

We would like to apologize You for any inconvenience this e-mail might caused You, but media blockade of our country led us to this desperate step in order to help our people and our country who were satanized by that same media. Please visit web-site <http://www.aic.org.yu/> www.aic.org.yu for recent news and photos from Yugoslavia and our site <http://www.barw.org.yu/> www.barw.org.yu for history and other scientific topics related to Kosovo and Metohija. Also please send Your comments and questions to <mailto:desk@...> desk@....

Sincerely Yours,

Belgrade Academic Association for Equal Rights in the World

Perry:

In the early 70's as a young ham, I spent many of hours
listening to the shortwave to a station called, "Radio Moscow"
and "The Voice of America".

From your viewpoint, I guess each were political PR and
should be taken with a grain of salt.

But this is email list made up of a lot of hams who listen
on all modes, both Local and shortwave radio and now the internet.

Who, if they are like me, don't care what the political view is
but do like to 'listen' where the action from time to time.
(See the URLs at the bottom of that message)

I can remember my first voice contact with another ham in the
then USSR. A teenager from Chickamauga, GA swapping comments
with a man behind the "Iron Curtain". Cool in its day I guess.

I too, listened to Radio Moscow, Radio Peking, Radio Hanoi, and VOA among others.
I always found the BBC to be the least biased. However, a medium that thrives on the on "Good Times" virus, "Craig Shergold" send a card, and Microsoft "forward this message and make money" hoaxes is less trusted than RF.
Remember, it's the MIS-information highway.

Yep there was a SWAT incident...ended peacefully. THey used 16880, and SWAT
2 which is a simplex freq...not sure what it is now.
As to 19120, yes they do use, rarely. It's ADMIN, and only top brass in
PD/FD have it along w/ city manager.
19152 is another one to keep in, CID.
19088 is Car To car.
Units still have "Old radios" in cars...I would imagine they'll go in the
near future just the way Red Bank did.

I got all of that message...it may be onelist that doesn't like what it
thinks
is an attachment...anyway...on to the topic at hand...

I saw on the news that there was a peaceful resolution to the SWAT call
on
Mowbray Mtn (I think thats where they said) same call? I suppose dude
made the
decision that he just couldn't take on Chattanooga's Elite and win...I
guess
that shows some intelligence :)

That's the admin talkgroup if I remember a couple of previous
posts...probably
won't be a whole lot of traffic on it...

Then why not just call it "Detectives" channel! Sound of slap on forehead!!!
I was monitoring the crash at airport: according to my info 18288 is supposed to be Crash/rescue, but it was never active/activated; all the crash/rescue I heard was on 16976 and on EMS Main and Ch. 2. By the way, I also never hear 18256 Airport Maintenance. Are these tgs correct? The only one that is current out of the three airport tgs is 18192 Airport police. Since I work directly near glide path of runway at Eastgate Center, I need the most current.
All of the pilot's traffic was on 118.3 Mhz and there was some traffic pertaining to him on 120.950 Mhz. It was definitely fun trying to juggle trunked and conventional modes on one scanner and watching his position all at the same time, just about fried my brain circuits! LOL! Sure glad there were no injuries. What surprised me was that there was no fuel leaks after he landed. Sounds like he is an expert pilot. Thanks in advance! Dave

Other than offering you a tylenol... :)

The State of TN (THP, TBI, etc) usually refers to C.I.D. instead of
"detective division"...thats probably one reason...

>I was monitoring the crash at airport: according to my info 18288 is
>supposed to be Crash/rescue, but it was never active/activated; all the

I think they use the police channel the most...even for fire type
calls...the airport officers are "public safety" and work both fire and
police in their 24hr shift rotations...so that way everyone can keep
up with what everyone else is doing...

>Since I work directly near glide path of runway at Eastgate Center, I
>need the most current.

Ahhh...don't we all need the most current of all the local freqs
and talkgroups? :)

443. Re: SWAT

Yahoo group: chattradio
Date: 1999-05-22 13:02:32 UTC
From: John Pless
Topic: 327 Message: 443

There was a lot of activity on 18192. I heard crash units give updates.
Yep, I've never heard any traffic on 18288 either. But I have heard 18256.
It wasn't maintenance though. It was police. Unit on 18192 told another
unit to "Code 11." They popped up on 18256. I can only assume for now it's
airport pd/fd car to car.
But since monitoring activity at out "metropolitan" airport is about as
dead as listening to Mayberry RFD... I just keep 18192 in memory.
I was monitoring the Erlanger Trunked system the other day. While
LifeForce was landing with a hot offload, a ground team used talkgroup
300-5. 300-1 is their main security channel. I was just playing with it,
because the Erlanger system is rather mundane to monitor as well. Until the
new trunktrackers come out that monitor multiple systems, I won't care much
for listening to the hospital.
Nextel is bringing it's new motorola IDEN technolgy to town. Sites are
going up everywhere. It's digital, and offers digital two way trunked and
cellular in one unit. Their licensed for 285 frequencies between 851 and
866 mhz. But they are doing here what they've done in other markets. They
are forcing their current customer base on analog 800 trunking to get off.
I've read this on several sites. What they do, is scale back the number of
repeater channels. Customers complain they get busy signals, then Nextel
tells them their phasing their system out, and they have to buy didital.
Check out the current Nextel trunking system. It used to utilize 20
frequencies. All activity is now crammed into 5 channels, with load
spilling over to two other freqs sometimes. I do think some of their former
clients have switched to the other 23 channel anlog system in town.
The newest system has also gotten more active. It's a ten channel system,
861-865.1125 and 861-865.3625.
I wonder how many folks will go with Nextel's system. They are billed as
Chattanooga's sixth wireless phone service provider. For more info on IDEN,
check out Nextel and Motorola's site. By the way, Motorola owns 23% of
Nextel, so they have a huge stake in seeing this technology get off the
ground.
The site going on top of the Grandview Building should begin sweeps to
test signals next week. It's a digital TDMA set up, not sure what we'll
hear yet.
Happy Monitoring!
John Pless

The last time I noticed them they were 857/858/859.7625mhz for phone patches.
By the way. I got an e-mail about the upcoming Trunktracker 2....here it
is. I chose not to show the senders name... "but it's official."
Happy monitoring

Thanks John for info, I remembered you posted this a while back but I've slept since then. I also remember you said something about SWAT 2 being around 856-859.9625 Mhz before the city started putting data in that area of freqs, am I correct? I'm assuming that if I'm correct and their radios haven't been reprogrammed that they have been using 859.9625 Mhz. I'm also assuming that they would use a PL tone as to keep their radio squelch from being triggered by cell phone image freqs. I know that even with triple IF, my scanner can still stop on cell images if I'm real close to a cell tower. But I may be incorrect in my assumptions. I wonder for what purpose 856.7625 Mhz would be left out of rotation. There is no traffic whatsoever on it.
Great info on scanners, but I still want one that has the military and 220 Mhz Ham bands included all in a hand-held. I can't carry a $1000 base unit around with me like I do my hand-held. Oh Well! I guess I'll keep on dreaming! Dave

This gentleman will have interviews from Hurricane watchers from around
the country, as well as some live spots and his take on the upcoming
hurricane season, as a side note one the interviews will by myself
and my take on the season, the Recovery here in South Mississippi
from Georges

He will also feature Dr Gray's forecast and point out some great Website
in which to track those beastly storms
==========

Solar Storm Peak Seen In 2000

CHICAGO (Reuters) - The year 2000 could see electrical power outages,
satellites veering off-course and cellular phone and pager disruptions as
the number of sunspots and flares, solar storms and other ``space weather''
hits its cyclical maximum, scientists said Monday.

``We call this the other Y2K problem,'' said JoAnn Joselyn, leader of the
National Oceanic and Atmospheric Administration Space Environment Center,
during the 194th meeting of the American Astronomical Society. ``We don't
quite know how bad the effects are going to be. We do know the ionosphere
is going to be disturbed.''
Geomagnetic storms on earth and other results of the increased solar
activity are expected to reach their 11-year peak between January and April
2000, said Richard Altrock of the Air Force Research Laboratory in Sunspot,
New Mexico.

Altrock devised a new method of watching and timing sun surface activity
and applied it to the last three solar cycles to pinpoint the roughly
four-month window during which he expects solar activity to reach its
maximum next year.

He also predicted the number of sunspots in the coming maxima, dubbed Cycle
23, will reach approximately 160, roughly the same number as seen during
the most-recent two peaks in 1989 and 1979.
The cyclical increase in solar activity occurs as the sun's magnetic field
reverses every 10 or 11 years.

The accompanying release of highly charged particles and radiation toward earth on solar winds at speeds of up to 1 million mph or 440 kms per second can disrupt radio communications, form sky displays known as northern lights and create enough drag to cause satellites to lose altitude, explained Joselyn.

The magnetic fields in the sky also create currents on the ground, usually small and subtle but which can be magnified via long high-voltage power lines.

This can burn out power companies' electrical transformers and cause power outages such as occurred in 1989 in parts of the East Coast and across Canada's Quebec province, she said.

Related events such as solar flares occur more frequently before the solar maximum, but major flares can continue for two or three years afterward.

Each solar flare releases energy equivalent to 1 million, hundred-megaton nuclear explosions and accelerate particles through space that are hazardous to satellites and astronauts and can disturb radio transmissions. Richard Canfield, a physicist at Montana State University in Bozeman, said his researchers by early 2001 will operate two powerful new instruments -- a spectroscopic imager and a suite of solar telescopes -- designed to study solar flares.

In the meantime, Joselyn said her group in Boulder, Colo., will continue operating round-the-clock, using a satellite to monitor the solar winds, and can give companies and the public 30- to 60-minute advance warnings of increased solar activity incidents to help them prepare.
``So we can tell what's coming,'' she said.

Yep,
every user of the trunked system has disaster one two and three programmed.
Sometimes, even city vice will use one of these for surveillance.

455. 800mhz

Yahoo group: chattradio
Date: 1999-06-09 21:01:30 UTC
From: John Pless
Topic: 455 Message: 455

It was announced at the Hamilton County 911 board meeting today that ground was broken last week on the White Oak Mnt. site. And if all goes as expected, the third 800 mhz site should be operational by end of August. The selection of an exact site for the fourth tower is ongoing.
It was homorous to note as the announcement was made, Sheriff John Cupp slid his chair back three feet, looked toward the ceiling, slapped his forehead with both hands and exclaimed "yes!" He's been anxiously awaiting to kick the dilapidated 400mhz system off the mountian.
Cheers,
John Pless KG4BOD

From: John Pless
Topic: 457 Message: 457

Two notes:

First, East Ridge is on the air with their new fire repeater (or at least testing) on 154.310.

Second, Riverbend stuff:
last year Chatt pd/fd used disaster 1 (18704) and disaster 2 (18736) talkgroups. I'd expect the same this year, maybe even city net 1 & 2.(16784 & 16688) Since sheriff dept is still 460mhz, they'll use 460.400 mutual aid, possibly linked into 800 system.
Also try marine channels, expecially 156.800. Many boats chat amongst themselves. Chatt-Ham Co Rescue on 155.295, or on their tac 2 156.240
CARTA also sets up special talkgroup for shuttles etc. Hamco ems used their vhf channel 2 155.220...but I wouldn't be suprised to see them use 800 groups like 18640 or 18608
But who knows...there may be new riverbend talkgroups?

Did they replace radio equipment (E.R.)?
Might want to monitor 17552 also for RiverBend. It has been used in the
past for Special Events.
CARTA has used 18320 in the past. I believe it's their Unit-Unit.
John, is 18608 assigned to Emergency Management Agency or is it assigned to
Hamilton County EMS? I have it listed as E.M.A.

459. 443.950 repeater

Yahoo group: chattradio
Date: 1999-06-10 22:55:10 UTC
From: Matthew Sadler
Topic: 459 Message: 459

Anyone know who owns the 443.950 repeater? Heard it on the air the other night but I don't know CW...

david,
18608 is actually called ops or operations for ems. right now thought ema management also uses.

467. SWAT2 Frequency

Yahoo group: chattradio
Date: 1999-06-17 08:56:35 UTC
From: David
Topic: 467 Message: 467

Found the SWAT 2 frequency. Last night's SWAT call in Catoosa CO. was near where I worked at so I got up close. Frequency is 859.9625 Mhz and it is very low power; I was about a block away and i was not getting every transmission. The call ended around 0050 hrs when they teargassed him out. The dude was certifiable, he was worried about his car windows not being rolled up earlier last evening.

This one belongs to WJ9J. It is located in the same place as 444.450. It is a test repeater and you are welcome to use it while it is up. He wants to know how it's doing.

472. new tower

Yahoo group: chattradio
Date: 1999-06-19 13:41:19 UTC
From: John Pless
Topic: 472 Message: 472

The new Hamilton County 800 site on White Oak is moving along FAST. A company from Atlanta is builing it. They have installed concrete footings 25 feet into mountian. Once foundation done, it will take 3 days to stack the 190 foot tower. I'm told it should be up within couple weeks. It will be solid steel (not tubular).
Motorola and radio shop will begin rf testing by August. It's neat watching a tower go up. If you get a chance to go up and see for yourself: go up Firetower Road to top of Mnt, and go on just past the little green house on left(used to be old fire tower there). The new Signal One tower is on your left, the western brow. Look to the right, toward the Eastern side of the brow.

473. VHF low band activity

Yahoo group: chattradio
Date: 1999-06-22 00:17:22 UTC
From: Jim Knight
Topic: 473 Message: 473

Today was a good day for low band VHF monitoring. The most interesting catch was a military training exercise on 40.65 MHz that went on for an hour or so after I first found it. Many instructions were given on how many rounds to load, checks on whether units were ready to fire, etc. Among the call signs used were India 99 and India 28. Never heard anything to give away the location - it was strictly business on the air.
Also heard faint Spanish, possibly paging, on 38.98 (an old TVA freq no longer used by TVA), and various other DX.

474. Re: VHF low band activity

Yahoo group: chattradio
Date: 1999-06-22 14:23:23 UTC
From: John Pless
Topic: 473 Message: 474

I remember hearing California and other western states highway patrols not too long ago in the 42 mhz range. 30-32 mhz was peppered w/ spanish speaking stations. Also, many New England area fire depts were still using 33mhz and 46 mhz frequencies..skip was good on that too.
I'll have to revisit the spectrum and check it out, cause 6 meter ham band has been wide open lately!

475. 171.95

Yahoo group: chattradio
Date: 1999-06-27 23:17:51 UTC
From: Jim Knight
Topic: 475 Message: 475

I heard a surveillance in progress on 171.95 Friday evening. Several cars were involved following someone south on Hixson Pike from the Access Road area. They must have been operating simplex since the signal got weaker as they headed south. This is the first time I have heard anything on this particular freq - those who can please add it to your scan list and let the group know if you hear anything else.

From: David
Topic: 200 Message: 486

This is for anyone who wants to know:
I got to get a good look at a Chatt PD officer's radio:
Motorola MTS-2000; They have a total of 12 channels programmed
Ch # 7-12:
Clear DES Ch#

City Net One: 16784 ? 7 Patrol/ 8 Dets

City Net Two: 16688 ? 8

Disaster One: 18704 18712 9

Disaster Two: 18736 18744 10

Disaster Three: 18768 18776 11

"Backup 1" ? ? 12 (This one was in a regular patrol radio; unknown what it is; couldn't get him to key up on it and he didn't know what it was either????)

Also for E.R. PD the channel listing so far is: 19088 is Ch#3; 19152 is #2

Hope this helps anyone keeping a file on the TRS. Dave

488. new tower

Yahoo group: chattradio
Date: 1999-07-17 21:11:12 UTC
From: John Pless
Topic: 472 Message: 488

The tower is now up at the Hamilton County White Oak Mnt. site. It's an odd looking 180 foot job, big lighting/static arrestor at top, and three horizontal booms just below that. Looks like a cellphone tower. But so far no antennas up, and no 6/10 gig dishes linking other sites yet. A slab has been poured next to it for the concrete building that will house the equipment. It was interesting to see all the grounding systems going in. That building isn't there yet. Last word was site should be up and running in August.
Might want to monitor Radio Shop on talkgroup 17840. Motorola techs in past used 17872. RF testing etc should begin in August...might even want to monitor one of the 20 frequencies not in trunking sequence, because sometimes a continuous carrier is transmitted for testing.
Work on fourth site in Sale Creek is supposed to begin in fall.
Have heard HCEMS set a tentative date to go 800 December 1, but unconfirmed.

From: Sadler, Matthew
Topic: 489 Message: 489

Hi all,

I was driving along US 27 in downtown Chattanooga the other day and noticed a short monopole tower on the east side of US 27 (the downtown side, not the Golden Gateway side) between M.L. King Blvd. and West Main Street. The thing that caught my attention and makes me think that this isn't a cell/PCS site is that it has the following antennas:

- microwave dish
- VHF yagi
- VHF or UHF omnidirectional

The yagi and the dish both point towards Signal Mountain. I'm just a little puzzled by this site. Anyone who knows anything about it... please either post something as to who uses it or drop me a line direct.

Stay cool,

Matthew, KF4LHP

Good eye.

That is the new home of WJTT & WMPZ (Brewer Broadcasting) studios and offices. Microwave is the STL (studio to transmitter link) pointed at Red Bank transmitter site. It's under construction now and will be a very nice facility - completion in the next couple of months.

491. MFJ and TenTec VHF rigs

Yahoo group: chattradio
Date: 1999-07-25 15:23:01 UTC
From: k4yz@aol.com
Topic: 491 Message: 491

QST de K4YZ,

Was just wondering if anyone in area has had any experience with the MFJ 2M SSB rig, or has seen the new TenTec 6/2Meter all mode rig in person?

The new TT rig looks neat, but after looking at it on the TT webpage and considering the price of an ICOM IC-706 with HF coverage added in, it seems a bit pricey at an MSRP of $800.

Any info appreciated.

Some notes:

Lake Winnepesaukah has applied for three new frequencies. They are:
- 153.230
- 153.560
- 158.370

The Target on Lee Highway @ East Brainerd Road is on 151.625 (if you
care, this is probably useful only if they're interfering with you).
Ruby Falls and the Budget Rent-A-Car are also on this channel.

WDSI-Fox 61 has applied for (and I think already started using) 450.0925
and 450.1025 MHz for two-way ops...

That's all for now, more useless information as I find it. :)

Don't know. They've had radios for a while, appeared to be VHF, so they
may be replacing their old ones or adding more to their inventory.

I think, from where I'm at, that I can pick them up on my system... will
try next weekend.

From: K4YZ@xxx.xxx
Topic: 499 Message: 499

Greetings All,

This may be old news to the list, but I haven't seen it before so I will repeat it. 151.625 is also used by the United States Hang Gliding Association, along with 151.925 for air-to-air and air-to-ground communications by it's members.

This is a bit problematic in Sequatchie County as the Sheriff's Dept uses .625 as it's "talk-around" channel and there is sometimes conflict. I had an informational session with thier dispatcher one day when one of the Deputy's told a pilot to "get off the Sheriff's frequency". Whoever programmed thier radios obviously didn't tell them that this is the "catch-all" frequency nationwide.

If you are around Lookout Mtn Flight Park, or come to Sequatchie Co via Corridor J on a pretty day, you may catch some of them.

Neither my FT-8100 mobile and FT-50 handheld will take .0925, but .09 or .095 will work perfectly fine. These radios have a wide enough bandwidth (and the 450.0925 repeater has a wide enough bandwidth) that it works with no audio distortion.

506. Chattanooga, TN - Volunteer Army Ammunition Plant

Yahoo group: chattradio
Date: 1999-07-29 02:10:55 UTC
From: Matthew Sadler
Topic: 506 Message: 506

Hi all,

I've started working on a page about the somewhat-decommissioned Volunteer Army Ammunition Plant in Chattanooga, TN. The Army mothballed the plant in the 70s after Vietnam and it has been that way ever since, up until the last few years when the Army and ICI Americas (site manager) started opening the site to commercial and industrial development.

Check it out at http://kf4lhp.virtualave.net/vaap/index.html and give me your comments. I've got some things in the pipeline that will be added as time goes by.

19216 is East Ridge Fire, mostly the batallion chiefs and such. I think
one 800 radio is assigned per apparatus, but they are still using
154.310 and will certainly continue doing so, what with pagers and the
new repeater they just got.

I would question the validity of 8080 for technical reasons.

522. Another new 440 repeater???

Yahoo group: chattradio
Date: 1999-08-08 01:46:13 UTC
From: Chris Palmgren
Topic: 522 Message: 522

I found a new amateur radio repeater in the Chattanooga area on 443.950. Apparently, I must have been out of the room when it was supposed to ID and I did not see a listing in the new SERA journal for this machine yet. The machine is nearly full scale on a HT near Soddy-Daisy. Does anyone know the location of the repeater. The courtesy tone on the repeater sounds like the one used by NASA when talking with the space shuttle.

Thanks!

523. hot scanner news from rs!!!!!

Yahoo group: chattradio
Date: 1999-08-08 07:06:24 UTC
From: Dewey Bryant
Topic: 523 Message: 523

New Info! The Radio Shack Pro 92 will be a 500 channel, trunktracking scanner that will monitor all of the Motorola trunk systems,EDACS, and LTR. It will also have alpha tagging for trunk ids.

It will also include SAME weather reports,CTCSS/DCS decode and a cloning interface.

Coverage: 29-54, 108-174, 308-512, 806-960

The Pro 92's cousin is the Pro 94, which is a 1000! channel handheld.It will track all analog Motorola systems, and EDACS trunked systems. It has extended coverage which includes the 220MHZ, and the 1240 MHZ ham bands. It too will have SAME weather alert, although it will not have the display. Memory is arranged in 20 banks of 50 channels, with 20 priority channels.

Coverage: 29-54, 108-174, 216-225, 406-512, 806-960 and 1240-1300 MHZ.

Also the Pro 2052 will be the base equal. It will be a 1000 channel scanner with trunking capabilites, along with computer control, military air and everthing else. It will not be able to track LTR systems. It also has SAME weather alerts although with no display, and a built in RS-232C serial interface which permits computer control, uploading, downloading, and cloning. It has also 20 priority channels,data skip,and search skip.

Coverage: 29-54, 108-512, 806-960, and 1240-1300 MHZ

From: LFDGAJR@xxx.xxx
Topic: 525 Message: 525

Has anyone else noticed that Chattooga County Sheriff''s Office is using 159.690 MHz today. This frequency was being used by Chattooga County EMS and Rescue. The only thing I've heard that might explain the situation was a Chattooga SO unit this morning around 3:00 am stating that all the power was still out on the North End of the county. I guess they could have sustained damage to the SO repeater during the electrical storm over the night. Anyone know why they are using this frequency?

526. GA Corrections Escape

Yahoo group: chattradio
Date: 1999-08-16 17:43:56 UTC
From: LFDGAJR@xxx.xxx
Topic: 526 Message: 526

At 13:20 EST 153.740 Mhz (Georgia Corrections Primary) is very active with information concerning what appears to be an escape of one inmate from the Walker State Prison.

Walker 911 is advising Sheriff and PD units assisting in the "search" that the "subject they are tracking" was last seen on Straight Gut Road heading North wearing his "usual attire" prior to the alarm being sounded. (154.875 Mhz)

Other active frequencies include 151.130 Mhz (Walker Sheriff's Priority), 154.875 Mhz (Walker Channel 5. Appears this channel is being used as the main channel for all Walker County assets involved in the search), 155.310 Mhz (Walker County PD Operations), 156.000 Mhz (Corrections unit to unit. Being used very little).

At 13:35 EST Walker 22 is advising he has spotted the subject on Striaght Gut Raod. (151.130 Mhz)

At 13:36 EST Walker 41, 22 and a Sgt from Corrections are advising they have the subject in custody. (151.130 Mhz)

At 13:40 EST inmate turned back over to Department of Corrections control. (151.130, 153.740 Mhz)

At 13:45 EST Control Tower at Walker State Prison is still advising all DC34 housing units to hold there traffic on primary unless of an emergency nature. (153.740 Mhz)

529. new talkgroups

Yahoo group: chattradio
Date: 1999-08-21 16:12:55 UTC
From: John Pless
Topic: 529 Message: 529

Couple new talkgroups on the Chatt/Hamco 800 system. I'm hearing what sounds like a console at 911 center keying up on 19600. It also keys up in encryption mode, 19608 (the analog id plus the status bit 8 creates digital talkgroup) I've also heard 19568 analog keying up as well. And I've heard a console keying up on 20752. Given that encryption mode has been in use on these, I'd speculate law enforcement?
I've also noticed when a priority call goes out on all CPD talkgroups, it now shows up as a crosspatch ID. It's the "normal" id +7 status bit. Example, Adam Channel 16432 shows up 16439 when "all call" is sent. This did NOT happen before....all calls just showed up on whatever talkgroup was first picked up by TT.
While this has been going on, I've heard radio shop folks on 17840 talking with Motorola guys, something about upgrading consoles at 911 center. Can anybody shed any light on these latest things?
Radio shop talkgroup was also active with traffic about a crane and other stuff going up mountain, giving directions toward White Oak Mnt. I would presume this has to do with getting the new site, possibly county on line w/ system?????????

The new consoles are for the EMS and Fire for Hamilton County including E.R. and i think Red Bank but ain't sure. Bravo team is downtown not sure if it's the bike patrol, i think it is because they still have Charlie in downtown also and I'm starting to hear Bravo dispatched more into the night now around weekends. Delta team has Brainerd area and George team has east of 153. I don't know about the all call thing but they still simulcast on all channels when putting out 422's and major BOLOs. And in case you missed it:
Ch#1: adam; ch2 baker, ch3 charlie, ch4 info, ch5 mutual aid, ch6 car-car, ch7 citynet1, ch8 citynet2, ch9 disaster1,ch10 disaster2, ch11 disaster3, and ch12 on a george team radio is labeled "Backup 1" which I have no idea what it is other than maybe when the system fails on trunked that they may go to that channel like a untrunked radio. No other channels are programmed in for patrol units but on SWAT, detectives, and Higher Ups I have no clue from ch7 on up. I do know that detective ch 16848 is labeled ch 7 on their radios. I'm assuming that ch7 is programmed with whatever the officer is assigned to: SWAT, Detective, Patrol, etc.. but i don't know for sure. Wonder if the "new" tgs are for Sheriff?!?

531. Dangerous Hurricane Bret Montioring Frequencies...

Yahoo group: chattradio
Date: 1999-08-22 01:27:09 UTC
From: Chris Palmgren
Topic: 531 Message: 531

As dangerous category 4 (as of 9pm ET) Hurricane Bret heads toward the Texas Gulf coast, I thought some frequencies might be of interest for monitoring purposes.

All frequencies listed below are in megahertz and will activate on different bands at times due to propagation.

Hurricane Watch Net: 14.325 USB (Net control with station W4EHW at National Hurricane Center in Coral Gables, FL)

Texas ARES Emergency: 3.873 LSB, 3.935 LSB (health & welfare), 7.273 LSB (alternate), 7.285 LSB, 7.290 LSB (health & welfare)

Texas RACES: 3.975 LSB, 7.248 LSB

Central Gulf Coast Hurricane Net: 3.873 LSB, 3.925 LSB, 3.935 LSB, 3.993.5 LSB (health & welfare), 7.225 LSB, 7.235 LSB, 7.260 LSB (west coast), 7.264 LSB (health & welfare), 7.283 LSB (outgoing traffic only), 7.290 LSB

Gulf Coast Outgoing Traffic: 3.967 LSB

American Red Cross US Gulf Coast Disaster: 7.240 LSB

Texas Emergency: 7.240 LSB, 7.250 LSB

Gulf Coast Health & Welfare: 7.264 LSB

From: "Victor Healey" <fourphun@...>
Subject: Cobb and Chattanooga in same 245 XLT Bank

I recently noticed that you can combine the original Cobb TRS frequencies with Chattanooga's
frequencies in the same bank. These total 35 frequencies but five of them are duplicated.
The 856-860.2125 group is common to both. Cobb has added some new frequencies but these are
being used for digital communications and not too useful in the BC245 XLT. This may be to the
advantage to those that live in NW GA and SW TN who may wish to monitor both systems while
passing along I-75. You can hear Cobb GA as far north as Bartow County GA and the TN system as
far south as Dalton GA. The systems are far enough apart that there is no question as to which
TRS data channel you will lock onto.

535. Trunked System Question/Angel EMS

Yahoo group: chattradio
Date: 1999-08-24 02:58:25 UTC
From: LFDGAJR@xxx.xxx
Topic: 535 Message: 535

I had the privelige of looking at an Angel EMS radio today. Let me start of by saying that they actually have several radios because of the different systems they are dispatched on. Catoosa and Walker Counties (Georgia) dispatch them on their respective VHF-Hi frequencies, but they are dispatched by their office on 800 MHz Motorola Trunked equipment. They use the Chattanooga Communications SMR. The personnel I spoke with (as is the case with several users of SMRs I have spoke with) incorrectly believe (or maybe where incorrectly lead by a sales agent to believe) that they use a "private" system on which noone besides them can hear what they say. A paramedic told me that "it is on an analog trunked system" and that "it is the best communications system I have ever used".

Here come the questions. Does anyone know what Talkgroup ID (Trunktracker) they use? The screen of the mobile radio in the unit read "1A" does this offer any insight into what the talkgroup might be? If so can someone please explain how you can decode this information from the screen display. I believe this system is a Motorola Type I system.

Thanks for the help. I'm still trying to learn as much as I can about trunking and radio in general.

537. Medical Telemetry

Yahoo group: chattradio
Date: 1999-08-31 21:55:21 UTC
From: LFDGAJR@aol.com
Topic: 537 Message: 537

I was wishing to compile information on frequencies used for medical telemetry purposes in various parts of the US. I do know that Hutcheson Medical Center EMS (the 911 contract EMS agency for my county) uses cellular phones hooked up to a modem to transmit the EKG and other information to the hospital.

My main interest in this is, of course, not to decode (or attempt to decode) private patient information, but rather to get a better idea of how different agencies deliver this information in different parts of the country. This is of interest to me for two reasons (1) I love learning all I can about communications systems. (2) I start EMT class on October 4.

In order to not tie up the main lists please respond via private email to LFDGAJR@....

All help is appreciated.

Thanks Very Much,
Christian KF4ZMB
Northwest Georgia

538. Chattanooga Communications TRS

Yahoo group: chattradio
Date: 1999-08-31 23:59:40 UTC
From: Jim Knight
Topic: 538 Message: 538

I have had my new BC245XLT (trunktracker 2) for a few weeks now and have spent some time studying the Chattanooga Communications TRS. You can set this radio to alternate between the talkgroup number and the frequency being used. I programmed in all the freqencies on Matthew's web page http://www.qsl.net/kf4lhp/trunking/comm/chcomm.html and also all the frequencies listed by John Pless in his post to this group on Sept. 2 of last year. (John's list has 22 frequencies, all but one of which are on Matthew's list of 12.) I used fleet map E1P1 as Matthew suggests and was able to follow conversations without any problems. From my observations it appears that only 12 frequencies are in use in what I can hear at my location. Here they are:
851.0125, 851.2375, 851.5875, 851.8375, 852.6375, 852.9625
853.0125, 853.8625, 854.3125, 854.7375, 861.2125, 862.2125

These are not exactly the same as Matthew's list, but in several days of observation I have never seen one outside this list used.
I also have a text file of all the active talkgroups heard which I will email to anyone that wants it. No positive ID's beyond those Matthew has on his web page, but a big list of those in use with general categories (such as towing, trash pickup, etc.) on some.

From: Michael Martin
Topic: 537 Message: 539

Not knocking anyone, and I know it's a tad off topic, but, many, many years ago, I used to love to watch EMERGENCY. It was fast pace, exciting, and you got to wear the fancy uniform. Well, shortly after that, I became a EMT, and then a Paramedic. It was fast pace (work 24-48 straight, without sleep), exciting (if you call getting shot at, stabbed, beat up, puked upon, exciting) and got to wear the fancy uniform (that I had to buy with my own money). Now, don't get me wrong, I DID love the job! I would love to do it again, but I'm getting on in my years (a whole 44). But getting back to the EMS aspect, Johnny Gage would put the pads & leads on the patient and Roy DeSoto would patch them into the bio-box and send the telemetry to the hospital. Wow! The MD on the other end could read it and confirm what the Paramedics in the field saw. When I first go on a unit in 1980 as a basic EMT, I asked my Paramedic partner, while on a heart attack call, why he didn't "send a strip" to the hospital. His answer was "you have no business working on a patient if you can't read the strip yourself!" I got my Paramedic license in 1985 and even the doctors at the ER's told me the same thing "if you have to send a strip to the hospital, I'm not going to give you any orders because you don't know what you are doing!" Now I don't know how they do it in other parts of the country, but if either you have to send a strip to the hospital or the MD ask for one, I really don't want that Paramedic working on me, because both he and the doctor should have total confidence in the person in the street. Sorry to be long winded about it, but I just had to put my $0.02 in. Michael Martin EMT-A 11568/CT 901, ret. In reply to your letter I would like to start off by saying that I am an Explorer with Hutcheson and have rode with EMS several times. I have never heard that they used the telemetry modem. One of the reasons behind wanting this information came after reading an older JEMS magazine and seeing an ad for the "telemetry equipment" being a radio buff I thought it would be interesting to see what all frequencies where being used for this purpose.

Thanks for your response,
Christian KF4ZMB

Michael, The folks at Hutcheson are very proud of their "emergency room on wheels" as Dr. Robert Jones, president and ceo, has pointed out in many interviews I've conducted with him. His contention is, in this rural northwest Georgia area of ours where hospitals are quite a ride away, the ambulance is directly linked with the emergency room and therefore with the attending er physician(s). It always sounded like a good argument to me, but then I pray everyday that I'm not in need of medical care because the closest hospital is an hour away. Chris Conley >From: "Michael Martin" >Reply-To: chattradio@onelist.com >To: >Subject: Re: [chattradio] Medical Telemetry >Date: Tue, 31 Aug 1999 20:27:09 -0400 > >From: "Michael Martin" > >Not knocking anyone, and I know it's a tad off topic, but, many, many years >ago, I used to love to watch EMERGENCY. You are quite correct about most of that, Chris. One of the problems with EMS communications in the Chattanooga Valley is that there is a SEVERE lack of standardized "on-the-air" terminology, and my most recent former employer, the very same Hutcheson Medical Center, is one of the worst at that.

Furthermore, while it's impossible to impart an understanding of radio propagation or the vagraties of simplex vs duplex communications to ALL nursing or EMS staff, there is an obvious lack of concern by hospital administrators in this matter and it will get people killed.

At Hutcheson, they have a whole crop of "new grad" nurses that are being hired in. The have NO prior ER experience, other than what they had during student nursing rounds, and they have little if any other prior nursing experience period. None of them, to my knowledge, have any EMS experience, so you can stand-by for some really rough radio procedure from HMC.

To top it off, HMC's H.E.A.R. net callsign KXX319 expired over 10 years ago, and the only other call sign assigned to them, WPCW311 doesn't include the frequencies they ARE operating on. Yet after I passed this knowledge on to the previous Nurse Manager AND her successor, no one seems to be interested in correcting it before the FCC tags them with an NAL. Glad they can afford it...I couldn't!

Anyway, back to "standardized terminaology". The FAA demands it of pilots and Air Traffic Controllers for a very specific reason and one that should NOT be lost on EMS/ED communications...when ATC tells a pilot to do a specific thing, there is NO question as to whom the controller is talking to and what the controllers desires are. And when the pilot expresses his/her needs/desires/intentions to ATC, they know what the pilot intends to do.

When I was at HMC, EVERYTIME I keyed the mic I repeated the unit ID that I was addressing and who I was...absolutely NO question as to who was telling who what. It may be repititious, but there was NEVER any doubt about who was getting/giving the orders.

On the other hand, too many ED's fail to recognize the fact that the H.E.A.R. frequency (155.340MHz) is a shared simplex frequency and that at any given moment there can be more than one unit on the frequency calling. I personally have heard ED's respond to calls with "Unit calling Podunk Emergency go ahead..." without EVER identifying who they were talking to...and on these occassions MORE THAN ONE unit was calling!

The only answer to the problem is the institution of standardized phrasology on EMS communications nets, and education of the nurses and field EMS personnel as to the limits and capabilities of the radios.

> kg4bod

It will track more than 1 trunked system at a time, or trunked and non-trunked frequencies together. And yes, there are more scan lists than the 235 (10 vs. 5) per trunked system. The catch to this is that if you are monitoring a busy trunked system like the Chattanooga system or the Nextel system, it will continue to monitor that system until it detects no activity, and then it will scan the conventional frequencies or move on to the next trunked system. This can result in effectively monitoring just 1 trunked system for a long period of time. It would have been a good idea (though I don't know how difficult it would have been) to allow the user to select a maximum time to spend on each trunked system and each group of conventional frequencies. Still I do like this radio a little better than the 235 purely because of the extra scan lists, extra service scan function (railroad freqs), and the ability to display both the frequency and talk group number on a trunked system.
Oh yes, another drawback of this radio over the 235 is that it only comes with one battery pack and no charging stand. I figure this is how Uniden kept the price low. My advice would be to get a 245 if you can, but keep the 235 for the charging stand and maybe to dedicate it to one trunked system while monitoring mixed stuff on the 245.
All this is just my personal opinions, but I hope it helps.

Chris:

Most doctors are very proud of their setups. But it makes me remember the EMERGENCE where Bobby Sherman was a rookie ER MD and the boys in the field were sending him a strip. The patient was conscious & alert x3, talking, showing a normal sinus rhythm, and Bobby was reading v-fib at the hospital (interference caused it). Well, "Bobby" ordered the crew to convert the patient (shock that is, not from a Baptist to a Mormon) because of what he saw. It's a great idea, when it works, but I'll still stick to a, hopefully, competent paramedic and his/her knowledge.

Richard,

There are three branches of MARS, NavMarCorps, Air Force and Army. I
don't believe they have more than a couple of mutual frequencies.

Also, there are National Guard allocations in this part of the spectrum,
as well as Civil Air Patrol and the Coast Guard Auxiliary.

559. BORTAC Communications System

Yahoo group: chattradio
Date: 1999-09-02 16:06:05 UTC
From: Dewey Bryant
Topic: 559 Message: 559

FYI - CHATTRADIO-HOW OTHER PEOPLE DO IT...
[T2] Digest Number 76
Subject: Border Tactical (BORTAC) Communications System Testbed

t>
Reply-To:
NEXTEL1@onelist.com
To:
NEXTEL1@onelist.com

From: marcel <marcelrf@...>

Project Title: Border Tactical (BORTAC) Communications System Testbed

Project Description:

The BORTAC Communications System is an operational system that connects the dispatch centers of 12
Federal, State, and local law enforcement and public safety agencies in San Diego County. It has been a joint
effort of the National Institute of Justice (NIJ), the Counterdrug Technology Assessment Center (CTAC) of
the Office of National Drug Control Policy (ONDCP) and the Navy's Public Safety Center in San Diego. NIJ
provided design and project management, CTAC provided funding for hardware and dedicated phone circuits,
and the Navy provided technical management and a facility to be the central connect point for the circuits.

The implementation relies on the use of off-the-shelf communications circuits and radio system software to
create a "patch" that connects different agencies' radio systems. The "patch" allows patrol/mobile units to
achieve real-time, voluntary, and unencrypted voice communications interoperability. The "patch", once
enabled, eliminates the need for the dispatcher to relay his or her officer's location and questions to the other
dispatchers who repeat the information to their officers. The officers are able to speak directly to one another
without the intervening relay process. The result is more accurate exchange of information and more timely
response by each officer. Increased safety is an important result of the patching process. (NOTE: Each
officer has to be operating within the existing coverage of his or her radio system. Officers cannot use this
system if they leave their native region.)

The names of the participating agencies are displayed on a central computer screen. When two or more
agencies request that they be connected, a dispatcher at the central location uses a mouse to connect the
appropriate icons on the computer screen. At the same time the software connects the communication circuits
into the equivalent of a conference call. In this case, the voices heard on the conference call are the audio
portion of each agency's radio frequency that has been designated for that patch.

Multiple agencies can be patched together and multiple patches can be operating independently of one another.
When the agencies have completed the operation they notify the central center and a dispatcher uses a few
mouse operations to disconnect the participants. No agency is ever added to the patch unless that agency
agrees. In this way the autonomy of each system is preserved.

Status Report:

The BORTAC testbed was established in June 1996 and initiated through a tabletop exercise involving real
communications on December 4, 1996, with five different agencies.

Since December 1996, the BORTAC communications testbed has been utilized several times each month by
law enforcement in the San Diego area for an array of activities, including regional auto-theft task force
operations, truancy sweeps, counterdrug sweeps, police pursuits, special cross-border events, gang
suppression, etc. Though the system was anticipated to support "pop-up" operations, such as pursuits moving
amongst jurisdictions, it has also been used to support planned operations wherein agencies agree to
multi-agency operations with the agencies connected through the BORTAC system.

NIJ's Border Research and Technology Center and the Navy's Public Safety Directorate, were the technical
managers of the BORTAC system during its development. The system is now operational and is managed by
the users through a committee. The issues facing the system all revolve around interagency procedures and
protocols. As a consequence, the San Diego Police Department and the California Highway Patrol have
assumed joint leadership of the BORTAC system and are now taking the lead in guiding its progress.

The BRTC and the Navy will continue to participate and provide guidance and reminders of lessons learned on
an as-needed basis. This signals a successful enterprise in which Federal funding and technical know-how
were used to initialize and organize a system that is now in the hands of state and local agencies with border

enforcement responsibilities. The agencies are pleased with the system and in the words of one user: "[It] . . .
sounded like officers from other agencies were in the backseats of our vehicles."

Replication of this communications testbed is being implemented in Imperial County, California. Another
system is in the design phases for the San Gabriel Valley of Los Angeles county and a fourth system has been
requested for Brownsville, TX. As in the San Diego system, the NIJ, through its Western and Border Centers,
the CTAC and the Navy are all working jointly to make these systems a reality.

Participating Agencies:

California Highway Patrol
San Diego Police Department
San Diego Sheriff's Department
Chula Vista Police Department
Naval Base Security
Navy Investigative Service
Navy Fire Department
U.S. Coast Guard
U.S. Border Patrol
Federal Bureau of Investigation
Drug Enforcement Administration
U.S. Customs Service

Hello Everyone,

Does anyone have (silly question) the FAA frequencies for CHA and surrounding fields. Also, any air-to-air or air-to-ground frequencies of interest?

I'd also like the studio link frequencies for WSKZ's traffic spotter, other frequencies for LifeForce (I have all the med freq's at 155 and 462 MHz), etc.

Thanks!

Steve, K4YZ

Check http://www.qsl.net/kf4lhp/transportation.html for frequencies for any of the local airports, as well as taxi companies and railroads.

See http://www.qsl.net/kf4lhp/media.html for the media two-way radio channels. As far as LifeForce showing up on other channels, they do use some of the aviation channels assigned to Lovell Field for clearance through ATC, and they have frequency (and PL)-agile radios for talking to LZ command.

From: marcel <marcelrf@...>
Subject: Pennsylvania's Statewide Public Safety Digital Radio Communications System.

BW)(MA-M/A-COM) Pennsylvania Finalizes Contract With M/A-COM's
OpenSky for Statewide Public Communications Safety System; Wireless IP
Network Contract Valued at $95 Million
www.NEXTEL1@onelist.com

LOWELL, Mass.--Sept. 2, 1999--M/A-COM, Inc and AMP Incorporated (wholly
owned subsidiaries of Tyco International Ltd. NYSE:TYC) today announced that a contract has been
signed and finalized to deploy M/A-COM's OpenSky(TM) Wireless IP (Internet Protocol) Network for the
Commonwealth of Pennsylvania's Statewide Public Safety Digital Radio Communications System.
Pennsylvania's intent is to deploy a state-of-the-art digital radio system. "No other state has a
comprehensive statewide public safety radio system to rival this new network," said Thomas G. Paese,
Pennsylvania's Secretary of Administration. "The digital technology employed in this radio network offers
improved public safety communications, and we think it represents a new model that other states will
want to copy."
The contract, with a funded value of $95 Million over the next 18 months, calls for M/A-COM to
supply infrastructure equipment for a new, digital voice and data radio communications network for the
Commonwealth of Pennsylvania. The statewide radio system, which will employ OpenSky Wireless
Internet Protocol (IP) network technology, will be a thoroughly modern system. The network

infrastructure will be comprised of several hundred base stations along with regional control centers and
network control centers. The statewide system is slated for final completion in 2001.
The base stations, which provide a voice and data interface between mobile or portable radios and
dispatch centers, are the backbone of a radio system which will provide the capability of tying statewide
agencies and others into a single network. At the state level users will run the gamut from public safety to
environmental protection to transportation. Other potential users include local law

enforcement, fire and
emergency medical service providers.
"We've targeted four major market segments for OpenSky technology: public safety, transportation,
utilities and private mobile fleet management," said Dennis Martinez, Director of Wireless Systems at
M/A-COM. "The Pennsylvania system will serve as a template for a next generation of state and local
communications systems." Martinez credits Pennsylvania's progressive leadership in upgrading its radio
infrastructure with the innovative OpenSky technology. "Although this type of system has already been
implemented for large fleet management and transportation applications, Pennsylvania will have the first
statewide, multi-agency, fully digital voice and data communications system in the country."
www.NEXTEL1@onelist.com
M/A-COM's OpenSky

M/A-COM's OpenSky is a suite of products implementing an integrated digital voice and data system
based on the Internet Protocol (IP). Thus, IP applications or devices can easily access the OpenSky
network, bringing the greatest connectivity of any public safety network today. OpenSky is digital, but
provides interoperability with analog radios, making it possible to cost-effectively plan radio upgrades or
preserve the equipment of volunteer public safety units. They all work with the OpenSky network.
OpenSky's IP Backbone carries all voice messages in a compressed and encrypted format. It is
end-to-end encrypted over the air and over the backbone.
OpenSky uses Voice over IP (VoIP) and compression technology to provide five times the voice
capacity of a typical circuit-switched network. This means more available network capacity when it is
needed during critical emergency situations.
OpenSky's network technology creates scalable configurations. Because it is an IP network, base
stations can be added or subtracted as usage dictates, without unnecessary equipment to regulate traffic to
the base stations. This translates to cost effective network expansion.
Most importantly, OpenSky provides connection to the network exactly when public safety officials
need it, and exactly where they need it. OpenSky's Vehicular Repeater brings network connectivity to the
most remote areas. It brings the network to the user, providing continuous portable voice and data
coverage.
OpenSky is at work today delivering results in both national and regional networks

supporting private
and public voice/data network communications requirements.

About M/A-COM

M/A-COM, a wholly owned subsidiary of Tyco International Ltd., headquartered in Lowell, MA, is a
leading supplier of radio frequency (RF), microwave and millimeter wave semiconductors, components
and IP Networks to the wireless telecommunications and defense-related industries. M/A-COM's products
include semiconductor devices, RF integrated circuits, passive and control devices, antennas, subsystems
and systems. Employing more than 2,800 people, M/A-COM has offices and manufacturing facilities
worldwide.

About AMP Incorporated

An established worldwide leader in communications components and cabling products, AMP Incorporated, a Tyco International Ltd. Company, provides a comprehensive range of product and service
offerings that include the design, manufacture, installation, and support of complete premises cabling and
LAN interconnect systems solutions. Building on core competencies in the design and manufacture of
open cabling systems based on fiber optic, as well as traditional copper twisted pair technologies, AMP
provides customers with single source solutions based on industry standards. AMP is headquartered in
Harrisburg, PA.

About Tyco International

Tyco International Ltd., a diversified manufacturing and service company, is the world's largest
manufacturer, installer, and provider of fire protection systems and electronic security services, the largest
manufacturer and servicer of electrical and electronic components and underwater telecommunications
systems, the largest manufacturer of flow control valves, and has strong leadership positions in disposable
medical products and plastics and adhesives. The Company operates in more than 80 countries around the
world.

For those that are interested I found out that the employees at the La Fayette Golf Course use FRS radios on channel 1 for their maintenance traffic. I have a friend who just got a job doing maintenance there he also told me that occasionally they switch CTCSS codes when other FRS users in the area switch their codes to the code they use. They were using channel 2 but then the stockmen at the ACE hardware nearby starting using that channel and, according to my friend, the ACE personnel "chat" on the radio "considerably" and the Golf Course crew hardly uses the radio.

572. some 800 hints

Yahoo group: chattradio
Date: 1999-09-06 19:49:48 UTC
From: John Pless
Topic: 572 Message: 572

Here are some new talkgroup id's for the chattanooga hamilton county 800 system. i won't explain on this list exactly how this works, kinda complicated, but if you like i'll explain if you email me direct.
the talkgroups are used when a dispatcher wishes to call all units, on all other talkgroups. for example, a lookout for a suspect, or an "all call" for a shooting, burgalry in progress etc.
lets say "adam" dispatch wants to alert all hixson cars, and others on "baker" "charlie" or "c-net 1." as you know adam dispatch is on 16432. if you add the so called "status bit" that sends out a digital message to all radios to tune to this message, you'll add the numeric value of 7 to the talkgroup where the dispatcher is working off of. so, 16432 becomes 16439. all pd radios will hear message. this holds true for other dispatchers. say "charlie" dispatch wants to call all units. charlie is 16816, PLUS 7, making the all call talkgroup 16823.
you might have noticed the status bit change, when units go "encrypted." if "baker" channel units use encryption, they'll pop up on trunktracker as 16472... the original 16464 PLUS status bit of 8.
If you don't put in these "all call" id's...you'll miss important messages if your scanning your memory lists in trunktracker. these kind of "status bit" variations are common to motorola systems, and were just implemented here recently. if you notice talkgroup id lists on internet from other cities... they'll have similar stuff.
here are the regular and all call id's:

assignment regular / all call
---
adam dispatch 16432 / 16439
baker dispatch 16464 / 16471
charlie dispatch 16816 / 16823
info channel 16496 / 16503
mutual aid 16528 / 16535
car to car 16560 / 16567
city net 1 16784 / 16791
city net 2 16688 / 16695
(yes, I've heard a dispatcher use c-net 2 as an all call!)
and keep an eye on new talkgroups too while in trunk search mode on your tt.... i've heard 19600 and 20752 several times keying up... and heard encryption on 19608 (19600 + 8) not sure what they're used for... but expect more county stuff going on line, soddy daisy, etc, since the white oak site is about to begin rf testing and go on line.
hope all this helps!
jpl

I forgot to mention in my post about the '245 that it by default will
recognize these status bit variations to the standard talk group ID's
that you program into your scan lists. (You can turn this feature off
if you don't want it.)

574. status bit stuff

Yahoo group: chattradio

From: John Pless
Topic: 574 Message: 574

here's info about the status bits attached to talkgroups. you take the regular talkgroup id, then add the corresponding value below to create patch/ new talkgroup. example, 16432 across all city radios becomes 16439.
jpl

Motorola Status Bit Special Functions:

ID+1 = ATG
ID+2 = Emergency
ID+3 = Crosspatch
ID+4 = Emergency Crosspatch
ID+5 = Emergency Multi-select
ID+6 = ? (possibly not used)
ID+7 = Multi-select
ID+8 = DES/DVP (digital encryption)
ID+9 = DES ATG
ID+10 = DES Emergency
ID+11 = DES Patch
ID+12 = DES Emergency patch
ID+13 = DES Emergency Multi-select
ID+14 = ? (possibly not used)
ID+15 = DES Multi-select

575. 154.055?

Yahoo group: chattradio
Date: 1999-09-09 19:37:34 UTC
From: Larry Van Horn
Topic: 575 Message: 575

OK Chattanooga. I could use some help from your neck of the woods. Is the school bus drivers I'm hearing on the repeater output on 154.055 coming from you folks direction? I pretty much have eliminated everything else in the FCC database except the repeater licensed to the City of Chattanooga located on Lookout Mtn on this freq. The description of the licensee in the FCC db wasn't much help, I hear no CW IDs, only the fact that this one is being used by bus drivers (complaining about the kids, returning them to school when they act up, etc.)

So is 154.055 r/out being used by the City for bus service or is it another jurisdiction that is using the repeater?

It is licensed to the city, but the city schools have been turned over
to the county, so it is now used by our county schools.

The base station used to identify as KRJ784, their callsign, but I
haven't had any time to listen this school year so I'm not sure if they
still do or not. The repeater is still on Lookout Mountain and covers
most all of the county.

Schools maintenance is on 800 MHz trunking and eventually the buses will
be too (this from a very reliable source), it's just a matter of coming
up with the $$$.

Best bet is the perennial favorite, 14.325 MHz on the HF bands, which is
the hurricane watch net. Anyone else have anything to tune to?

That's the only one I know of offhand.

If I had to guess, I would suspect that rather identifying the poor quality as interference from another service, the kz106 guys would identify the interference as a problem in their equipment, and decide it is time to upgrade... I remember we were using 153.29 at the Giant... well within reach of the never diminishing infinite pager sidebands. 585. SW North Carolina Friday Afternoon Intercepts

Yahoo group: chattradio
Date: 1999-09-17 20:26:05 UTC
From: Larry Van Horn
Topic: 585 Message: 585

Got some neat stuff this afternoon at the office for a change. The 149.800 intercepts were a lot of fun to play with dancing between the R-8500 and the NRD-345 receiver in the showroom.

3.000 MHz HF Heard aircraft 560 come up in USB and try to conduct a radio check, no answer.

139.075 MHz Some outfit (probably Army: "Kilo, Juliett, and Post units") is up this one pulling parking duties at the big Chickamanga Military Battlefield reactment. Wonder which Army base is getting tapped for these duties? Nice signal levels here in B-town considering where they are coming from. (NFM)

149.800 MHz Unid aircraft (possible USA NG helos) in NFM talking with another unid about HF radio problems, said something about coming up on 3.00 MHz HF. Other pilot helping him setup comms on HF. Mentioned setting up test for a KY-100 and heard a data burst on 3 MHz. Heard one brief burst on 3 MHz USB from one of the aircraft and some analog voice. One of the pilots "56" (who also showed up on three megs) mentioned they were currently running at the Andrews-Murphy airport. At 2031Z.

149.970 MHz Russian Cosmos military navigation satellite with typical FSK downlink at 1920Z. Other frequencies to watch include 149.910, 149.940 and 150.030 MHz. All of the Russian nav birds on 150.0 MHz are civilian navsats.

168.325 MHz Park Rangers at Chickamanga Battlefield up and running for the reenactment. (Repeater output/input 167.075). (NFM)

234.800 MHz Unid units with weak audio noted here at 1839Z. (AM)

372.200 MHz PAT 204 (USA aircraft) working Dobbins PTD with arrival info (coming from Andrews) at 1829Z. (AM)

73 all and good hunting.

From: K4YZ@xxx.xxx
Topic: 586 Message: 586

You'd ever consider Sequatchie County to be a hotbed of military flightops but it is!

Seems Uncle Sam must be gearing up it's low level routes again. I got buzzed by two B-1's yesterday around 3:00. There's an intersection of two low-level routes in NW Sequatchi County. One route (the heavy route) comes from the east-northeast and heads west-northwest from my location. (About 1 mile south of the highway 111 & 399 intersections).

The other, a highspeed route, comes from the north and proceeds down the draw to the southeast. Usually this route is flown by USN/USMC F-18's and USAF F16's, although I have seen USMC CH53E's along the fast route.

There's a third route, but it's not very active. Usually C130's come up the valley from the south along the east sid of the valley.

Question: does anyone have the military UHF freq's for these routes? I have been trying to keep an ear to CHA tower and ATL center to try and get a hold on these routes, but so far no luck. One of my concerns is one of these days one of those fast movers is gonna stray just a bit and wind up eating a hang glider near Dunlap.

If anyone is heading over to the Chickamanga battelfield this weekend and happens to stumble on some US Army types providing comms (on 139.075 ;-)) I would be most appreciative if you could try and ID were these folks are from.

I have several choices, but need some onsite intel to narrow down who is using that freq. 139.075 is a regular here during the week, but I still haven't tied them down to a specific base for sure (my guess is Camp Merrill).

I have also had recent activity on 141.075. Sounds like it might be out of Anniston, AL and it could be a law enforcement repeater.

Also for the Chatt bunch - I am getting occasional activity on 150.075 repeater output and it sounds like a wildlife LE function. How about giving it a listen from time to time and see what you all hear over that way. Sounds like they are around Tellico. They are very active, but it is a definite r/out.

73 all and good hunting,

Larry Van Horn

I know that the TN Guard is working the event which is actually at the
Catoosa County Rifle Range. (Which of course is an Guard Camp.) Also of
interest should be 153.830 being used by Catoosa Fire and Rescue units, and
Hutcheson EMS and Angel EMS have transported several patients from the scene
and are being dispatched on 155.265.

Topic: 589 Message: 589

Quiet today in the military bands. Here is the little I intercepted.

148.650 Almost continuous packet burst noted here (probably US Army MARS).

170.100 Interesting data burst noted here. Not sure who we have, could be a fed agency.

262.450 Possible UFO milsat downlink noted here at 2035Z.

272.000 Unid aircraft at 1945Z talking to unheard ground station about a generator problem.

Have had a little activity on the Camp Merrill EDACS trunk system today. Just had the 407.250 (control channel for today) 407.375 and 407.575 MHz freqs pop. They are still using the "Brawley" CW ID set on the voice channels. BTW-Brawley is the mountaintop where the system is located. Still working to figure out all the freqs in this system. Also trying to figure out how 408.050 figures into the system. That one appears to be heard down ATL way from time to time.

73 all and good hunting,

Larry

I've seen this frequency used quite in the western US for Weather Data.
Not sure if they are all NWS, or if other agencies sponsor the equipment/
frequency.

Topic: 591 Message: 591

Here are some of the intercepts heard today in SW North Carolina.

141.550 Probably some Moody 68FS F-16 aircraft doing their air2air thing here (AM mode) this morning. Nothing heard overhead buzzing around here in the Snowbird Military Operating Area (MOA).

143.075 A totally bizarre data burst heard here that in the past has only been heard sporatically and briefly once in a great while (well here are the dates I have in my log: 1/25/99-5/11/99-7/27/99-9/21/99). I'm just not sure what I have here, but I know this is a US Army primary allocation and I have reports that this one is used in other parts of the country as an Army tank telecommand and control data channel. I wonder if they are using it for that down at Camp Merrill in association with the US Army Ranger training? Do the Army Rangers get to play with tanks? ;-)

148.125/143.750 (103.5 Hz) North Carolina Wing [Sylva, NC] Kitty Hawk units (NFM)

162.400 GA NOAA weather WXK52 Chatsworth (Peachtree City office) 200w output power

162.500 AL NOAA weather WFF44 Shelby County Airport (Alabaster/Ft. Payne/Henegar) (Birmingham office) 1000 w output power. Weaker than normal.

162.550 TN NOAA weather WXK48 Chattanooga/Signal Mountain (Morristown office)

162.7875 Had a weak repeater come up with a CW ID on this one mid-afternoon. Missed ID (caught my off guard on the telephone), but this is a Justice Dept, US Marshal service frequency which is widely used in the SE US. First time I have heard a CW ID here, so I might be getting some enhanced tropo reception this afternoon, but nothing unusual as far as NOAA weather radio reception goes. I use them as a beacon for tropo conditions.

167.2125 Another probable TN FBI repeater heard this a.m. Not sure whether this one is in Cleveland, Lookout Mountain, or ? (NFM)

167.3375 TN Chattanooga FBI repeater output with scrambled comms. This one and 167.3125/167.4875 are all tied together and often heard in the clear. Quite audible here in B-town. (NFM)

226.275 Unid aircraft air2air (AM mode). I know a unit down Tyndall AFB uses this one but not sure who was here this afternoon.

234.800 I am getting some interesting hits on this one. Not sure who it is, but I'm gonna watch it a bit as the signals appear to be in the FM mode.

238.650 I'm getting some weak comms on this one. I have it listed as a USAF ACC spare air refueling channel nationwide. Time will tell I guess. (AM mode)

295.800 Unid aircraft here on AR-633 refueling primary. (AM mode)

377.050 Numerous tranmissions simulcast VHF/UHF from Atalanta ARTCC Mt. Oglethorpe (QRP) Logen sector (49) paired with 121.350 MHz. Very busy today. (AM mode)

407.575 Mountain Ranger 10 talking to unid (talk group 15-141 per the BC-245) on the Camp Merrill EDACS TRS. (NFM) Other freqs active in group 407.375 and 407.250 (control channel).

411.275 GA USFS-Fixed link (Chattahoochee) Airnet Link to RO and Gainesville SO 168.625/415.275. Aircraft flying to Jackson asking Gainesville to relay to Atlanta info. (NFM)

417.775 NC TVA Hiwassee repeater output (input 411.775, control 40.62/40.74) Hiwassee control repeater to Murphy (crew headquarters), Cleveland area operations. Required for operation, control and maintenance of power line transmission facilities. Dispatcher=Chickamanga/Hiwassee Dispatch. (NFM)

Have a great day (what's left of it) all and good hunting,

From: Larry Van Horn
Topic: 592 Message: 592

Here are some of today's intercepts from Brasstown, NC/Grove Ent. Receiver is a Icom R-8500.

167.150 NC National Park Service Great Smokey Mountain repeater output (input 166.350)(173.8 tone-NFM) <channel 4>

168.300 Heard some fascinating comms on this one all day. Definitely one to put in your scanner if you live in the Tri-state area. (COR-NFM)

168.675 This one has been active with weak signals levels for a couple of days now. Not sure who I have, but this repeater output freq does have a courtesy tone after each unkey to help ID it. Im just on the fringe of reception here in B-town. Use to be part of the Cherokee NF system, but I believe that has now been replaced. (NFM)

169.9250 TN KID315 USFS Cherokee NF-Cleveland: Southern units repeater output (input 166.675)-Ocoee/Tellico areas (103.5 tone) Weather information/fire danger readings at 1400 daily.

171.025 NC NWS IFLOWS data link from Johanna Bald to the Cherokee Co, Clay Co, and Graham Co EOCs.

171.475 NC USFS Nantahala NF:Tusquittee repeater output <channel 2> (input 168.125) (103.5 tone-NFM) simplex <channel 1>-Nantahala to Cherokee NF link (input 172.225) Tusquittee/Asheville Dispatch here. Also a female dispatcher can be heard here at 10:00 a.m. weekday morning passing weather/fire danger info to Pisgah units.

417.825 TN TVA Oswald Dome repeater output (input 411.825, control 40.62/40.74) Oswald Dome control repeater to East Cleveland and Cleveland Power Service Center, Cleveland area operations. Required for operation, control and maintenance of power line transmission facilities. Dispatcher=Chickamanga Dispatch

The discovery of this one follows on the heels of the 417.775 repeater I mentioned the other day from Hiwassee, NC that is also dispatched from Chickamanga Dispatch. Wonder how many more TVA work crew dispatch repeaters I'll find on UHF? ;-)

Have a great day what's left of it and good hunting

593. Army and Air Force Reserves

Yahoo group: chattradio
Date: 1999-09-24 21:36:12 UTC
From: LFDGAJR@xxx.xxx
Topic: 593 Message: 593

Does anyone have or can point me to someone who has a listing of Army and Airforce Reserves and National Guard VHF and UHF frequencies? I am mainly interested in frequencies used in the Northwest Georgia area, but I will investigate any freqs and see if they are in use in my area.

Thanks for the help,
Christian KF4ZMB

594. new talkgroup

Yahoo group: chattradio
Date: 1999-09-25 11:14:13 UTC
From: John Pless
Topic: 594 Message: 594

That elusive talkgroup on chatt 800 system, 19600, has revealed its' true identity.
It appears to be sheriff's dept. westside dispatch (460.275 now) The dispatcher the other night had it keyed up everytime he transmitted on uhf channel. Don't know if he intentionaly had simulcast mode on. So as other users go, the rest of the sheriff's dept talkgroups should be around 19568 and up, spaced by a value of 32 (19568, 19600, 19632 etc)
More should become active when so goes 800.
Still wondering about 20752...anybody can help (I know someone who's on this list can!...ooops it's a secret!)

They could have been testing area-wide reception on 19600. Does the sheriff have the new consoles installed already?

Did you hear 20752 in a bad spot cause if scanner is not in a good spot and you're in search, it can trigger on erroneous id's because of bad control channel reception. When I get a "new" id, I usually press search twice to three times moving the scanner around to confirm it. 20000 seems extremely high considering that they still have a lot of openings between 16000 and 19000.

I talked with a new dispatcher where I work at and he is with Ham. Cty VFD, and he said that they will not go to 800 because the new radios would cost them around $2000 a piece and they just can't afford it with as many units as they have. Interesting though that his radio looked like a brand new VHF radio from Motorola. Unknown on model.

County does have new consoles....but I doubt they were testing for signal strength. The White Oak Mnt site still does NOT have it's antenas up for the 800 system, and none up yet for it's microwave links. But the equipment/building/tower is up there. It appears the dispatcher has activated his "patch."

This was a ligit talkgroup. It sounded like a console, with the background noise you hear in the 911 center. 20000 series talkgroups are indeed legit. In fact, you could see some even higher. Yes, there are plenty of "holes" in there. If you start a list, beginning with 16400, and go up a value of 32...say all the way through 20000...you'll see a pattern showing what agenencies are clustered where. Couple exceptions, like chatt fire. they're mixed in around stuff like carta. You will see some new talkgroups opening up between 19248 on up for county services. And county general govt is supposed to get their stuff on 800 too. MIght even see a couple city talkgroups pop up in the 19000 to 20000 range. But i do know what your talking about when it comes to listenign in fringe areas...erroneous tg's do pop up.

One of the chiefs of a county vfd is supposed to be setting up a countywide vhf repeater system for county vfd's/rescue. supposedly they are thinking about using the vhf-hi freqs now used for county roads/public works. we'll just have to see.

597. SW North Carolina 9/27/99 Intercepts

Yahoo group: chattradio
Date: 1999-09-27 20:55:04 UTC
From: Larry Van Horn
Topic: 597 Message: 597

Here is some of the intercepts from today's listening at the B-town office. Receiver Icom R-8500.

124.375 PAT 087 working ATL ARTCC (Foothills/Toccoa GA RCAG Sector 50 High Altitude)

140.400 Josa 951 calling Hurburt Command Post. No apparent answer. Believe that this an AFSOC CP freq at Hurburt. (AM mode) Nice catch here in the mountains many miles from Hurlburt Field.

141.850 USAF Thunderbirds flight demo team air2air up here chit chatting. One of them was really sucking down the O2 (much more than real men do who fly the Navy F/A-18s). ;-) Also talking about golf and the head honcho calling turns for the formation (AM mode). Doing weather updates and said they were heading toward Little Rock instead of Fort Smith do to wx cx. Passed freq change to 259.2 on their UHF.

163.200/162.7875 I've been getting several hits on this US Marshal combo this a.m. Not sure if it a Chattanooga or northern GA repeater I'm hearing.

168.3750 Probable TN KIN294 DOE Oak Ridge area safety and operations repeater output (input 169.975) - Oak Ridge [Melton Hill Repeater]. Can anyone up Knoxville way confirm the type of traffic they hear on this with me? I have been chasing this one way to long waiting for something concrete to hang me hat on and still only a tentative identification. The one thing I do notice is the tone burst with each key up which lead me to the tentative ID to begin with.

229.075 Oscar 66 (see 380.350) calling in to unid ACC ground station with maintenance status/arrival message (probably at Shaw AFB SC).

255.400 Unid here looking for weather at NKT. (FAA Flight Service Station nationwide). This is an excellent freq to keep in the scanner (AM mode). You'll hear a lot of traffic on it especially when bad weather is out and about.

295.800 AR-633 up with Soda aircraft, unknown who is on the receiving end.

344.600 Josa 75? callng Robins Metro. No apparent answer.

380.350 Oscar 66 requesting direct Shaw AFB at FL330 with Atlanta ARTCC (Foothills/Toccoa GA RCAG Sector 50 High Altitude)

it's going to be very interesting when all these services come online because as of right now only 11 tgs can talk at one time and almost all of them are going to be PDs especially during daytime, right now it's ok but when county pd comes online with their 3-4 tgs yikes. It's going to be like people waiting on a payphone in a busy airport with flight delays at Christmas time just to make a call.
Has anyone figured out what the data streams are on 856-858.9625 are or what they belong to? And is the phone patch 856-859.7625? Reason being is that i think there are only 12 freqs in the trunked rotation: 856-860.2125, 856-860.4625, 860.7625, and 860.9625 and i want to be sure that i'm not missing any freqs. In case ya'll was wondering, 859.9625 is SWAT 2

599. CH-47 Chinook

Yahoo group: chattradio
Date: 1999-09-29 03:08:57 UTC
From: LFDGAJR@xxx.xxx
Topic: 599 Message: 599

For anyone who is interested. A couple of days ago me and my sister spotted a CH-47 or aleast thats what it looked like to me. It was flying over the K-Mart area in La Fayette Georgia about 30 miles south of Chattanooga TN. Also there have been several HH-60 and UH-60 helicopters flying in the area of my house and other surronding areas of Walker County GA. I have been given a list of freqs used by HH-60 and UH-60 aircraft in this area, but I don't know where to look for CH-47 comms.

I am still without the ability to monitor UHF air frequencies hopefully that will change before October is over and I'll once again be able to monitor military air traffic. If you have any freqs either VHF or UHF used by CH-47s in this area please pass them to me I'll try to start monitoring them as soon as possible.

600. Shares Coordination Net (SCN)

Yahoo group: chattradio
Date: 1999-09-29 17:45:55 UTC
From: Larry Van Horn
Topic: 600 Message: 600

Howdy all,

One of the more interesting US Government/military nets that utilizes the HF spectrum is the Shares (Shared Resources) HF radio program. Quite a few interesting government agencies and military services are Shares participants. We have run numerous articles over the years on Shares when I wrote the Utility World column in Monitoring Times (and in December issue we will do a major update on freqs, etc in preparation for the Y2K event).

If you want to listen to Shares activity on a a regular basis and can be near a radio between 1600-1800Z on Wednesday, that is when the system is tested and a regular weekly Shares net is held.

Today at 1600Z, KGD34 was net control station (NCC Arlington, VA) for the weekly Shares net. They were working primarily on 14396.5 kHz (USB) <SCN channel 2>. While the entire Shares program has quite a few frequencies, you will find quite a bit of the activity on the following dedicated SCN (Shares Coordination Net) frequencies:

5236.0 Shares Coordination Network (Voice) <Channel 1>
14396.5 Shares Coordination Network (Voice) <Channel 2>
4490.0 Shares Coordination Network (ALE) <Channel 3>
5711.0 Shares Coordination Network (ALE) <Channel 4>
9106.0 Shares Coordination Network (ALE) <Channel 5>
11217.0 Shares Coordination Network (ALE) <Channel 6>
15094.0 Shares Coordination Network (ALE) <Channel 7>
17487.0 Shares Coordination Network (ALE/STI) <Channel 8>
6800.0 Shares Coordination Network (BBS) <Channel 9>
13242.0 Shares Coordination Network (BBS) <Channel 10>

These frequencies are the ones to watch during natural and man-made disasters given the nature of what Shares does. It's also ones to watch during U.S. Government Y2K testing and of course, the Y2K event itself at the end of the year.

Again if you want to learn more info on this system, including an extensive frequency list, then be sure to check out the December 1999 issue of Monitoring Times magazine.

Have fun out there and good hunting,

Larry Van Horn

Hello Christian and the group.

I think you are going to find it wasn't a fed packet signal uou were hearing on 149.945. First of all that is not a valid federal freq allocation. The 138-144 and 148-150.775 range is currently using 12.5 kHz spacing and very very few of the old wierd splinters are left after the US military mandated in 1986 that 25 kHz spacing would be the rule in these bands.

But what you did probably hear is even more exciting. You probably caught a Russian orbiting military navsat that is actually transmitting on 149.940 using 50 bd FSK.

The Russians actually have several navsat freq in this range.

Military Navsats: 149.910, 149.940, 149.970 and 150.030
Civilian Navsats: 150.000

These birds are very very audible on even the simplest of equipment and remember due to their orbiting characteristics, the downlink signal will exhibit doppler shift.

Anyway that my theory and I'm sticking to it.

73 all,

Larry Van Horn

603. Portable 31?

Yahoo group: chattradio
Date: 1999-09-30 19:51:23 UTC
From: LFDGAJR@xxx.xxx
Topic: 603 Message: 603

At 1935 UTC 29.660 Mhz was active in the Narrow FM mode with a male in english IDing as "Portable 31"(?) attempting to raise "Portable 32"(?). Several attempts were made apparently without any luck. I never heard anyone answer "Portable 31" and did not hear any further from him.

Does anyone know who this might be?

Hmmmm....

Just a guess, but sounds like some of our "Freebanding" Good Buddies
using all-mode "10 meter" radios. 29.660 is a coordinated Amateur 10 meter
repeater output.

29.600 is the standard simplex calling frequency for FM on 10 meters.

A run through any of the on-line "CB Shops" will produce a plethora of
sources offering "10 meter" radios and "11 meter export, all-mode" rigs. I
dare say that un-ID'd calls on that freq were bootlegged.

609. Bill Cheek Update

Yahoo group: chattradio
Date: 1999-10-01 19:22:51 UTC
From: Larry Van Horn
Topic: 609 Message: 609

An appeal to Monitoring Times readers and friends of Bill Cheek:

Bill Cheek, editor of the "Experimenters Workshop" column in Monitoring Times and author of a series of books on scanner modifications was just diagnosed with incurable lung cancer at the end of September. If treatment is not begun aggressively and rapidly, doctors give him about 3-4 months.

Bill says, "research on lung cancers is ever on-going ... My doctor said that even a year ago, my case would not have been treatable at all. Now they can offer me a 4-6 months extension." The problem is, Bill does not have medical insurance. He is self-employed at Comtronics and has two daughters in college. Furthermore, charges brought against him in a New York federal court last spring -- related to his scanner business -- are currently being heard before the Grand Jury.

Bill intends to fight the cancer, but he could use your help. Bill welcomes your prayers on behalf of him and his family. If you have knowledge or feedback on the latest cancer research and developments, Bill would appreciate hearing from you. Expressions of concern are welcome, but he'll have little energy for personal replies.

You can also help with your contributions. A trust fund has been set up by friends and family to which you may contribute toward medical expenses. Here are the details:

Contributions for Bill Cheek can be made through Union Bank of CA. Checks can be made out to either:
> Bill or Cindy Cheek
> Cynthia Cheek trustee for William D. Cheek, Sr.

Funds should be sent to:

Union Bank of California
Acct# 0771354719
8359 Mira Mesa Blvd
San Diego, CA 92126
Attn: Rhonda or Kevin Smith
(619) 230-3800

OR

Bill and Cindy Cheek
PO Box 262478
San Diego, CA 92196

Though always a controversial figure, there is no disputing the fact that Bill has devoted his life to the love of radio and technology. We at

Monitoring Times ask that you give this appeal the widest circulation among your radio friends. As fellow hobbyists, let's show our appreciation by giving generously.

610. SW North Carolina Intercepts 10/1/99

Yahoo group: chattradio
Date: 1999-10-01 20:40:09 UTC
From: Larry Van Horn
Topic: 610 Message: 610

A few intercepts today from my office listening post here in B-town.
Receiver Icom R-8500 and Icom R-75.

139.075 Quite a bit of activity on this one during the a.m.

148.150 GA CAP repeater output Cleveland. Discussion by a couple of member about a botched weekend activity due to member not being notified. One member highly upset and threatening to quit of the event doesn't go well. <Yawn>

163.4125 Finally seeing a little activity on this nationwide US Army Corp of Engineers freq. Not sure were it is coming from at this point, but at least I now know it isn't inactive here in this are

261.200 Possible USAF AWACS out and about the area right after the noon hour. Mac KF4LMT was also hearing signals down Savannah way later in afternoon. Coordinated listening on AIM/#monitor.

276.675 Caught a couple of AFRES or ANG pilots chit chatting about personal/squadron gossip. Over Knoxville heading to airshow. Probably F-15 Demo aircraft on their way to the show. You just never know when one of these unit/squadron/wing/CAG discretes are going to become active. So I keep them loaded in at least one of my scanners at all times. Same applies to AR primary/secodnary freqs outside my area. Those have come alive from time to time with interesting comms.

306.25 FAA AL Birmingham RCAG Atlanta ARTCC working various aircraft.

333.300 Caught a couple of unid pilots on this one shooting the breeze. Must be a good day to catch x-country flights. This is a commonly reported USAF air2air freq.

349.400 Unid aircraft checking in hear with an arrival message for gnd stn. Best bets here in the SE US is Little Rock or Charleston. I have a natural blockade to the NE-East-SE thanks to the mountains.

364.200 NORAD AICC freq up with activity (see AWACS log 261.2)

Good hunting all,

Larry Van Horn

612. Strange Transmission

Yahoo group: chattradio
Date: 1999-10-01 22:45:38 UTC
From: LFDGAJR@xxx.xxx
Topic: 612 Message: 612

On 143.475 MHz NFM around 18:20 EDT I heard some sort of digital transmission. It sounded sort of like HF-FAX. It was only there for a couple of seconds and then it was gone. I was searching in a 140-144 MHz range and after the scanner started to search again it picked up the same type of transmission on 143.040 MHz then gone. I broadened the search to include 137-144 but never heard anything like it on any other frequency. It was very strong here in Northwest Georgia. The only other transmission I received on any of these freqs was a very badly broken voice comm on 139.375 MHz NFM. The transmission was very broken and I couldn't understand what was being said then it faded out. Does anyone know what this might be?

616. New Product from Grove

Yahoo group: chattradio
Date: 1999-10-05 19:12:16 UTC
From: Larry Van Horn
Topic: 616 Message: 616

Get on the MT Express

Grove Enterprises, the publisher of Monitoring Times magazine is pleased to announce a new product -- MT Express.

You can now receive your subscription to Monitoring Times magazine in electronic form. No more delays due to mailing, no lost or torn copies.

For less than the cost of a subscription in the United States, you can be reading the entire Monitoring Times magazine anywhere in the world before U.S. subscribers receive their printed copies! MT Express is the exact same magazine that has gained a worldwide reputation for reliable radio information that's easy to understand, and products and projects of proven value.

For a mere $19.95 per year (U.S.) MT Express gives you Monitoring Times magazine

- in PDF format viewable with free software
- delivered by FTP (10MB file)
- viewable in brillant color on your computer screen
- easily navigated by clicking on the Table of Contents
- printable using your computer printer
- searchable to find every mention of a topic or station schedule
- importable into your frequency databases
- compatiable with software to convert test to audio for sight impaired listeners

To find out if this new subscription is the delivery solution for you, you may download the August issue for free. Just go to http://www.grove-ent.com to find out how.

One year subscription to MT Express is only $19.95 (U.S.), or for even greater savings, $11 in addition to your printed subscription of $23.95 in the U.S.

To order MT Express call toll-free (800) 438-8155 or e-mail: order@...

In addition, Grove Enterprises new Fall-Winter products catalog is also available on our website, free of charge, in PDF format for immediate download.

626. East Tennessee DOI/OSM Freqs

Yahoo group: chattradio
Date: 1999-10-07 19:40:01 UTC
From: Larry Van Horn
Topic: 626 Message: 626

I have discovered a new fed repeater system in the VHF hi-band today. It belongs to the Department of Interior/Office of Surface Mining. There two offices are located in Chattanooga (KOJ 912) and the one I hear here most frequently-Knoxville Base (KOJ 900).

168.500/166.800 (Link 411.850) Buffalo Mountain repeater
168.500/166.800 (173.8 Hz) Cross Mountain repeater
168.500/166.800 (203.5 Hz) Hinch Mountain repeater

Not sure at this point if the Buffalo Mtn repeater has a CTCSS tone by Cross and Hinch Mtn repeaters are indicated above. Likewise not sure if Cross and Hinch have UHF link tie-ins (I don't think they do that I have been able to find). Also I don't have any additional info if there is more to the system including simplex freqs. Anybody got anything else on this bunch?

Hope this helps someone out there with an unknown or two.

Have fun and good hunting,

Larry Van Horn

629. New Fed Freq

Yahoo group: chattradio
Date: 1999-10-08 18:03:40 UTC
From: Larry Van Horn
Topic: 629 Message: 629

Gee seems like with all the nice enhanced tropo we have been having lately, I keep getting new stuff popping up. So here is today's new mystery fed freq. Anyone else west of me hearing this?

163.5125 TN NOAA weather radio broadcast from Nashville-Tullahoma/McMinnville area. I only show this to be a USAF freq and Arnold AS does have an allocation here for a central paging system. Are they the ones rebroadcasting the NOAA broadcast for the base personnel?

Have a great day all,

Larry Van Horn

PS- Hello to John Pless. Yes John I did get your email and it was my pleasure meeting you last week. We must get together again and talk scanners. ;-)

But not on this freq 163.5125. This one is a DoD allocation, specifically to the US Air Force, Army, Coast Guard (Transportation Department) and US Navy. That is the reason why with an allocation on this freq for Arnold, it fits quite nicely with the NOAA weather radio being broadcast from the Tullahoma/McMinnville area.

635. M.A.T.S. is 10-7

Yahoo group: chattradio
Date: 1999-10-11 23:51:27 UTC
From: Michael Martin
Topic: 635 Message: 635

Folks:

This is the toughest thing I've done since uploading the Metro Atlanta Trunking Systems website.

M.A.T.S. is currently 10-7 (out of service) for approximately the next 24 hours while I take it down and start the PAINFUL process of uploading ScanAtlanta!

Please bear with me, I've been working on it for the last month and a half and I'm about worn out! My wife will be glad when it's finished so she can have me back, too!!!

Also, if anyone knows of anyone/any company that would like to be a sponsor to my site, please refer them to me.

My THANKS goes out to everyone who has submitted all the new data that is being included!

Again, thanks for your patience's, it will not go unrewarded.

636. NOAA Weather Radio Link/DOE Confirmed

Yahoo group: chattradio
Date: 1999-10-12 15:45:01 UTC
From: Larry Van Horn
Topic: 636 Message: 636

Well after some help from some great Chattradio members (thanks Dewey), I am able to confirm that 163.5125 is, in fact, coming from Arnold AS (AEDC-Arnold Engineering Development Center) as I suspected in my original post on this freq. This is the central base paging freq and they retransmit NOAA weather radio from Beech Grove, TN. It serves a dual purpose of providing the Base with early weather warning and as an indication of the range of the the pagers. So now we all know were this powerful transmitter is located.

On a new confirmed note, I have verified another DOE Oak Ridge repeater this morning.

164.350/164.775 booms in here (250 watts). Just minutes ago the repeater came up with a CW ID (KID 238) which crosses to this interesting system of multiple repeaters up there. Supposedly this is suppose to be a general security net repeater (audio is a little weak down here for that type of analysis).

As I understand the systems there are multiple fixed receive stations located at:

Multiple Repeater sites include: Buffalo Mountain and Chestnut Ridge.

So two more fed freqs bite the dust today.

Enjoy all and good hunting,

Larry Van Horn

637. 153.860?

Yahoo group: chattradio
Date: 1999-10-12 17:32:30 UTC
From: Larry Van Horn
Topic: 637 Message: 637

Here is another mystery for the list.

I'm getting a public works department repeater output here in B-town on 153.860. One of the divisions consistly mentioned on channel is "water construction." Current FCC info indicates no repeater outputs within the Quad-State (AL/GA/NC/TN) area.

The closest possiblity is a repeater input to 155.760 for the Monroe Co EMS folks. It is quite obvious from the traffic this is not an EMS dispatch and not a repeater input. I did hear one of the folks this morning talk about Sweetwater which, of course, is in Monroe Co.

Does anyone know if they have given this repeater in Monroe Co to the PW folks and possibly reversed the pair? Is the 155.760 Monroe r/out still active?

The only other Sweetwater I can find is in South Central Alabama and I don't think that one is my unknown.

Have fun out there and good hunting.

639. 153.860

Yahoo group: chattradio
Date: 1999-10-14 18:35:15 UTC
From: Larry Van Horn
Topic: 639 Message: 639

Well scratch my original post on this freq. 155.760 is in fact still active with the Monroe Co EMS dispatch (just monitored it). So it is back to the drawing board as to who I am hearing on 153.860 (that is the input to 155.760 Monroe Co). To refresh everyone memory I have a public works type department here all day long doing water system repairs etc. This is definitely a repeater output and based on FCC db info the only even close fit was if the Monroe EMS repeater had reversed it pair and give up its assignment.

Thanks to anyone who might have looked at this and now 153.860 goes back into the bin as a true mystery as to who is on this one. Guess it is time to look south or southwest in Georgia or Alabama.

73 and good hunting,

Larry Van Horn

I regularly hear this freq here just north of Chattanooga. The base
station often ID's as "OROC" for Oak Ridge Operations Center, I assume.
During the daytime I can hear all sorts of maintenance related activity;
after dark there are time checks between OROC and a varying number of
other units. A couple of years ago the base station would actually ID
as KID238.

642. TVA Low Band Active

Yahoo group: chattradio
Date: 1999-10-19 18:45:53 UTC
From: Larry Van Horn
Topic: 642 Message: 642

Ever since Gayle and I arrived here 6 years ago I have been told that the TVA no longer was using low-band for comms. Well that doesn't appear to be the case. 40.530 and 40.870 have been active with low power simplex ops all morning long from my B-town monitoring post. Also I have noticed what appears to be digital encryption (like that used by TVA security on VHF high band) on 38.980 40.490 40.620 MHz.

So if you live in western NC, the Tennessee Valley or northern Georgia, you might want to keep an eye out on the following freqs. Some of these could be used for contingency only and others, of course, will only be heard close range due to low power, simplex operation.

TVA VHF low band frequencies
Courtesy of Monitoring Times magazine

Construction 40.50 40.57 40.74 40.87
Law Enforcement (Security and Safety) 38.97 38.98
Low Power Simplex Operations 38.99 40.01 40.03 40.61 40.63 40.73 40.75 40.85 40.87
Operations/Maintenance 40.62/40.74
Transmission and Customer Service (TCS)/
Local Area Systems 40.53 40.65 40.69 40.77 40.83
Transmission and Customer Service (TCS)/
Wide Area Emergency Service 40.43 40.49 40.57 40.61 40.73 40.85

I will be doing a complete run down on the entire TVA system (VHF/UHF) and other freqs associated with the power grid in the December issue of Monitoring Times. This, of course, will be associated with the Y2k event.

Have fun and good hunting,

Larry Van Horn

From: Larry Van Horn
Topic: 643 Message: 643

Norman, one of our neighbors to the north in Canada, passed along the message below a couple of minutes ago asking "what is the TVA." For the folks that are outside of this part of the world, TVA stands for the Tennessee Valley Authority. It is the largest government owned utility in the United States based here in the eastern part of the country. TVA power travels across 17,000 miles of transmission lines. These lines carry power to customers in parts of seven states. They use a combination of hydroelectric, nuclear, and fossil fuel (oil/coal) plants to generate power for this part of the country.

You can read more about TVA at the follwoing website:

http://www.tva.gov or http://www.tva.com

10/21/1999
35.060 (1933) OM English dispatcher, another possible cabbie dispatcher.

35.160 (1934) GA KGZ493 Standard Telephone Company (IT) simplex - Young Harris (179.9 tone) CW ID on repeater.

35.340 (2109) High speed CW ID noted here. (Missed it cause I was on the phone, darn it! I don't like missing sure bets.) ;-(

35.800 (1957) English OM talking about bringing the truck into town for another.

35.880 (1930) YL English dispatcher, sounds like taxi service.

35.960 (2000) YL dispatcher passing time check (1300) so this was in the PDT zone.

35.980 (1939) English OMs talking about a construction project. Several signals here interferring with each other.

36.050 (2113)113 working unid talking about heat in a building, shutting thr water off and disabling the fire protection system. Probable DOE maintenance net in Nevada (NTS).

36.390 (2122) Nevada DOE public safety repeater output net stations here with NTS traffic. Parallel to 41.31 repeater input.

36.680 (1956) Pager data burst here.

37.120 (1953) Packet type data tone burst noted here.

37.260 (2106) Soft spoken YL LE dispatcher (might have been TN). Also 16 working unid Medical related conversation noted here by two YLs definite skip interfering with the above LE transmission.

37.440 (1919) Base to one (Gary) by English YL dispatch. Also talking to Dave. YL sending him to Territorial to Lorraine/Holly Creek Road she called it "creck." Mentioned CB3. Talking about a load. Also have Spanish OM dispatcher talking here underneath these folks. Strong signal.

37.660 (1951) English OM talking about the north end or south end of the job to another OM. Car 9 to Car 38 mentioned Westfield.

42.825 (1946) Spanish dispatcher with tone burst on keyups: weak

48.540 (2100) Gas company dispatcher.

Just a couple of notes to finish off the 10/21/1999 afternoon opening. I had a
few minutes after I got home before I had to run off to college to teach my genealogy class so I lit off the BC-895. The band was wide open to the San Francisco area. Was getting 42 MHz CHP dispatch comms (San Francisco area) at 2200Z. Also had an Department of Interior fishery comms on 30.040 probably from around Arcata based on the comms. There was a lot more around but no time, paper, or computer to get some more logs.

Last evening we had a very strong aurora event starting about 0100Z. Lots of aurora buzz on the bands when I came home from genealogy class. NOAA Poes aurora data indicated a peak in conditions around 0500Z (and the band was very very noisy with some FM broadcast skip being heard off the aurora curtain. For Ian the southern hemisphere peaked about 0400. I had some ps skip but due to severe interference, not much was logged.

10/22/1999 (am logs)

39.000 (1529) YL Spanish dispatcher asking questions about a pickup of material. Some interesting fading on this signal making me wonder about prop mode/path.

39.020 (1531) OM Spanish radio operators. Caught the last part of their transmissions so missed the jest of what they were talking about. Same unusual fading as 39.00.

39.560 (1440) Unid Spanish OMs with tone burst type keyups noted.

39.920 (1533) Another Spanish YL/OM net

42.370 (1516) YL Spanish dispatcher (very strong).

43.400 (1400) Unid agency English dispatchers

48.140 (1600) OM/YL talking about dumping a load of gravel and having an arguement. Women excused the man of being rude. Definite southern company based on accent but not heard here before on local scans. Very causal talk, no ID's first names, no other identifying characteristics.

48.480 (1333) GA KIA769 North Georgia Electric Membership Corp repeater output (input ?) - Dalton/Lafayette (Whitfield County)

These openings have been a lot of fun and are representative of the sun spot cycle F2 skip we can hear from these parts. We did have a solar storm overnight and I had aurora buzz on the FM broadcast band. The storm continues into today and I have noticed a definite effect on low band signals. The F2 should continue right on through the weekend so give the low band a try.

Have a great day and good hunting.

A few more low band intercepts from this afternoon. Things have quieted down somewhat I guess due to the magnetic storm conditions.

31.300 (1850) Tone burst noted here

32.400 (1725) Spanish OM dispatch service.

35.160 (2055) GA KGZ495 Standard Telephone Company (IT) simplex - Dahlonega Base working field units (new dispatch location for me here. Normally I here Young Harris)

35.550 (1955) Weak DTMF tones

38.860 (1718) Spanish OM, sounded like a dispatch service but weak with lots of fading.

42.420 (1901) TN Highway Patrol <channel 1> dispatch base to mobile (p/w 42.26/72.96 MHz) - Chattanooga (114.8 tone)

42.560 (1936) TN Highway Patrol <channel 3> dispatch base to mobile (mobile link on 72.3 MHz) - Knoxville (107.2 tone)

43.020 (1921) GA KTY738 Youngblood Trucking Read Mix Inc (IS) - Young Harris

Have a great weekend all,

648. Radio Hobby Web Site

Yahoo group: chattradio
Date: 1999-10-23 03:52:57 UTC
From: LFDGAJR@xxx.xxx
Topic: 648 Message: 648

I am in the process of changing my site from a Bookstore to a Radio Hobby Super Site. This change, I hope, will allow my site to better serve those interested in various aspects of the radio hobby. The site will contain information about Scanner, Shortwave, Amateur Radio for sure. I also wish for the page to contain information about Broadcast DXing (AM/FM) and Satellite Monitoring. Each of these will be broken down into smaller sub-categories such as frequency lists, modes, bands (ex. 2M, 10M, etc.), operating information, etc. The page will also contain a poll geared to the radio hobby which will change every week. Final results from the previous week's poll will be posted on the page as well.

I hope this site will be both useful and enjoyable. The URL is http://members.aol.com/LFDGAJR

Remeber I am still in the process of swiching the site over so the site only contains a minimal amount of information at the present, but I hope to be updating the site as frequently as possible.

Thanks for visiting and to all who participated in my CW poll final results are posted on the site.

Christian KF4ZMB

All Frequencies In Megahertz. All Received on an Uniden BC350A.

34.270 NFM - 2036 UTC - Picollo sound transmission. Almost like a digital burst that procedes voice comms, but no voice heard. Very strong levels.

35.100 NFM - 2037 UTC - Female dispatcher advsing 663 to be en route to 660's location. Other IDs heard: 105, 664, Sgt. Germain. Dispatcher heard only. Very strong levels.

35.680 NFM - 2035 UTC - Pager Transmission. Moderate levels.

35.980 NFM - 2035 UTC - Male operator advsing "10-4" no further heard. Strong levels.

39.020 NFM - 2010 UTC - Two-way comms in spanish between male and female. Moderate levels.

39.920 NFM - 2015 UTC - Male operator number station type format in spanish w/ 5, 9, 4, etc. Repeated numbers twice then out. This transmission was followed by two different male operators passing numbers between each other in spanish. Moderate to strong levels.

41.600 NFM - 2035 UTC - Pulsating digital signal. Very weak levels.

Unless I miss my guess, this is Sequatchie County's low band frequency.
You will also hear them on 151.625 if you are in the valley. Whoever does
thier radios for them put this in as a "talk-around" frequency.
Unfortunately, it is also used by hang gliding enthusiasts (legally) and
sometimes the unknowing dispatchers ry to run them off the frequency by
stating they (the pilots) are on a "police" frequency.

That WAS all the call!.....It's a "special event" callsign, good for a
specific event only and for a very limited duration (usually less than 30
days)

656. Brasstown NC

Yahoo group: chattradio
Date: 1999-10-28 21:25:29 UTC
From: Larry Van Horn
Topic: 656 Message: 656

Low band intercepts from 10/28/2999 using the Icom R-8500 and the local antenna system. Another nice opening into California again this afternoon and the Caribbean this a.m. A few more of these and I might get rid of a lot of my unknowns. ;-)

30.040 (2022) Definite Canadian traffic (love those accents) two OMs talking about the cold temps in the morning freezing stuff up.

30.180 (1905) Weak signal from Spanish OMs noted here

30.220 (1818) Spanish OM talking about the parking lot.

30.420 (1751) Digital burst pager system.

31.300 (1953) Digital burst pager system.

31.310 (1346) Unid Spanish OM in USB (weak). Not sure if this is a harmonic transmission or not.

32.660 (1752) Spanish OMs mentioned Columbia several times (signal in/out weak)

33.100 (2026) English YL talking about picking up JV team and cheerleaders for transport. School bus transport dispatch.

33.720 (1351) Spanish OMs chatting here with tone burst on transmission.

34.310 (2009) English OMs chatting here about the weather.

35.060 (1827) OM English dispatcher (simplex operation), "grumpy old man dispatcher" I have heard here in past days. This guy does have a tendency to get upset with the units he is dispatching, sorta funny to listen to when he gets junpy on one of the units for not doing what he wants. Easy to recognize this one in a crowd. This one appears to be in the Mendocino area (location passed during transmission) of CA. Based on traffic this is definitely a tow truck dispatch but definitely not Bell's Road Service in Lebec.

35.340 (1533) Voice paging system here (as usual) Still waiting to get a firm handle on this system. And at 1544 I got a high speed CW ID from KNKI943 which looks like the St. Croix system. But there definitely is more than one pager system here I am receiving, so the investigation goes on. Also heard women talking about going to St. Thomas (hummm) on one of the voice pages.

37.500 (1810) English OMs talking about lower line pressure after lunch and also mentioned channel 5.

37.660 (1832) Very sexy voiced YL English dispatcher talking to units about disconnects (utilities). Unmistakable if you hear her.

38.400 (1626) Powerful signal here with Spanish OM occasionally talking to others on freq - simplex operations. Signal sounds better in 8500 regular FM filter than the NFM filter, probably due to over deviation of the signal. This sounds like a cabbie type dispatcher based on traffic passed.

38.740 (1908) Spanish YL dispatcher (weak) but sounds like an echo chamber among others here.

39.140 (1858) A real mess here with several agencies on freq.

39.400 (2030) Sweeping tone with background microphonics, can hear keyups underneath signal and occasional voices in the background close to the dispatch position. Someone has the hammer down here. ;-)

39.600 (1848) California Highway Patrol (San Diego dispatch) repeater output (input 42.200) <gold> with LE traffic for SD area.

39.800 (1834) California Highway Patrol (San Diego dispatch) repeater output (input 42.840) <tan>, YL dispatcher (IDing as San Diego) telling person IDed by dispatcher as a citizen (high pitched female voice) on radio to back off mike, push button down and speak slowly. Then she declares frequency for emergency traffic only. Asking 92-5 Mary, 115-David-1 for status check. QRM abounds. Then she starts checking the status of several units: Other units 115-20, 115-30, 115-D-7, 115-51, 115-Mary-5, 92-Mary- 5, 92-Victor-1. Mentioned Escondido, San Diego, CalTrans, etc. One of the newer CHP repeater frequency assignments.

39.980 (1854) English YL dispatcher simplex operation, units also heard here talking to each other simplex. (B-town 10/28/1999)

41.900 (1516) Unid SS (OM) and English (YL) dispatch comms.

42.080 (1852) Probable California Highway Patrol dispatch simplex.

42.140 (1453) English OMs with some weird tones on signal. This was followed by what sounded like some sort of digital encrypted signals. Truly unique. If this is a state patrol dispatch does NY or ME have these kinds of transmissions. I doubt I was getting SC patrol. And that is pretty much who is here. At 1456 OM called ??? 120 so there is analog voice transmissions in here. I've also heard what sounds like a YL dispatcher (Sounded like she said Ponca City).

43.400 (1910) GA WPLR335 Tows Sewer Foster Construction dispatch simplex - Blue Ridge (Fannin Co.) mentioned Notley, a local landmark) talking about getting the plow that was broke.

45.660 (1934) English OMs "If your not 10-6 come on down where I am." Might be LE local comms either a repeater input or simplex.

46.560 (1743) English OMs talking about dumping hay in some women's yard.

47.740 (1559) GA KIA769 North Georgia Electric Coop dispatch simplex - Dalton with YL dispatcher IDing as "769" and talking about new construction and meters. Seems to be two different YL dispatchers here.

Have a great day and good hunting all,

Larry Van Horn

The City of Fort Collins has been identify as one of seven sites to test
the new National Weather Services frequencies devoted to retransmitting
the
EMWIN data stream at 9600 baud. They are 163.300 MHz, 163.325 MHz, and
163.350 MHz.

From my initial scanning, these frequencies appear to be not in use.

If anyone knows who may be using these frequencies, let me know. We need
to
know which frequency would work best in this area. The City of Fort
Collins
plans to set up a 100 Watt antenna in the next 4-6 weeks.

Kelly Dean
CSU/CIRA

P.S. More information about EMWIN can be found at:

http://www.cira.colostate.edu/special/EMWIN/default.htm

or

The City of Fort Collins has been identify as one of seven sites to test
the new National Weather Services frequencies devoted to retransmitting
the
EMWIN data stream at 9600 baud. They are 163.300 MHz, 163.325 MHz, and
163.350 MHz.

From my initial scanning, these frequencies appear to be not in use.

If anyone knows who may be using these frequencies, let me know. We need
to
know which frequency would work best in this area. The City of Fort
Collins
plans to set up a 100 Watt antenna in the next 4-6 weeks.

Kelly Dean
CSU/CIRA

P.S. More information about EMWIN can be found at:

http://www.cira.colostate.edu/special/EMWIN/default.htm

or

660. FM BCB E-Skip Opening

Yahoo group: chattradio
Date: 1999-11-09 19:50:01 UTC
From: Larry Van Horn
Topic: 660 Message: 660

1945 UTC: Looks like we have an E-skip opening this afternoon here on the east coast (North Carolina) that is into the FM broadcast band. It appears to be running into Mexico. More when I have more to report. Have Espanol on several of the lower 88-92 MHz channels.

Good hunting and 73

From: Larry Van Horn
Topic: 661 Message: 661

Howdy folks ,

I sure have Scott and I don't have a clue. I agree with you that it appears to come in when we have California skips present here on the east coast.

Here is what the FCC database shows for California on this freq.
CALIFORNIA, STATE OF KA4993 CA PP MO 100 00000039.40000000
MARIN, COUNTY OF KF9725 CA PP MO 00000039.40000000
CALIFORNIA, STATE OF KMF454 CA PP FBT 120 00000039.40000000
CALIFORNIA, STATE OF KMF454 CA PP FB2T 120 00000039.40000000
LOS ANGELES, COUNTY OF WNDA596 CA WHITTIER PP FB 100 00000039.40000000
CALIFORNIA, STATE OF WPGY499 CA SAN DIEGO PP FB 120 00000039.40000000
CALIFORNIA, STATE OF WPHM445 CA RAMONA PP FB 120 00000039.40000000
CALIFORNIA, STATE OF WPHM445 CA LA JOLLA PP FB 120 00000039.40000000

I know there is a CHP dispatch repeater on this one in the San Diego area that I have heard, but that is about it. Any of you CA folks on this list know what this is? And another thought for the list, maybe it is coming out of the Baja in Mexico. But I'm rambling again. Hope someone here can help Scott and me out on this one. Oh yea, one additional bit of info -- there is no PL tone on the signal, but then again I really wasn't expecting one given the wierd nature of this sweeping tone.

Have a great day all and good hunting.

662. Interesting radio check

Yahoo group: chattradio
Date: 1999-11-13 23:39:31 UTC
From: Matthew Sadler
Topic: 662 Message: 662

Heard an interesting radio check just a little bit ago on Hamilton County Sheriff channel 5 (460.100): KID835 Sequoyah Power called KNGJ618 and asked for a radio check, dispatcher acknowledged them, they IDed again and cleared the channel... interesting...

Larry, what frequencies do you show for KID835? I think it's a very safe assumption that KID835 is the TVA Sequoyah Nuclear Plant, but I did find it kinda interesting that they were calling on channel 5 and not channel 3, which is used by the units that patrol that area of the county.

Signal Mnt repeater (460.100) has better coverage of most Hamilton County. The 460.275 is on a ridge just east of Soddy, near High School. I've heard the check in's before. The Sequoyah security guards i've seen before had vhf portables. I'd bet it's encrypted! Channel 5 460.100 is also a less crowded channel, only used for civil process, taking 441's to moccasin bend, and access to the ONE patrol unit that covers unicorp areas around Walden.

Hummm, KID835 is the callsign assigned to Sequoyah security by the feds.
Their repeater is 163.375/171.3875. I show no other freq for this bunch.
Shame on the TVA. They did not coordinate this assignment with IRAC. ;-)

yep, the 245 is a great unit. i found it actually tracks both trunk and conventional freqs without the 5 second delay people have mentioned. try "ct morgan and associates" and of course grove. grove will save you tennessee tax...although you'll pay a few bucks for shipping. both offer the 245 at about the same price.

DAVID:

I keep bank 1 with Chatt trunked system in it. that fills up 18 channels designated as "trunk" channel. (even though chatt system has 20 licensed freqs...don't enter 858.9625 -sewer system data- or 856.9625/857.9625- the last two are data channels for encrypted data- those three channels do NOt rotate in trunk sequence)
that said, the remaining 12 channels in bank one go to vhf/uhf stuff. So when monitoring trunked "scan lists" it will pick up 800 talkgroups, and right away scan conventioanl stuff.
the only time i experience the 5 second delay is if i "trunk search" two systems. the trunk scan works better/faster.
i'd be more than happy to help you set up yours if you get one.
you'll find the 245 does all kind of stuff, and you'll be happy with it.
i'd recommend if your going to monitor vhf/uhf as well as 800, use another antenna. the stock rubber duckie works great on 800, but it's deaf on vhf hi band.

my last one was a pro90 i believe- the bc235xlt clone. it was alright except for the fact that it didn't have the "att" that the 235 did. so i'm going with the 245 for that reason. I will need it if/when I use a better antenna. I used a good one a couple of years ago and it overloaded the pro90 so bad it wasn't worth it.

Thats how i had my old one setup just for the fact of trying to keep all of hamilton cty stuff together close by then useing other banks for surrounding county stuff. Most of the time at work i trunk unless i hear pursuit leaving the city and you're right rubber duckie isn't good on vhf. From eastgate mall i barely heard Whitfield, Dade or Bradley. Never heard Polk, Marion, and any of the ctys in the area of marion cty, most likely due to terrain. But then again if i'm on top of lookout i would be able to pickup stuff as far away as Knoxville in that direction with a rubber duckie!
Any idea where i can get watson antennas locally on foot? check out link: http://www.durhamradio.ca/scanacc.htm#HSA Thanks in advance!

begun
> searching for this stuff today. More later as I get em !

The 164.9875 is not a USFS freq Clay, but used by the Army at Fort Benning/McPherson.

For the info of all hands we are effectively surrounded up here by fires. If you like smoke, now is the time to visit Grove. Bad part is I'm allergic to smoke so I'm in deep trouble.

Major and minor fires are raging in Chattahoochie, Ocoee, Cherokee, Nantahala, and Pisgah NF of GA, NC, and TN. So it is not just Northern Georgia folks.

Below is a cut from my freq list posted on the Grove website. More freqs are coming as we keep discovering new assets every few minutes. According to Asheville Dispatch/Air Tac Nantahala/Pisgah NF on 171.475 r/out we are getting some NIFC equipment and so new freqs using the NIFC band plan is probably forth coming. Here is my local list:

United States Forest Service
Chattahoochee NF, GA 168.625 Simplex AirNet Simplex
168.775 Simplex Fire Ground/Talkaround
168.775/168.175 Law Enforcement [Various]
411.225|415.225 LE UHF Link [Glassy Mtn-Chatsworth]

Bureau of Indian Affairs 164.625/165.3375 Fire Suppression [Barnett Knob/Cherokee, NC]

These folks are involved with sending human assets to the fires over here in this part of NC/GA/TN.

Also had 159.255 pop this afternoon. This could be one of the GA DOAS temporary repeaters they have for the forestry service that are setup when these things happen.

Topic: 680 Message: 680

Space Weather Notice

Official Space Weather Advisory issued by NOAA Space Environment Center
Boulder, Colorado, USA

SPACE WEATHER OUTLOOK #99- 31
1999 November 16 at 02:26 p.m. MST (1999 November 16 2126 UT)

**** SPACE WEATHER OUTLOOK ****

Summary For November 8-14
Two category R2 radio blackouts occurred on Nov. 14 due to large solar flares. Category R2 disturbances are associated with limited blackouts of high-frequency radio signals on the sunlit side of Earth for tens of minutes and also degrade low-frequency navigation signals for tens of minutes. A category G1 geomagnetic storm occurred during Nov. 8 - 12 due to a high-speed coronal hole wind stream. G1 storms routinely cause minor impacts on satellite operations and weak power grid fluctuations on electric utility systems. G1 storms also produce aurora displays as far south as 60 degrees latitude and begin to affect the biologic guidance systems of migratory animals.

Outlook For November 17-23
There will be a good chance for one or more category R2 radio blackouts during the week with systems effects similar to those mentioned above. There will also be a fair chance for a category S1 solar radiation storm. S1 storms normally cause minor impacts on high-frequency radio communications in the polar regions.

Data used to provide space weather services are contributed by NOAA, USAF, NASA, NSF, USGS, the International Space Environment Services and other observatories, universities, and institutions. More information is available at SEC's Web site http://sec.noaa.gov or (303) 497-5127. The NOAA Public Affairs contact is Barbara McGehan at bmcgehan@... or (303) 497-6286.

Philip:
First, while unit is in conventional mode, press the trunk key and hold it down, until you hear two beeps. Now it's in trunking mode. You have to be in this mode while entering freqs!!!
Begin with channel 1, enter the freqs. There are 20 licensed freqs for Chatt/Hamco...BUT... only enter 17 of them. 856.9625/857.9625 and 858.9625 are used to transmit data..they do not rotate in trunking sequence.. the data relates to sewer pump stations, and other "things."
Enter these: 860.2125/859.2125/858.2125/857.2125/856.2125
860.4625/859.4625/858.4625/857.4625/856.4625
860.7625/859.7625/858.7625/857.7625/856.7625
860.9625/859.9625
These 17 freqs are for trunking system.
NOW... go OUT of trunking mode, press TRUNK. Now your in conventional mode.
Enter these freqs AGAIN conventionally: 859.7625/858.7625/857.7625
(these are telephone interconnects, and by entering them as conventional, you'll pick up interconnects that you won't hear in trunking mode)
ALSO, enter AGAIN 859.9625 conventional. It's simplex used for special ops pd etc)
Some other "conventional" freqs I keep in bank 1: (your choice here)
854.9875 Signal Mountain PD
460.050 HamCo Sheriff Eastside
460.275 HamCo Sheriff Westside
460.100 HamCo Sheriff CH. 5
154.160 HamCo EOC (volunteer fd's/rescue squads)
155.295 HamCo Rescue
154.445 Walden Ridge Fire
154.355 Tri-Com FD
154.310 East Ridge FD
154.325 Red Bank FD

NEXT...HIT TRUNK KEY! IT WILL TRUNK SEARCH/SCAN, AND KEEP WATCH ON CONVENTIONAL STUFF. YOU'LL GET TRUNKIGN STUFF, HEAR ANY TELEPHONE INTERCONNECTS, HEAR 800 SIMPLEX AND WHATEVER ELSE.
Hope this helps...but shout if you need more help

688. Talkgroups and info

Date: 1999-11-22 17:03:04 UTC
From: David
Topic: 688 Message: 688

First, is there a Chattanooga FD Fireground 3 supposedly 17264? I saw this on a website and also on this site it stated that 17552 was Hamilton County Emergency Management-is that true also?
Heard this weekend 19568 which was Hamilton County's 460.050.
Second, here some info to use if you want to save some scan list space on Pro-90s and bc235xlts:
FYI -when switching to e1 use "usr" and set all blocks to S-1and the below DOES work!!!
Hopes this helps someone!!!

From: "Parlini, Flash" <Flash.Parlini@...>
To: "'trunkcom@...'" <trunkcom@...>
Subject: [TRUNKCOM] Using "Size Code" S1 to ignore status bits
Date sent: Mon, 16 Mar1998 16:31:45 -0800
Use "Size Code" S1 to ignore the status bits.

I saw some postings about using "S6" for this, but I think this is a better way.

If you take the decimal (Type II) Trunk Tracker ID and convert to binary, there are sixteen bits. The last (least significant)four bits are unnecessarily used by the Trunk Tracker in differentiating talk groups, to the great consternation of most of us. Old news, but here's how to bypass them properly:

(I apologize if this gets too deep)

We want to break up (parse) the sixteen bits in a different manner so that TT will ignore the last four. Look at a Type I system: it has Block, Fleet, Subfleet, and Unit ID. The TT only scans by Block, Fleet and Subfleet -- the Unit ID is ignored. So we want to set up a system where the last four bits are defined as Unit ID. Four bits is sixteen IDs, which is a "Size S-1" in Uniden terms.

In the S-1 parsing, the first three bits are the Block, the next seven are the Fleet, the next two the Subfleet, and the last four are Unit ID. The "Fleets" and "Subfleets" will have no bearing on the actual using agencies, like they would on a real Type I system, they're just arbitrary numbers that we can use in programming.

Note that Uniden claims S-1 has 128 Fleets, but their operating guide only shows two digits for displaying the Fleet. The radio actually displays and uses three-digit Fleets just fine, from 000-0 up to 7127-3.

The following pseudo-code can be used to convert from decimal (Type II) IDs to S-1 values. The vertical bar character (|) indicates cocatenation. The "if then else" construction is used to insert a leading zero for Fleet values below ten, to match the TT display.

if (int(mod([TalkGrpID],8192)/64)>9)

then

str(int([TalkGrpID]/8192)) | str(int(mod([TalkGrpID],8192)/64))

|"-"|str(int(mod(([TalkGrpID]/16), 4)))

else

str(int([TalkGrpID]/8192)) |"0"| str(int(mod([TalkGrpID],8192)/64))

|"-"|str(int(mod(([TalkGrpID]/16), 4)))

There is, of course, a catch: you have to reprogram the scanner. For whatever reason, when you load a Type I identifier into the 235, it stores it with the "ignored" bits set to "1111". In other words, you could load all 16 variations of your talk group into memory in "E2" mode, but only one of those would work when you changed to "E1/S1".

If you have the Type II value in memory, and change the setup from "E2" to "E1", you'll see the correct Type I ident, but it won't work. If you enter the same Type I ident in the next slot, then change the scanner back to "E2", the second channel will be 15 (decimal) higher than the original.

To work around this, you can either add 15 to all your Type II idents ahead of time, or just change to "E1", then go through every channel and re-enter the Type I value exactly as it appears.

Good luck,

689. Neat site for finding tower information

Yahoo group: chattradio
Date: 1999-11-23 23:37:55 UTC
From: Jim Knight
Topic: 689 Message: 689

I got this link from the trunkcom list server:
http://www.berkana.com/tower.php3
You can look up by city/state or company name. A search for chattanooga
produced 67 matches. These seem to be the tallest towers that would
require FAA as well as FCC registration. Each match also includes a
small map from tiger.census.gov.

690. Bamk Robbery Suspect Caught

Yahoo group: chattradio

692. Chatt Freq Database?

Yahoo group: chattradio
Date: 1999-11-28 15:00:52 UTC
From: Sam Hall
Topic: 692 Message: 692

Perhaps a silly question, but here goes...

Is anyone entering all these frequencies into a database on a web page somewhere (specifically for the Chattanooga area)?
The http://www.qsl.net/kf4lhp/ page content indicates most content was last updated 7/30/98, but seems to have lots of good information. I have an AR-8000 that needs some frequency updating!

Thanks all...

Sorry, but i didn't know that the airport had city pd programmed in their radios. I still haven't confirmed that East Ridge has Charlie Disp. programmed in in theirs.
I've heard several pursuits in the past involving E.R. and Chattanooga (and Red Bank for that matter) and they won't even switch to mutual aid. They are still going through their respective dispatchers which is slow at best at communicating ever-changing vital info.
I've been noticing some problems with the TRS: whenever the dispatchers put out the alert tone for a 422, BOLOs, etc.., most of the officers and me of course are not hearing the voice part. Whats strange though is that some are hearing it and some are not, even on the same team! I believe that they are using the "patch" status bit but it 'don't seem' to work?!?! It's been happening a lot lately. Any clues anybody?

If you want to: also add 462.550 Hamilton County Sheriff's "Collegedale Frequency" (thats what they called it) and 155.940 Hamilton County EMS Main and 155.220 EMS CH#2 and 460.400 old Mutual Aid (they still simulcast hot calls on it; THP and County still have it). 460.125 is Hamilton County Jail if you are interested. Soddy-Daisy Fire is 154.415

Is there an actual Collegedale PD and if so what's the frequency? I was told by someone who lives out that way that there is a PD there and he said that he has seen the cars and they were not Hamilton County Deputy cars. Does Walden's Ridge have a PD or is Signal Mtn PD covering it?
Is Soddy-Daisy PD still 460.250? I haven't heard anything on it in a long time.

Thanks in advance for any answers to the questions above!

Yep, Walden has it's own PD...although only a couple officers. There are times when Walden doesn't have anyone on the street, so HamCo has to pick up their calls. Signal Mnt Pd also backs up.
And yes, Soddy is still on 460.250. It's usually slow that way, so that's why you don't hear much. Soddy, Walden will go to the 800 system when the sheriff's office does...sometime late winter/early spring. A fouth 800 trunking site is going up to compliment the other 3 now on line.
Collegedale is still undecided about going 800. The system works well in most areas...suprisingly great in deeper areas behind Apsion... but a couple dead spots in Collegdale exist. The fourth site may help that...if not, there may be a "conventional" non trunked repeater site going up in Collegedale.

About Collegedale PD do you know their frequency? is it 462.550?
BTW do you know anything about a very bright flash of light in the downtown area around 0520 today? It looked like early dawn for a sec there! The only thing I heard on scanner was that Signal Mtn PD was wondering what it was, nothing else. I was on east side of Miss. Ridge when I saw it over the ridge.

Interesting note from the ARRL. So, how will this effect so many fire/rescue volunteers who buy modified ham radio equipment? I know in Hamilton County, lots of volunteers use yeasu/icom equipment on public safety frequencies. How will the fcc enforce this?

---

* FCC warns against nonamateur use of modified gear: The FCC has told the ARRL that police, public safety agencies, and others may not legally use equipment--such as modified Amateur Radio gear--that has not been FCC certified to transmit in services requiring FCC-certified equipment. The use of a modified Amateur Radio transceiver on police frequencies would be contrary to Part 90 of the rules because the equipment would not be FCC certified, an FCC official explained. In 1996, the FCC reminded manufacturers and users that transmitters intended for operation on frequencies allocated to any FCC-authorized radio service except the Amateur Service must be type-accepted (now called FCC certified) for the particular radio service prior to marketing and use. The use of such equipment could subject the licensee and user to penalties and forfeitures, as appropriate. The FCC said anyone selling such equipment also risks FCC sanctions.

I know of at least 3 volunteer firefighters in the La Fayette area who use
modified Yaeusu FT-209R radios. (I have an unmodified version I use for 2M
work.) The problem is, though some volunteer firefighters are paid per call,
where I volunteer I receive no pay per call and volunteer for the sake of
helping. These older modified amateur radios are cheaper to obtain, for the
most part, than new or even used commercial radios. So unless retailers and
manufactures start giving away these radios designed for public safety use or
drastically drop the price for volunteers there will still be a large number
of modified amateur radios being used in public safety settings. Making this
very hard to enforce for the FCC, or at the least counterproductive since if
you remove these modified radios then you may take away the only means of
communications for many public safety workers. And, this goes without
saying, a lack of communications in a public safety enviroment can be
devastating. One more thing a firefighter that I know was trying to deside
on which radio to buy one place offered him a modified used amateur radio
for $50 another place offer him a used "public safety" radio (with all the
same features of the amateur unit) for $250 including his firefighter
discount. Can you guess which one he bought?

It is very possible this is for the conventioanl repeater link into the trunking system, to be used in Collegedale. There are some dead spots out there, and emergency services has been planning on adding a repeater to fill in those spots.
But then again... it cuold be for something at the 911 center...although the trunking system does very well inside there.

Turned on my fire department pager this morning and heard something very strange I heard a unit IDing as Rescue 13 advsing that they were en route. This was strange b/c I am a firefighter on Station 13 and 1) we don't have a truck which IDs as Rescue 13 and 2) my pager hadn't gone off for a call. I continued to listen and heard several other units that we don't have in our county fire department handling different types of duties and using codes that we don't use (we are essential a plain english department). I decided to see if I could also receive these transmission on my scanner and I could. The transmissions faid from very weak to moderate and I believe that they are from a department in Georgia appear to be from a paid department however I'm not exactly sure. The frequency is 154.175 MHz.

Thought I would pass this log along to the lists. If anyone can ID this transmission I would be interested in that information.

on the chatt/hamco system, 21712 has been busy at night with traffic. seems their trying out portables. heard units in middle valley, toward soddy daisy, one guy in birchwood, another in apison. i can only suspect this is a sheriff's dept talkgroup. one time one unit used encryption, other unit was in clear, but told the encrypted guy he sounded bad.
seems to indicate the 3 site system does well east of river, well into collegdale/apison, but still dead spots on west side of river toward soddy etc...but then again... the 4th site should fix that!

While surfing around on a new Radio Shack DX-399, a small short wave digital reciever (that was
a holiday present to myself), I ran across WGTG near Copperhill, TN on 9.400 Mhz during the day.

The announcer, Dave Frantz, made reference to the Chattanooga Times newpaper and that he is a ham op
(WA4SZE) during his talk show.

They have a web site http://www.wgtg.org and from that site appears to be quite active on the air.

For Y2K, etc. he announced that WGTG is going solar power soon in case of main grid outage

Jim,

You may be able to hear the Big Shanty Repeater 146.655- on Sweat Mtn. near Atlanta. The Big Shanty Repeater Group has been providing a retransmission of space shuttle missions since 1990. I can receive the signal on my beam antenna and while mobile on the dual band larson in the Chattanooga area.

Occasionally, Bob Jordan, KN4VY, will link into the Big Shanty Repeater and carry a simulcast on 442.075+ in Dayton, TN.

For more information about the BSRG shuttle retransmission, visit their webpage at http://www.bsrg.org/shuttle.html .

From: Marcelrf <Marcelrf@...>
Subject: FEDS RAID ELECTRONIC HOBBY VENDORS

FYI-

http://www.ramseyelectronics.com/scstore/sitepages/hobby/fedpage2.htm

FEDS RAID ELECTRONIC HOBBY VENDORS

12/18/99

Several small
electronic hobbyist vendors were recently
raided by federal agents brandishing
semiautomatic weapons. News of these raids
has been kept out of the media and many of
those involved fear retribution if they
openly discuss the case. Until now, these
companies had operated for years selling
harmless educational electronic kits (like
wireless microphones) to students,
hobbyists, ham radio operators, and
hackers. Now their inventories are being
seized at gunpoint--and their owners could
be facing bankruptcy and prison time.

The U.S. Dept. of Justice is apparently
re-interpreting federal wiretapping and
smuggling laws to include small hobby radio
transmitters. Even possessing so-called
"Mr. Microphone" type toys can now put
hobbyists at risk of looking down the
barrel of a federal agent's loaded gun, a
felony conviction, federal prison time,
loss of property, and legal fees into the
tens of thousands of dollars.

Ramsey Electronics and Super Circuits are
just two of the companies recently raided
at gunpoint. Both have good and
longstanding reputations for selling
inexpensive, quality educational kits and
components to electronics hobbyists for
many years through ads in electronic hobby
magazines and their websites.

A high-ranking Justice Dept. official told one of the business owners the orders for these raids are politically motivated and originated from a very high level in the Clinton administration as a result of the Linda Tripp wiretapping case. "They just need convictions," the official said.

Earlier this year the Justice Dept. indicted Bill Cheek, the well-known and loved author of books on radio scanner modifications and Monitoring Times column writer. Bill was selling very simple "data-slicer" circuits (made from parts available at any Radio Shack) that could be used with a PC and a scanner to monitor radio data transmissions--including unencrypted police mobile data terminal (MDT) transmissions. Even after Bill had been diagnosed with terminal cancer, the Federal government refused to back off, even issuing a summons to court on the same day he was to begin chemotherapy.

In 1995 2600's BernieS was locked up in five different maximum-security prisons over 14 months by the Secret Service for possessing his laptop computer, his software, and ordinary electronic parts available at Radio Shack. He had been distributing parts, software, books, and pamphlets about cellular and coin telephones. The Justice Department's final investigation report stated "There were no victims in the offense."

This is a clear pattern of harassment and abuse of power by our Federal government against people teaching others about electronic communications. It appears our government doesn't want people to know this information. 2600 strongly feels this knowledge is important for people to have, and will continue spreading it at every opportunity. Write and call your legislators to complain about this injustice. You could be next

723. Three License Classes, One Code Speed

Yahoo group: chattradio
Date: 1999-12-31 00:35:58 UTC
From: Dewey Bryant KD4EHC
Topic: 723 Message: 723

Amateur Restructuring is Here:
Three License Classes, One Code Speed

de n1rl@...

NEWINGTON, CT, Dec 30, 1999 --
Amateur Radio will get a new look in the new millennium.
The FCC today issued its long-awaited Report and Order in the
` 1998 Biennial Regulatory Review of Part 97 --
more commonly known as "license restructuring."
The bottom line is that starting April 15, 2000,
there will be three license classes --
Technician, General, and Amateur Extra --
and a single Morse code requirement--5 WPM.

"We believe that an individual's ability to demonstrate
increased Morse code proficiency is not
necessarily indicative of that individual's ability to
contribute to the advancement of the radio art," the FCC said.

Besides drastically streamlining the Amateur Radio licensing
process, the FCC said its actions would
"eliminate unnecessary requirements that may discourage or
limit individuals from becoming trained operators, technicians,
and electronic experts."

Although no new Novice and Advanced licenses will be
issued after the effective date of the Report and Order,
the FCC does not plan to automatically upgrade any
existing license privileges.
The ARRL had proposed a one-time across-the-board
upgrading of current Novice and Tech Plus licensees to
General class, but the FCC declined to adopt the idea.
This means that current licensees will retain their
current operating privileges, including access to various
modes and subbands, and will be able to renew
their licenses indefinitely.

Starting April 15, 2000, individuals who qualified for the
Technician class license prior to March 21, 1987,
will be able to upgrade to General class by providing
documentary proof to a Volunteer Examiner
Coordinator, paying an application fee,
and completing FCC Form 605.

The FCC's decision not to automatically upgrade Novice and
Tech Plus licensees means the current Novice/Tech Plus HF
subbands will remain and not be "refarmed" to higher class
licensees as the ARRL had proposed.
The FCC said it did not refarm these subbands because there
was "no consensus" within the amateur community
as to what to do with them.

As it had proposed earlier, the FCC decided to lump
Technician and Tech Plus licensees into a single
licensee database, all designated as "Technician" licensees.
Those who can document having passed
the 5 WPM Morse code examination will continue to have the
current Tech Plus HF privileges.
"If documentation is needed to verify whether a licensee has

passed a telegraphy examination, we may request the
documentation from that licensee or the VECs," the FCC said.

In addition to reducing the number of license classes from
six to three and eliminating the 20 and 13 WPM code tests,
the FCC also will reduce the number of written examination
elements from five to three, authorize Advanced Class hams
to prepare and administer General class examinations, and
eliminate Radio Amateur Civil Emergency Service (RACES)
station licenses. RACES will remain,however.
"After review of the record, we conclude that we should
eliminate RACES station licenses because RACES station
licenses are unnecessary for amateur stations and
amateur service licenses to provide emergency
communications"

Under the new licensing scheme, there will be four examination elements.
Element 1 will be the 5 WPM Morse code exam.
Element 2 will be a 35-question written test to obtain a Technician license
Element 3 will be a 35-question written test to obtain a General license
Element 4 will be a 50-question written test for the Amateur Extra license.
The FCC has left it in the hands of the National Conference of VECs
Question Pool Committee to determine the specific mix and makeup
of written examination questions. Current Amateur Radio study materials
remain valid at least until the new rules become effective in April.

The FCC's new licensing plan means someone will be able to become
a ham by passing a single 35-question written examination.
The plan also simplifies and shortens the upgrade path from the
ground floor through Amateur Extra--especially since amateurs
will only have to pass one Morse code test.

Elimination of the 13 and 20 WPM Morse requirements also
means an end to physician certification waivers for applicants
claiming an inability to pass the Morse code examination due
to physical handicap.

The effective date provides a window of upgrade opportunity
for current Advanced licensees.
Between now and April 15, current Advanced holders may take
the existing Element 4B, a 40-question test, giving them credit
for having passed the current Extra written examination.
Likewise, holders of a Certificate of Successful Completion
of Examination (CSCE) for Elements 3B or 4B dated on or after
April 17, 1999, will be able to qualify for General or Amateur Extra
respectively when the new rules go into effect on April 15, 2000.

The FCC disagreed with the League's suggestion that it undertake a
restructuring of operating privileges along with licensing
restructuring.
"We believe that in light of ongoing discussions concerning
implementation of new and more modern communications
technologies within the amateur service community,
we should accord the amateur service community an opportunity
to complete such discussions and possibly reach a consensus
regarding implementation of new technologies before we undertake
a comprehensive restructuring of the amateur service operating
privileges
and frequencies," the FCC said in its Report and Order.

In its amendments to Part 97, the FCC's Report and Order
refers to a "Club Station Call Sign Administrator,"
something that does not exist under the current rules and
which was not explained in the R&O itself.
An FCC spokesperson said the Commission plans to issue a
Public Notice soon to explain the program and to solicit qualified
entities to serve as call sign administrators for club station
applications.

A copy of the entire Report and Order (FCC 99-412) is
available from the FCC Web site in plain text.

724. Y2K listening...

Yahoo group: chattradio
Date: 1999-12-31 21:56:48 UTC
From: Matthew Sadler
Topic: 724 Message: 724

Hi all, here's some frequencies to keep an ear on during Y2K...

TVA: Oswald Dome repeater (Benton/Polk County) 417.825, 192.8 Hz. From my listening to this repeater over the past few days, this system appears to work like a telephone, one of the numbers discussed was something like 133-2925, and the way they were talking was that the 133 was the repeater number and 2925 was the station number. I've also heard comms on 416.425, but never got a PL and don't know where this machine is at.

Hamilton County ARES: 146.610 primary, 145.290 secondary, 146.520 if all else fails

Hamilton County RACES: will be on 145.390, 224.780, and 444.100

Keep an ear on some other stuff too, like the city/county trunked system, utilities (EPB comes to mind), and EOC channel and some of the other VHF channels. That's just for Hamilton County, mainly because there's so much stuff out there for Hamilton County in particular, and other counties should be easier to listen in on with less frequencies to be in use.

new Bearcat 780XLT Base/mobile scanner.

Designed for the professional scanner user or scanner buff,
the BC780XLT has the following features:

500 Channels, 10 Banks, 25 MHz.-1300 MHz - excluding US cellular
frequencies. Allows you to program your favorite frequencies into
banks and
channels. Also includes continuous band coverage.

Trunktracker III - Coverage of Motorola, Ericsson, and now EF
Johnson
LTR trunking systems.

Alpha Numeric LCD Display - Enables the user to label both bank and

channels with alpha text in addition to accessing the software menu
system.

CTCSS/DCS - Allows the user to lockout, assign and scan for CTCSS
and
DCS tone codes.

S.A.M.E. Weather (Specific Area Message Encoding) - Can be
programmed to receive special localized weather warnings broadcast
by
NOAA. Specific Area Message Encoding (S.A.M.E.) weather alert.
S.A.M.E.
is NOAA?s coded emergency weather signals that identify a specific
geographic
area affected by an emergency. In weather alert with S.A.M.E. mode,
your
scanner functions as a county specific severe weather warning
radio. To obtain
further information about S.A.M.E. and FIPS code, visit
http://www.nws.noaa.gov/nwr/index.html. The BC780XLT can decode the

6-digit Federal Information Processing System (FIPS) code
established by the
National Weather Service (NWS). This FIPS code identifies
geographic areas
in the United States, US territories and US possessions.
Programming the FIPS
code is necessary to receive S.A.M.E. alerts about weather
occurring in a
particular area. To obtain a FIPS code for your area, call the
National Weather

Service toll free at 1-888-697-7263 or visit
http://www.nws.noaa.gov/nwr/indexnw.htm#sametable.

PC Control - With software sold separately, the user can have their computer
control various functions of the Bearcat 780XLT.

Clone Mode - Enables one radio to be linked to another so all of the
programming information may be copied with ease.

Smart Scan - This feature will allow for remote dial up of the Uniden server
through a 900 telephone number which contains a database of frequencies
customized for your specific US zip code.

10 Preprogrammed Service Searches - Included are Public Safety, Marine,
Air, Railroad, News, TV Audio, Family Radio Service, CB Radio, Ham Radio
and Special radio services.

10 Priority Channels - One for each of the 10 banks, that will be monitored
every two seconds for a transmission.

Record Out Jack - Enables the user to attach an external recording device to
record transmissions on a given channels or in a search range.

Jim,

When we finish building the doppler radar, then it will be available online at the NewsChannel 9 webpage at http://www.newschannel9.com . The doppler's antenna and tower is under construction here in Hamilton County. It will be a great asset for the area. I can't wait!

Amateur Restructuring is Here: Three License Classes, One Code Speed
de : n1rl@...
Copyright ? 2000, American Radio Relay League, Inc

http://www2.arrl.org/news/restructuring/index.html

NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new millennium. The FCC today issued its long-awaited Report and Order in the 1998 Biennial Regulatory Review of Part 97--more commonly known as "license restructuring." The bottom line is that starting April 15, 2000, there will be three license classes--Technician, General, and Amateur Extra--and a single Morse code requirement--5 WPM.

"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Besides drastically streamlining the Amateur Radio licensing process, the FCC said its actions would "eliminate unnecessary requirements that may discourage or limit individuals from becoming trained operators, technicians, and electronic experts."

Although no new Novice and Advanced licenses will be issued after the effective date of the Report and Order, the FCC does not plan to automatically upgrade any existing license privileges. The ARRL had proposed a one-time across-the-board upgrading of current Novice and Tech Plus licensees to General class, but the FCC declined to adopt the idea. This means that current licensees will retain their current operating privileges, including access to various modes and subbands, and will be able to renew their licenses indefinitely.

Starting April 15, 2000, individuals who qualified for the Technician class license prior to March 21, 1987, will be able to upgrade to General class by providing documentary proof to a Volunteer Examiner Coordinator, paying an application fee, and completing FCC Form 605.

The FCC's decision not to automatically upgrade Novice and Tech Plus licensees means the current Novice/Tech Plus HF subbands will remain and not be "refarmed" to higher class licensees as the ARRL had proposed. The FCC said it did not refarm

these subbands because there was "no consensus" within the amateur community as to what to do with them.

As it had proposed earlier, the FCC decided to lump Technician and Tech Plus licensees into a single licensee database, all designated as "Technician" licensees. Those who can document having passed the 5 WPM Morse code examination will continue to have the current Tech Plus HF privileges. "If documentation is needed to verify whether a licensee has passed a telegraphy examination, we may request the documentation from that licensee or the VECs,"

the FCC said.

In addition to reducing the number of license classes from six to three and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the number of written examination elements from five to three, authorize Advanced Class hams to prepare and administer General class examinations, and eliminate Radio Amateur Civil Emergency Service (RACES) station licenses. RACES will remain, however. "After review of the record, we conclude that we should eliminate RACES station licenses because RACES station licenses are unnecessary for amateur stations and amateur service licenses to provide emergency communications," the FCC said.

Under the new licensing scheme, there will be four examination elements. Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-question written test to obtain a Technician license; Element 3 will be a 35-question written test to obtain a General license, and Element 4 will be a 50-question written test for the Amateur Extra license. The FCC has left it in the hands of the National Conference of VECs Question Pool Committee to determine the specific mix and makeup of written examination

questions. Current Amateur Radio study materials remain valid at least until the new rules become effective in April.

The FCC's new licensing plan means someone will be able to become a ham by passing a single 35-question written examination. The plan also simplifies and shortens the upgrade path from the ground floor through Amateur Extra--especially since amateurs will only have to pass one Morse code test.

Elimination of the 13 and 20 WPM Morse requirements also means an end to physician certification waivers for applicants claiming an inability to pass the Morse code examination due to physical handicap.

The effective date provides a window of upgrade opportunity for current Tech Plus and Advanced class licensees. Between now and April 15, current Advanced licensees who pass or hold a Certificate of Successful Completion of Examination (CSCE) for the existing Element 4B, will meet the new requirements for Amateur Extra when the new rules become effective. Likewise, current Tech Plus licensees who pass or hold a CSCE for Element 3B will be poised to upgrade to General class when the new rules go into effect April 15. Any CSCEs must be dated on or after April 17, 1999, to be

valid April 15, 2000.

The FCC disagreed with the League's suggestion that it undertake a restructuring of operating privileges along with licensing
restructuring. "We believe that in light of ongoing discussions concerning implementation of new and more modern
communications technologies within the amateur service community, we should accord the amateur service community an
opportunity to complete such discussions and possibly reach a consensus regarding implementation of new technologies before
we
undertake a comprehensive restructuring of the amateur service operating privileges and frequencies," the FCC said in its Report

and Order.

In its amendments to Part 97, the FCC's Report and Order refers to a "Club Station Call Sign Administrator," something that
does
not exist under the current rules and which was not explained in the R&O itself. An FCC spokesperson said the Commission
plans
to issue a Public Notice soon to explain the program and to solicit qualified entities to serve as call sign administrators for club
station applications.

A copy of the entire Report and Order (FCC 99-412) is available on the ARRL Web site in Adobe PDF format or from the
FCC
Web site in plain text.

Frequently Asked Questions about Amateur Radio Restructuring

de reginfo@...
Copyright ? 2000, American Radio Relay League, Inc

http://www2.arrl.org/news/restructuring/faq.html

1.---
. Will anyone lose any Amateur Radio operating privileges after April 15, 2000?

No! All current license classes and privileges will remain the same, and all licensees will be able to renew their licenses
indefinitely. (The sole exception is for those who obtained a Technician license or exam credit prior to March 21, 1987--see
question 4, below.) The primary difference is that the FCC will stop issuing new Novice and Advanced class licenses after April

15, 2000. Beyond that, current Technician and Technician Plus licensees will be lumped into a single Technician licensee FCC
database. When renewed, current Technician Plus licenses will be stamped simply

"Technician." Technicians who have passed
Element 1, the 5 WPM Morse code examination, will enjoy current Tech Plus HF
privileges, but the burden of proof of having
passed Element 1 (5 WPM or any higher Morse code element) will be on the
licensee. The current "no-code" Technician license

will continue to be available after the new rules go into effect, however. It
will continue to offer the present VHF/UHF
privileges.
2.-----------
I currently hold a Tech Plus license. Can I take the current General class
written examination (Element 3B) right
now, then apply for an upgrade to General after April 15, 2000? I'm a little
confused on this point.

Yes. The FCC has told the League that current Tech Plus licensees holding a
Certificate of Successful Completion of
Examination (CSCE) for Element 3B on April 15, 2000, may apply for a General
class upgrade. The present Element 3B
examination has 30 questions; the new Element 3 test will have 35, so the
advantage to test before April 15, 2000, is slight.
CSCE
holders must attend a Volunteer Examiner session, complete Form 605, attach a
valid CSCE, and pay the required application
fee
($6.65 for the ARRL-VEC), if the VEC you use charges a fee. To be valid on April
15, 2000, your CSCE will have to be dated
on
or after April 17, 1999. A CSCE is only good for 365 days. (See also A Summary
of Restructuring Upgrade Possibilities.)

3.-----------------
I hold an Advanced class license. Can I take the current Amateur Extra class
written examination (Element 4B)
right now, then apply for an upgrade to Extra after April 15, 2000?

Yes. The FCC has told the League that current Advanced licensees holding a CSCE
for Element 4B on April 15, 2000, may
apply
for an Amateur Extra class upgrade. See question 2, above. The advantage here is
that the current Advanced licensee will face
a
slightly shorter 40-question examination under the current licensing regime to
get a CSCE for the current Element 4B. The new
Extra class Element 4 will contain 50 questions (and is expected to contain many
of the present Advanced class question pool
technical questions). To be valid on April 15, 2000, your CSCE will have to be
dated on or after April 17, 1999. A CSCE is only
good for 365 days. (See also A Summary of Restructuring Upgrade Possibilities.)

4.-------------------------
I got my Technician license under the old system prior to March 21, 1987, and I now hold a Tech Plus license as
a result. I understand that I'm now eligible to upgrade to General without having to take an additional examination.
Is this correct?

Yes. Holders of a pre-March 21, 1987, Technician class license (or a CSCE) may claim credit for a new General class license
after April 15, 2000. This is because under the old system, the written examination for Technician and General class was
identical;
the only difference was that Technicians had to pass a 5 WPM Morse code test, while Generals had to pass a 13 WPM Morse
code test. The upgrade is not automatic, however. You will have to apply through a Volunteer Examiner test session, complete
Form 605, attach documentary proof of having completed the requirements for a Technician license prior to March 21, 1987, and

pay an application fee, if any, to the VEC involved.

5.--------------------
What do I need for "documentary proof" of having held my Technician license before March 21, 1987?

Obviously, if you have an original or a copy of your Technician license issued anytime prior to March 21, 1987, that would
suffice.
Other documentary evidence could include an original CSCE for Element 3 issued prior to that date; an FCC verification letter of

having held a Technician license prior to March 21, 1987; a document from the FCC's contractor, ITS Inc; or possibly a
Callbook
listing dated prior to March 21, 1987, indicating your license class as Technician.

6.------------
I've lost my old license and didn't keep any copies. How do I get verification from the FCC that I held a
Technician license prior to March 21, 1987?

You can write the FCC, Wireless Telecommunications Bureau, 1270 Fairfield Rd, Gettysburg, PA 17325. Provide the FCC with
your name, address, and current call sign as well as all details of your licensing. The FCC may be able to verify in writing that
you
held a Technician license prior to March 21, 1987. You also may contact ITS Inc (visit http://www.itsdocs.com/). For a fee, ITS
will research prior licensing records and should be able to provide you with the necessary documentary proof.

7.----------
I've got an Advanced ticket now. Someone told me that I'll revert to General on April 15, 2000. Is this true?

Absolutely not, although this rumor has been making the rounds on the Internet and on-air discussion groups. You will continue
to
be an Advanced class licensee and have Advanced class privileges after April 15. Again, no one loses any privileges, and all
license classes stay the same.

8.----------
How can I find out where there's a Volunteer Examiner session so I can apply for an upgrade or take an
examination element?

A session search engine is available on ARRLWeb at http://www.arrl.org/arrlvec/examsearch.phtml. Also, feel free to contact local VEs or ask local clubs for information on testing sessions in your area.

9.----------
I now hold a General class ticket. Since there won't be any more Advanced tickets issued after April 15, 2000,
can't I just take the current Amateur Extra written examination (Element 4B) and use the CSCE to get my Amateur
Extra when the new rules become effective?

Nice try, but, the answer is no. If you're going to take your examination before April 15, 2000, you must complete both Element
4A (instant upgrade to Advanced) and Element 4B, then take your CSCE for Element 4B to a VE session on or after April 15 to

apply for your Amateur Extra ticket (this means filling out Form 605 and paying the application fee, if any, to the VEC). And
yes,
in this example, it means you would need to appear at two test sessions. You also could just wait until April 15 and take the
single
50-question Extra class written test. (See also A Summary of Restructuring Upgrade Possibilities.)

10.----------
I've got my Advanced now and want to take Element 4B before April 15, 2000. What license manual should I
study?

The new question pool has not been developed yet for the post-April 15, 2000, tests. Use the current Extra Class License
Manual, available from the ARRL. New study guides will be developed to reflect the new testing regime. Likewise, those
wanting to take Element 3B to upgrade from Tech Plus to General should study the current General Class License Manual,
available from the ARRL.

11.-----------------
Can I use my valid Element 4B credit CSCE for the Extra written examination element to upgrade before April
15, 2000?

Only if you also pass the 20 WPM Morse code examination. Otherwise, you'll have to apply after April 15, 2000, when the new
rules become effective. Remember, your Element 4B CSCE must be dated on or after April 17, 1999, in order to be valid on
April
15, 2000. A CSCE is only valid for 365 days. (See also A Summary of Restructuring Upgrade Possibilities.)

12.-----------
I'd heard that Novices and Tech Pluses would be getting an automatic upgrade to General when the new rules
go into effect. Is this true?

Unfortunately, no. In its comments to the FCC, the ARRL had proposed that the FCC upgrade all holders of Novice and Tech
Plus licenses to General class as a one-time action to permit "refarming" current Novice/Tech Plus HF subbands for higher-class

licensees. The FCC did not adopt this recommendation in its Report and Order of December 30, 1999, however.

A Summary of Restructuring Upgrade Possibilities

We emphasize that no one will lose any current Amateur Radio privileges as a result of the FCC's "restructuring" order of
December 30, 1999. There is no need to upgrade if you are happy with your current privileges, and no one's license class will
be "downgraded" if that individual chooses not to upgrade now or later. Also note that there are no automatic upgrades. All
who claim prior test element credit (eg, with a Certificate of Successful Completion of Examination or CSCE) must
present their credit(s) to a VE team at an exam session and pay the appropriate processing/application fee, if required.

Below is a summary of some of the upgrading possibilities afforded by the FCC's Report and Order of December 30, 1999.

Upgrading to Amateur Extra Class Without 13 or 20 WPM Morse Code Testing

Advanced: With no further code testing, to be ready to upgrade to Extra on/after April 15, you must pass Element 4B now
and present your Element 4B credit to a VE team on/after April 15. Or, take Element 4 on/after April 15.

General: With no further code testing, to be ready to upgrade to Extra on/after April 15 you must pass Elements 4A and 4B
now, thus getting your Advanced upgrade before April 15. Then, take your Advanced upgrade and your Element 4B credit to
a VE session on/after April 15. You also can take both Element 4A and 4B

credit to a VE session on/after April 15. You also
may pass Element 4 after April 15 (Element 4A cannot be bypassed; if Element
4B is not passed in this scenario before April
15, on/after April 15 the Element 4A credit previously earned would have no
value toward any future upgrade under the new
system).

Technician Plus or Technician with 5 WPM or higher Morse code credit: To be
ready to upgrade to Extra on/after
April 15 with no further code testing you must pass Elements 3B, 4A and 4B
before April 15, then take this credit to a VE
session on/after April 15. Or, you must pass Elements 3 and 4 on/after April
15. (Technicians able to document passing the
Technician/General written examination before March 21, 1987, can present this
proof as credit for Element 3B before April
15, or as credit for Element 3 on/after April 15).

Technician (no Morse code credit): To be ready to upgrade to Extra on/after
April 15 you must pass Element 1A, the 5
WPM Morse code test, and you must pass Elements 3B, 4A and 4B before April 15,
then take this credit to a VE session
on/after April 15. Or, you must pass Elements 1 (the 5 WPM Morse code test), 3
and 4 on/after April 15, to qualify under the
new system.

Novice: To be ready to upgrade to Extra on/after April 15, you must pass
Elements 3A, 3B, 4A and 4B before April 15, then
take this credit to a VE session on/after April 15. Or, you must pass Elements
2, 3 and 4 on/after April 15.

Other Upgrade Examples

Technician Plus or Technician with 5 WPM or higher Morse code credit desiring
to upgrade to General: With no
further code testing, you must pass Element 3B before April 15, then take this
credit to a VE session on/after April 15. Or,
you must pass Elements 3 on/after April 15. Grandfather credit is also
acceptable, per above.

Technician desiring to gain Novice/Tech HF privileges: You may pass the 5 WPM
code test at any time, before or
after April 15, 2000.

Novice desiring to upgrade to General: You must pass Elements 3A and 3B before
April 15, then take this credit to a VE
session on/after April 15. Or, you must pass Elements 2 and 3 on/after April
15.

Novice desiring to upgrade to Technician with HF privileges: You must pass
Element 3A before April 15, or pass
Element 2 on/after April 15.

736. Wintery Weather Monitoring

Yahoo group: chattradio
Date: 2000-01-27 04:21:03 UTC
From: Matthew Sadler
Topic: 736 Message: 736

With the media hype about the coming weather, thought I'd pass along a quick-reference sheet for frequencies to monitor. Additions or corrections are always welcome.

UTILITIES---------------
Electric Power Board: 451.050, 451.225, 451.375, 451.675, 452.150, 452.450
Chickamauga Telephone: 35.160 (simplex)
Bledsoe Telephone: 151.985 (repeater)
Volunteer Electric: 451.075, 451.425, 451.475
Chattanooga Cable: 461.300, 461.475
North GA Electric: 48.180, 48.480
Ringgold Telephone: 451.350

ROADS & PUBLIC WORKS----
Chattanooga: 453.650, 453.825, 453.900
State of Tennessee: 156.180, 159.180
Hamilton County: 159.105
Soddy Daisy: 453.750
Collegedale: 453.175
Fort Oglethorpe: 453.350
Rossville: 155.040
Signal Mountain: 46.560
Walker County: 46.560
East Ridge: 39.820

Anything else I should mention? If you say "yes," then mention it yourself! :)

All I can think of at the moment.

Topic: 736 Message: 739

I know TDOT is supposed to be fielding 6 of them sometime this year down here, but as yet I haven't seen any frequency for them. I'm kinda wondering if they'll show up on the city's 800 system with their own talkgroup or if they will get their own frequency. Will certainly post it whenever I find something out.

740. Re: Wintery Weather Monitoring

Yahoo group: chattradio
Date: 2000-01-28 13:50:59 UTC
From: TGO1@aol.com
Topic: 736 Message: 740

Matthew:-
Our units here have local radios (800 mhz) as well as the high band TDOT sets. I found the freq by searching the Rat Shack "Police Call" for 2000. I don't buy one of these every year, but there are some new allocations especially in the UHF and
VHF 12.5 splits. The 157.500 here does show in a repeater near Sevierville, but most of the time the talk is simplex from the TDOT regional garage.

741. GEMA HF?

Yahoo group: chattradio
Date: 2000-01-31 14:20:27 UTC
From: LFDGAJR@aol.com
Topic: 741 Message: 741

Does anyone know the frequencies that the Georgia Emergency Management Agency uses on HF? I was just reading a report about the wintery weather in Georgia over the past two weekends in which it was stated that GEMA ran their HF net to receive check-ins of bad weather and other pertinent information from all over the state. I know I missed a good monitoing experience this time, but I want to know the frequencies so that I don't miss it next time.

Thanks for the help,
Christian KF4ZMB

From: Chris Palmgren
Topic: 741 Message: 742

Christian, Georgia ARES operates on 3.975 MHz. Also, locally, the GA ARES/Skywarn net is heard on N4BZJ 224.680- and N4YYD 145.250-. I also found their net on 146.885+ PL 100.0 in NE GA over the weekend. 73 Chris Palmgren, W4ORS Hamilton County ARES AEC Member ARRL attach: Please read about the last Skywarn/ARES net below: What a weekend! I just wanted to drop a line to thank everyone that helped with our SKYWARN activation this past weekend. It seemed to us that most everyone had some icy conditions, some more than others. On late Friday afternoon, Terry Murphy from the NWS office in PTC called and advised me of the weather that was almost at the state line. SKYWARN's assistance was requested at this time. Our activation ran from 4:45pm to 12:15am on Friday to Saturday a.m. (per the forecaster advise) At 7:45am on Saturday, a call was made to the NWS. The weather was becoming more unpredictable, so SKYWARN was put into activation again. This session ran from about 8:00am to 9:00pm that day (again, per the forecasters call) Many reports (and I mean MANY!) came in over those 2 days. Both the NWS and GEMA (who was running the HF net) thank the operators with the much needed and timely info that was provided. I want to thank Lynn KN4YZ, Wade KU4OJ and Kathy KG4DQQ for their assistance during this activation. I also want to thank ALL of the operators (to many to mention!) that assisted either by their reports, getting us reports from other repeaters or by relaying from the hf net to the link system. Remember: That in the month of February we will be taking checkins over the link system for the GA ARES net (on hf 3.975 at 5pm local), these will be relayed in. Net controls will be different each week, encompassing many of the operaters who work the ham station at the NWS. Look for those repeaters on this page , http:\\www.geocities.com\BourbonStreet\1180 Thanks and 73, Robert Burton KD4YDC AEC ARES / NWS in Peachtree City GA SKYWARN ----- Original Message ----- From: To: ; ; ; ; ; Sent: Monday, January 31, 2000 9:20 AM Subject: [chattradio] GEMA HF? 745. New Fed Freq?

Yahoo group: chattradio
Date: 2000-02-01 14:34:21 UTC
From: Larry Van Horn
Topic: 745 Message: 745

I am getting traffic on 170.100 MHz (apparent repeater output). It appears as this is part of the law enforcement effort associated with the Great Smokey Mountain NP. Does anyone have anything on this operation? Is this a link or a new repeater operation somehwere in the park?

FYI-This freq is also being used locally by the FBI in the search for Eric Robert Rudolph. We hear occasional scrambling and some clear voice. They have referred to this one as Charlie 1 in the last few months.

I also hear some real funky occasional data burst on this one, but don't even have a clue as to what it is.

Any help from my nieghbors up north? Thad anything from your end?

73 all and good hunting,

Larry Van Horn

After monitoring 170.100 mhz up here in Knox County, I observe that the voice traffic is simulcast with 167.150, the primnary dispatch freq for the Freat Smoky Mtns NP.
The signal is even clearer here at my house than the 167.150, which leads me to believe it is some sort of point-to-point link in their system (most of their links are UHF). Both sides of the conversation are heard, and PL has been removed from the
carrier. I have not heard data other than occasional paging splatter into my cheap scanner.

Monday, February 7, 2000
LA TIMES

Radio Hackers Interfering With Police Calls
Technology: In a growing problem, pranksters on law enforcement frequencies have broadcast bogus emergency calls and rants.

By JACK LEONARD, Times Staff Writer

Emboldened by new technology, hackers are invading police emergency networks with increasing frequency, confusing officers across Southern California with hundreds of rogue broadcasts last year that wasted police time and in extreme cases delayed responses to emergencies.
Such security breaches, which a few years ago occurred only a handful of times a year, are becoming a common problem that affects one local agency or another almost daily.
Police channels were once "sacred ground. . . . But with new technology, that's not the case," said Santa Ana Police Sgt. Raul Luna. "We're much more vulnerable."
Although it might seem like the harmless work of a few pranksters, police say the security breaches have serious consequences. Consider:
* In one of the most serious cases in recent months, a hacker interfered with a California Highway Patrol pursuit of a tagger in Los Angeles' Chinatown. The rogue broadcast delayed officers' calls for backup. By the time police units arrived, the tagger had slipped away.

"It definitely interrupted the pursuit," said CHP Det. David Flores, adding that future transmissions could have more serious consequences. "An officer could be out there with something overwhelming happening, and he cannot get on the air. It could cost somebody their life."
An investigation into the incident led CHP investigators to arrest 63-year-old Bell businessman Jack Gerritsen. He is also the subject of an investigation by Orange County sheriff's officials into more than 100 breaches of their radio channels over the last year.
* A burping hacker--dubbed "the phantom"--regularly breaks into the Huntington Beach band, sometimes masquerading as an officer under attack. The hoax broadcasts have thrown staff into a panic and

forced them to make hurried checks on patrol units to ensure none are in danger.
* Last summer, a hacker posing as a Brea police officer warned of shots fired near City Hall, prompting police to evacuate portions of the civic center and seal off surrounding streets as they combed the area for a possible gunman.
* Santa Ana officials alerted officers last month to a singer belting out gangsta rap lyrics over the city's police channel. The transmission prevented officers from calling in their positions for more than a minute until the song had finished.
Officials blame the increase in hackers on the growing availability of cheap high-tech radios. Swap meets and private sellers offer gadgets for as little as $300 that can be modified to transmit on police channels.
"I think it's becoming more prevalent because you're getting more people out there who like to mess around with radios," Flores said. "And the technology has become more sophisticated."
Other hackers are opportunists who manage to get their hands on a police officer's hand-held radio.
"An officer will leave their radio lying inside their car, and someone will snap it up," said Long Beach Police Sgt. Steve Filippini. "Usually they can use it for a few days and the battery will go dead."
Police agencies, officials said, are virtually helpless when their radio channels are invaded because some current networks lack the security features of newer ones. Overriding the messages, they said, is impossible without cutting off some officers' access to the frequency. Officers who try to talk over the hackers only broadcast garbled messages.
Catching hackers is notoriously difficult. Law enforcement officials must be prepared to track the transmission when it begins if they hope to pinpoint the source. Even when caught, suspects face misdemeanor charges, bringing a fine and a maximum jail term of a year.
Orange County agencies are spending millions of dollars on a new radio system that will--among other features--encrypt police frequencies and better protect channels from invasion. Irvine and Tustin police are scheduled to start using the system this month, with the rest of the county joining by year's end.
The new technology will allow agencies to determine whether prank broadcasts were made by police radios or outsiders. But law enforcement officials said they believe the system will provide a respite rather than a cure.
"Technology will eventually come on line so that hackers will be able to figure out how to interfere again," said Orange County Sheriff's Capt. Joe Davis.
Los Angeles County has no immediate plans to install such safeguards.

Pranks Pose Potential for Substantial Harm
So far, local officers said they have been lucky; no one has been

hurt because of prank interference. But interruptions make it difficult for police officers to communicate with each other or with headquarters. Officials said it's only a matter of time until a security breach occurs at the wrong moment, putting officers or the public in harm's way.

There have been close calls.

The Chinatown incident occurred last November as CHP officers were staking out an area around the Pasadena Freeway that has been repeatedly hit by taggers.

About 7:30 p.m., officers noticed a tagger spraying the wall and began pursuing him by car and foot. Just as officers were about to broadcast instructions to set up a perimeter around the area, the hacker breached their frequency and began a 20-second rant against the LAPD Rampart Division.

"It was so frustrating that this guy was interfering," said the CHP's Flores. "We were trying to catch this guy."

By the time the radio became free again, it was too late, Flores said. Officers arrived at their perimeter positions, but the suspect had slipped through.

In Northern California, CHP dispatchers in December heard a plea for help from someone claiming to be a police officer. The voice said a fellow officer was injured and near death at a location near Fresno. Officials dispatched officers from various agencies and sent a helicopter and airplane to scour the area, but concluded after hours of hunting that the call was a hoax.

The same hacker is believed to be responsible for fake calls of officers injured and shots fired in Berkeley, Richmond, Oakland and Vallejo, said Richmond Police Sgt. Mike Walter.

Police departments from Oregon to Florida report similar problems.

"My impression is that it's going on all over the country," said Alan Burton, a Benicia, Calif.-based consultant on 911 systems. "The thing has been a continuing problem."

Burton said the digitalization of radio systems could help, but he doubts it will completely keep hackers off the airwaves.

"Even then, I'm not sure we ever will," he said. "There are guys who stay up all night trying to hack into whatever they can, police radios, the Pentagon."

Police in Huntington Beach have for five years listened to "the phantom," who interferes with the agency's radio band two or three times a month, said Lt. Chuck Thomas.

"He'll burp, he'll make noises like he's going to the bathroom," Thomas said. "It's disruptive. We've had him come on the radio and say, 'Shots fired.' That perks everyone up."

Mimicking Police Distress Calls

The phantom has even pretended to be a police officer in distress, sending other officers into a panicked hunt for their colleague in trouble, Thomas said.

"This happens fairly regularly to us," he said. "We've instructed

people to completely ignore him. He wants us to react. Maybe he gets a kick out of us reacting."

Often, hackers' primary motive appears to be crude.

Police officers in Santa Ana last month were forced to listen to a rap song from another hacker whose profanity-filled lyrics assailed officers, said Sgt. Luna. Under such verbal assaults, some officers try to use their radios to order hackers to stop broadcasting, but the tactic rarely works.

Luna heard one 60-second rant in which the hacker sang profanity-laden rap songs attacking Santa Ana officers.

"I was stunned," he said. "He was so forthright and brazen with his comments. . . . It's almost like he's got a personal vendetta."

In the case of the Bell businessman arrested last year on suspicion of hacking, personal experience played a key role. Gerritsen said in an interview that he played the recording on thousands of occasions over numerous radio bands, some of which were probably used by police. He said he was once the victim of police brutality, and argued that broadcasting his message condemning the LAPD's Rampart Division should be protected by free speech rights.

He said his intention was to protest police misconduct, not to interfere with police work.

Police accuse him of going on a rampage, hitting police in Beverly Hills, Long Beach, Maywood, Garden Grove and the Orange County Sheriff's Department with a barrage of transmissions. The recording attacked police officers, particularly the Rampart Division, where some gang officers are being investigated for alleged corruption.

For more than a month, prerecorded messages came over the airwaves. Sometimes, the messages were repeated again and again. Orange County sheriff's officials logged 133 broadcasts of the message in just over a month before they stopped counting.

Alarmed by the extent of the problem, CHP detectives teamed up with investigators from the Federal Communications Commission to trace the transmissions' source. They began a painstaking probe, using high-tech equipment. Investigators eventually made their way to a currency exchange shop in Bell.

The CHP's Flores said that on Dec. 28, he and other investigators watched as Gerritsen left the business, walked to the parking lot and activated a pocket-sized radio. They listened, Flores said, as he made an identical broadcast.

He was booked on suspicion of disrupting public safety communications. The Los Angeles County district attorney's office is reviewing the case. Orange County sheriff's investigators said he also could face prosecution in Orange County.

Thought I'd post a test message, but this one has CONTENT!

BellSouth was kind enough, due to a billing screwup on their part, to cancel my internet account. Then they tell me it'll take 72 hours to recreate my email account (to which I rather unpolitely told them NO, if you can kill it that quick, you can recreate it that quick too).

Anyhow it's back working (now, anyway). And, so this message isn't sent in vain, here's a list of current frequencies and their usages at UTC (University of Tennessee at Chattanooga for the non-locals). I work for parking services writing tickets (or issuing citations, if you will). If you ever listen to the parking services channel, I'm 961.

* All are simplex.

FREQUENCY USE
151.595 Parking Services
155.550 Campus Police channel 1
155.925 Maintenance, Campus Police channel 2
464.675 UTC Arena

If you look on the FCC website, it shows 159.765 as applied for by Parking Services and 151.595 licensed to UTC, attn: Fine Arts Center. This has me slightly puzzled but what I've posted above is the correct information, trust it, NOT the feds. Never trust the feds. :)

More as it becomes available...

[Emergency] Digest Number 176
Subject: Breaking news / interesting site

http://www.incidentpage.net/

The idea is, they have people listening to scanners all over the place. When they
hear something major, the send it to this company. The company then sends it out
to your alpha pager if it's in your state. You can also display it on your computer
screen while you're on the net as a crawl.

Could be a good way to find out about things we're trained to help with. I just signed
up for their free membership level, so I can't comment yet on how well it works, but it
has the potential for being very useful IF they get good information for our area. If
you like listening to scanners, they're looking for new reporters.

766. Satellite Excitement = fyi

Yahoo group: chattradio

From: Dewey Bryant KD4EHC
Topic: 766 Message: 766

aprssig digest: February 23, 2000
Number: 19

New Satellite Excitement for the Mobile FM or APRS Traveler/user.

1) SUNSAT is now transitting a pre-recorded VOICE on 145.825 during todays passes. The signal is dead full quieting on any 2m FM receiver. Next (last pass) is at 23:32 EST (20:32 PST) tonight (wed).

2) UO-14 was enabled for VOICE just like AO-27 last night. So add it to your tracking list. Uplink is 145.975 and downlink is 435.070 FM! This triples the on-orbit FM satellite voice capabilities.

767. Question about IF filter

Yahoo group: chattradio
Date: 2000-02-26 16:24:27 UTC
From: LFDGAJR@aol.com
Topic: 767 Message: 767

I have just purchased an Icom PCR100 and want to use it, among other things, to monitor Military Air (UHF). The radio allows you to set the IF filter that you wish to use. The available choices are 6, 15, 50, 230 kHz. I have been using 15 kHz for the local police and fire traffic (in the NFM mode). The book says that 6 kHz is the factory setting for AM. In addition you can't use the 230 kHz IF on AM. The question I have is, is 6 kHz the correct IF filter for picking up UHF-Air in AM (VHF-Air in AM for that matter too)? Also what IF filter should I use for Military signals in WFM?

Thanks for your help,
Christian KF4ZMB

Use 6 KHz. for any AM. You would use 50 KHz. for WFM. The 230 KHz. is used to receive data streams like WeFAX from weather sats. (You need an external decoder to display the data.)

You will also need a better than usual scanner antenna to receive the 1.6 GHz. sats. Normal ground plane or discone type antennas have too much signal fade. I have seen some decorders advertised in magazines like Communications Quarterly, QST, CQ, etc. Sorry I can't point you to a better source.

external
> decoder to display the data.)

Negative. The 50 kHz filter will be a better choice for the orbiting wxsats except at the far end of the passes when the doppler shift is at its extreme. 230 kHz is absolutely to wide for any wxsat work. It let's in to much noise and dirties up to pics to were they are unusable.

Have fun out there and good hunting,

Larry Van Horn

HCSO has started simulcasting dispatch onto the 800 system, and I've heard from the grapevine that they will start simulcasting everyone on 800 soon.

Talkgroups are 19568 for east side (channel 1, 460.050) and 19600 (channel 3, 460.275).

More as it becomes available.

Gang,
After seeing that you can find/buy/use any 2-way radio or wireless device, message system, phone or satellite/computer without being a HAM these days, I' was getting a little depressed about the future of the hobby. But was slowly concluding that its not the TECHNOLOGY, its what WE DO WITH it that makes our hobby fun. I was going to post a get-out-n-play message, but then saw this message (below). Maybe it is a great opportunity! Set up a table outside your local Movie theatre and show your stuff! A Great All-American HAM-day.

Gainesville Dispatch is the HQ for the Chattahoochee NF. You'll probably also hear the Cherokee Dispatch on 169.925 MHz. My sources have indicated that there were over 3,000 acres of forest fires in the SE yesterday.

787. NEW STORM PREPARATION PLAN

Yahoo group: chattradio
Date: 2000-03-09 17:52:27 UTC
From: Dewey Bryant KD4EHC
Topic: 787 Message: 787

[Emergency] Digest Number 181

Message: 1
Date: Wed, 08 Mar 2000 08:08:31 -0500
From: Robert Hill~WX3ROB <robhill@...>
Subject: FEDERAL WEATHER AGENCY...

Newspaper article, from the Joplin (MO) Globe, Friday, March 3, 2000...

FEDERAL WEATHER AGENCY UNVEILS NEW STORM PREPARATION PLAN

(The Associated Press, Norman, OK)

Using tactics forged in one of the country's most weather-hardened states, the National Weather Service wants to turn America's communities into a solitary storm-fighting force.

The agency Thursday [3/2/2000] unveiled its nationwide StormReady program, a code of principles and techniques it claims will better prepare Americans to face severe weather from floods to tornadoes to hurricanes.

"The fact of life in the United States, by and large, is not _if_ severe weather is going to occur, it's _when_ it's going to occur," said National Weather Service Director John. J. Kelly Jr. "And when it occurs -- particularly with tornadoes -- we need to be ready in advance figuring out what to do, not figuring out what to do after the weather occurs."

Kelly said the United States is the most storm-profile nation in the world, averaging more than 1,000 tornadoes, 1,000 flash floods and 10 hurricanes a year.

That includes the May 3 [1999] tornadoes that killed 44 people in central Oklahoma and caused about $1 billion in damage in the state.

Kelly said the StormReady program presents a basic set of guidelines meant to uniform the way communities fight such natural disasters.

The program calls for regional advisory boards to examine cities that want to participate.

A StormReady designation would have to be renewed every two years.

To be dubbed "StormReady", a community must have a 24-hour warning point and emergency operations center. It must also have more than one method of alerting the public in case of a storm and have a weather-monitoring system. A public readiness program involving seminars and exercises is also required.

StormReady was developed by the National Weather Service office in Tulsa
[OK], which has been running the pilot program for a year in eastern
Oklahoma and parts of Arkansas, said Tulsa meteorologist Lans Rothfusz.

I have used the RS discone. I believe they may have changed the model as I bought mine a couple of years back on close-out. Mine is a fairly strongly built that works well from 2 meters up.
Many of the higher priced discones include a 1/4 wave base-loaded whip that is "tacked" on top of the discone to increase coverage to 30 MHz./10 meters.

790. Re: [chattradio] Discone Antennas

Yahoo group: chattradio
Date: 2000-03-11 00:16:06 UTC
From: Jim Knight
Topic: 789 Message: 790

I have a Nevada SE1300 which is very close to the same if not exactly the same as the Diamond D130J. (It has an N connector at the feedpoint, and the whip on top for low band coverage.) I am pleased with it as an overall scanner antenna, plus I can transmit on 6 meters, 2 meters and 440. Sorry, no direct experience with the RS discone. I remember several years ago when I was shopping for an antenna that several people in the rec.radio.scanner newsgroup did not like the RS discone, and this somewhat influenced my decision to get the more expensive one.
The construction of the Nevada antenna is good and I have had no trouble with corrosion or wind damage. Just be sure to put coax seal on the feedpoint, no matter which one you end up getting.

791. new sheriff TGs

Yahoo group: chattradio
Date: 2000-03-20 10:35:40 UTC
From: David S <UnNamable>
Topic: 791 Message: 791

Friday evening heard Hamilton County Sheriff go to what they called "The Talk Channel" 21168 and last night they went to "County Net One" 20912 and they have 460.400 Mutual Aid patched to 16528 as Ch# 4 on their radios.
Only a few units have 800 radios. BTW Has there been any traffic on 460.100??? I haven't heard anything on it at night lately.

EMS is now patching the medic-hospital 155.340 on 18992. They started this last night.

792. New NOAA NWS Transmitter

Yahoo group: chattradio
Date: 2000-03-20 21:16:15 UTC
From: Larry Van Horn (Monitoring Times)
Topic: 792 Message: 792

Good afternoon all,

In case you aren't aware, we now have our new NOAA weather radio service up and running on 162.525 MHz (WWG82) transmitting from the UNC Public TV tower on Johanna Bald Mtn near Robinsville, NC. It is in its testing phase now through the end of April. The Greenville-Spartanburg NWS office is responsible for this broadcast. It should improve wx warnings to locals here in the Cherokee, Clay and Graham Co, NC areas. Nice to finally have a NOAA weather radio broadcast we can hear reliably.

Have fun and good hunting,

Larry Van Horn

EMS "Tac 1" 20112
and couldn't get the name of this one due to working on the EMS one but here goes
Hamilton County Sheriff "unknown" 19760
EMS units are now transmitting on 18640

794. more TGs

Yahoo group: chattradio
Date: 2000-03-23 10:36:16 UTC
From: David S <UnNamable>
Topic: 794 Message: 794

for Ham. Sheriff:
"Mutual Aid Three" 20784
"Jail" (I labeled it from TG traffic) 21200- thought it was Mocassin Bend Hospital until I heard the driver say "Control- Open the sallyport" about 20 mins after he got to the Bend.
and two unknowns so far
19760 and 19792 but I know they are Sheriff due to traffic such as "Process 1 407". I think one of those is patched to 460.100 Mhz; I heard traffic on .100 last early evening but couldn't switch modes fast enough and I think .100 is only used during daytime.
and the "Talk" channel can also be labeled "Car-Car" 21168.
they also have Mutual Aid 16528
I'm wondering if they will patch the "Collegedale Channel" 462.550 Mhz?!

A side note: In case noone else knew- Butch Johnson (I believe that name is correct he's the the traffic dude for KZ106 and others) can transmit on the TRS. He is known as "Air One".

795. one TG

Yahoo group: chattradio
Date: 2000-03-24 10:19:42 UTC
From: David S <UnNamable>
Topic: 795 Message: 795

Just one new TG last night for HCSO:
Mutual Aid Two 20752

To recap

The list so far for HCSO:
East 19568
West 19600
Car-Car/Talk Around 21168
Mutual Aid 2 20752
Mutual Aid 3 20784
County Net 1 20912
Jail 21200
unknown 19760 (this one and the next one sometimes are transmitting the same thing.
unknown 19792
I'm not sure if Mutual Aid 16528 is programmed in and if they will program a patch for 462.550 Mhz Collegedale Channel.

The list so far for HC E.M.S.:
Main 18640
Ops 18608
Tactical 1 20112
Chattanooga MEDCOM 18992

If others have confirmed more TGs please post!
Is 17552 E.M.A. Chattanooga or Hamilton County or both??? Thanks in advance!
David

April 15th test sessions
==========
* Sequachee Valley ARC
* Chattanooga Amateur Radio Club

The Sequachee Valley ARC Volunteer Exam team will be holding a special test session for hams wishing to upgrade under the new FCC rules. This session is designed for those who will automatically upgrade and only need to process paper work under the grandfather rule...

April 15th 2000 - 2:00PM - Jasper Public Library

BUT!
IF we get the new tests in by this date, we will also administer the new exams for TECH, GENERAL and EXTRA.

If you wish to take one of these tests, please contact :
Wally KD4XV KD4XV @...
Edgar KF4CJ edawson@...

The Chattanooga Amateur Radio Club is having a special VE session
April 15 at the Red Cross building, Chattanooga.
Starting about 8:30 am so those who desire can catch the airshow.
While mainly for paper work upgrades,
exams will be given provided suffient VEs can be located.
Arrangements will be made to allow handicapped people in the parking lot.

798. National Guard frequencies?

Yahoo group: chattradio
Date: 2000-03-29 21:02:29 UTC
From: Matthew Sadler
Topic: 798 Message: 798

I was just looking at the information for Lovell Field (Chattanooga, TN) on AirNav (http://www.airnav.com/) and noticed the following entry at the bottom of the list of frequencies:

NG OPS: 149.8
373.9
41.5FM

Anyone know if these are National Guard frequencies in use at Lovell Field? It's my best guess right now.

799. talkgroup observations

Yahoo group: chattradio
Date: 2000-03-30 01:49:49 UTC
From: Jim Knight
Topic: 799 Message: 799

I've been listening to talkgroups 19760 and 19792 this afternoon and never heard anything other than units reporting in as 407 or 408. I wonder if this is the purpose of these channels - just for units to report when they are in or out of service. And by the way, can anyone enligten me on the meaning of "Process" followed by a unit number? Most if not all the units checking on on these talkgroups were "process" units.

19248 appears to be an ambulance to hospital channel. I heard two different conversations between Erlanger and an ambulance.

19504 had a brief conversation about a patient with head injuries, so I assume this is yet another EMS channel.

These last two groups are new to me and aren't on Matthew's page, so I thought I'd pass them along to the group.

800. Re: [chattradio] talkgroup observations

Topic: 800 Message: 800

Same for me on the "Process" stuff! I think they serve official papers but
I'm not for sure!
Jim? Could those two unknown TGs be related to 460.100 Mhz? Because I never
hear anything on .100 at night which is the same for the 2 TGs.
The "Mutual Aid 1" for HCSO is 16528 -confirmed last night.

TG 19248 is EMS's "Erlanger Channel" Medic to Hospital.

I haven't heard the 19504 TG yet because I had just found out yesterday
evening that they had the medics go to different channels for the medic
reports to hospitals. Would these "medic to hospital" channels be
considered under Chattanooga MEDCOM or Hamilton County EMS? The medics do
have to go to 18992 MEDCOM to request patches to hospitals.
If they go under Chattanooga MEDCOM, does Chattanooga Local Government own
MEDCOM?
Thanks in advance!

801. Tenn. Airport Frequencies

Yahoo group: chattradio
Date: 2000-03-30 21:19:18 UTC
From: Scott Medlin
Topic: 801 Message: 801

A relatively new addition to the TDOT website is the
Tennessee Airport Directory. This directory has
listings of tower, approach, and departure
frequencies; as well as, AWOS and ASOS sites
throughout the State. For those who are interested, a
link is included below.

http://www.tdot.state.tn.us/aeronautics_division/airports/directory.htm

From: Dewey Bryant KD4EHC
Topic: 803 Message: 803

HELP NEED: Amateur Radio Operators June 24 & 25, 2000
de KD4EHC

The ADA Tour de Cure 2000 will be on Saturday & Sunday June 24 - 25 this year.
Yes, on Field Day weekend.....
Both the Nashville to Chattanooga & the Knoxville to Chattanooga
will be occurring simultaneously like last year.
Participation by several radio clubs & on multiple repeaters will be necessary
for continued success on the Tour.
Day 2: Monteagle to Chattanooga & Athens to Chattanooga on Sunday, June 25
is when SE TN area amateur radio operators will be needed most.
Marion & Sequatchie hams will shepherd riders off the mountain and
across the valley thru Suck Creek.
McMinn & Bradley hams will assist getting rider down the valley thru
to White Oak to Georgetown.
Hamilton hams will run both the Hwy 58/Aminicola & Suck Creek/Stringers Ridge
routes on separate repeaters to the Finish Line,
which is at the Tennessee Aquarium again.

Please make plans to help and contact me:

Children's ER (Medic-Hospital): 19440
Erlanger ER (Medic-Hospital): 19248
All other ER comms are still on 18992 patched to 155.340 Mhz so far that I know of.

EMS First Response/Chatt. FD "Fireground 4": 19504
I'll reconfirm that FD channel name when it comes back up, because I didn't hear that name clearly enough. Chatt. FD units can talk to EMS units direct on this channel and vice-versa.

Jim, I was surfing the net this morning to look for some USAF
Thunderbird freqs myself,
here is what I've discovered so far:

114.9500 Thunderbirds ?
124.9300 Thunderbirds ?
140.0000 Thunderbirds ?
142.0000 Thunderbirds ?
236.5500 Thunderbirds Air to Air
236.6000 Thunderbirds Air to Air
241.4000 Thunderbirds Air to Air
273.5000 Thunderbirds Air to Air
283.5000 Thunderbirds Air to Air
294.7000 Thunderbirds Air to Air
322.3000 Thunderbirds Air to Air
322.6000 Thunderbirds Air to Air
382.9000 Thunderbirds Air to Air
394.0000 Thunderbirds Air to Air
141.8500 Thunderbirds Air to Air (pilot to pilot chit chat freq.)
Verified 4/28/96.
140.4000 Thunderbirds Air to Air (Tactical)
413.0000 Thunderbirds Ground Support
413.0250 Thunderbirds Ground Support
120.4500 Thunderbirds Operations
250.8500 Thunderbirds Team Leader

All of these freqs will be in the AM mode. Also tune into your Tower
freq,
this usually works for finding new freqs when the Tower informs the pilot

which freqs to operate on.

Of course, not all of these freqs will be used at the show but I bet the
chit chat freq should still be good.

==========

I'm currently monitoring USAF Thunderbird Maintenance comms on 413.025 FM using callsigns of Mach 2 and Mach 5. I'm located about 2 miles away from the airport at present. Also, a good indicator of when practice sessions and performances will start for the airshow may be found on the Chattanooga ATIS (Automatic Terminal Information Service) frequency of 119.85 AM. 815. Airshow freqs.

Yahoo group: chattradio
Date: 2000-04-14 20:43:11 UTC
From: Jim Myers
Topic: 815 Message: 815

141.850 was good for Thunderbirds air to air chit chat during orientation flight today. They were in AM mode, but FM reception was readable 95% of the time, so any scanner is usuable. They were also readable (simulcasting?) on 258.0 AM.
121.700 is Chatt. ground control. Airboss directing movements on taxiways.
135.450 was called out as Airboss freq., but I failed to hear any traffic on it.
413.025 FM T-birds Ground support was active during practice today, too.
Thanks Jonathan for the list!

These proved to be the best freqs. I
found Saturday, with 141.850 being THE
ONE to listen to during the Thunderbirds
performance. The pilots' exuberance was
really entertaining. Lots of chatter after
they landed too- joking about "another
hard day's work", etc.
I don't know about other brands, but both
of my Yaesu HT's can be switched to AM
reception on that freq.

Thanks to everyone who sent me freqs.

817. New talkgroups heard during airshow

Yahoo group: chattradio
Date: 2000-04-16 23:19:53 UTC
From: Jim Knight
Topic: 817 Message: 817

20208 was in extensive use at the airshow and was identified as "Tac 3".
EMS was using it extensively.
20624 was also in use but I never heard it identified. Sounded like
different airshow officials.
20144 was heard only once so it might have been invalid data. Sounded
like EMS again.

"A little more pullllllll" - the most heard line from the Thunderbirds on
141.85

This is the same sort of comms that the Blues have done for years. I have miles of tape
on those folks doing the same cadence type calls. My personal favorite from Saturday's
show on 141.850 heard during the pre-take off taxi was from T-bird No. 4

"I'm in the slot and its where its hot."

Also caught the Golden Knights aircraft a/g during their demo on 123.500 MHz.

All in all it was a great show (we were in the Lee Road Sam's Store parking lot) trying
to finish up our shopping trip.

Also many many many thanks to the Chattanooga ARC group that came in Saturday
morning for the VEC session at the ARC. I really really appreciated their time, assistance
and sacrifice. It was nice to have my upgraded ticket, Saturday night, even if HF conditions
sucked. The Charlie AD4F and the his entire VEC crew: "BZ from the Chief."

BTW-I did talk with local CARC officials about coming over to a CARC meeting in the near
future and giving their club a good old fashion LVH radio talk (scanners, shortwave, utes, spectrum,
whatever they want). If I do come over, I'll post it here and hope to see some of you nice folks
on this list at their get together.

Again great airshow, I did miss seeing the stealth which is what I really wanted to see. :-((

73 all and good hunting,

Larry Van Horn

20208 was in extensive use at the airshow and was identified as "Tac 3".
EMS was using it extensively.
20624 was also in use but I never heard it identified. Sounded like
different airshow officials.
20144 was heard only once so it might have been invalid data. Sounded
like EMS again.

"A little more pullllllll" - the most heard line from the Thunderbirds on

820. Gordon County EMS (?)

Yahoo group: chattradio
Date: 2000-04-21 23:05:18 UTC
From: LFDGAJR@aol.com
Topic: 820 Message: 820

Does anyone know the frequency(ies) used by the Gordon County (Georgia) Emergency Medical Services? I am mainly interested in the dispatch frequency. I have put up a new antenna and with my new IC-PCR100 I will finally have enough space to include all the area EMS channels.

Thanks in advance for your help,

824. Elian extrication

Yahoo group: chattradio
Date: 2000-04-23 18:26:26 UTC
From: Dewey Bryant KD4EHC
Topic: 824 Message: 824

FROM: milcom-digest V1 #1054

From: "Robert Wyman" <wymanent@...>
Subject: [MilCom] Elian extrication

Although I slept through WWIII this morning, others in the local area were up and report heavy news media radio activity but not much else. Video shows VHF handhelds in use by INS during the operation, and possibly some small VHF or UHF on the raid team equipment packs. Video also showed the vans had no license plates...probably rentals.

No one was aware of the "game plan" and as such we did not have any opportunity to monitor, or even identify, the helicopter used to transport Elian from the Watson Island Heliport (in Miami) to Homestead ARS, and then from HARS to Washington, D.C. News media reported that Elian spoke to his father by telephone during the flight from Miami.

Local PD and FD is active, along with Federal Protective Service watching over the various federal properties in Miami. The news media have also mentioned the presence of the U.S. Justice Dept. Community Relations Teams being in Miami, along with on-air speculation about pre-raid surveillance teams in the crowd or from remote locations. No joy on any new freqs at this time.

Of interest to the "Ops" types is the scenario used: the family was reportedly "on hold" via telephone with the U.S. Attorney's Office, after all-night discussions about a resolution to the custody battle, when the raid occurred. As such, everyone was dressed and awake at 5:15AM in the house...and probably exhausted. In hindsight, quite a nice "containment" effort and just about perfect timing to avoid large crowds and potential violence. This is not an editorial comment about the extrication, just an observation about the mechanism.

As of now, 1PM local, it's mostly a local PD problem and news media field day. The federal response has switched to D.C., and I'm sure the group up there will have plenty to listen to. As a "technology note," the still photos that are being shown worldwide from the photographer inside the house (one of which is surely going to be an award winner) were immediately downloaded and printed...the crowd outside the house had copies of the photo within a couple of hours after the raid.

Robert Wyman (with help from other unnamed people!)

825. Communications Error (?)

Yahoo group: chattradio
Date: 2000-04-29 23:36:35 UTC
From: LFDGAJR@aol.com
Topic: 825 Message: 825

I have recently started using my PCR100 on a "dedicated" computer. When I was running it on the family computer (a PII 333 MMX, w/32MB ram) I never had a problem. But now that I have started running the radio on this new system a Pentium 100 with 32 MB ram I have starting having an error message saying that the software is unable to communicate with the radio and that the program will be shut down to protect the radio. This occurs after anywhere from 15 to 20 minutes of use. I have tried everything I can think of to fix this problem. I am using TalkPCR version 2.4 and the iCOM software. I have tried setting the COM port flow control to Xon/Xoff as well as Hardware. It has occurred both times. Could someone please help me with this problem or give me some recommend COM port settings that might fix the problem. I am using DB-9 COM 2 port.

Thanks in advance,
Christian KF4ZMB

Topic: 826 Message: 826

Do you have any heat (inadequate ventilation) problems (see below) or have anything running in background on taskbar or have any energy saving stuff on (try with "always on" settings)? It maybe trying to go into suspend/standby mode. Also u might try disabling the power saving stuff that might be located in BIOS. Reason is is that it's doing it around 15-20 mins after u start it, right? What is happening on your computer right when it messes up?
I noticed on the web page that it states it will run on win98. are u trying to run it on win98se? It also states win95 but doesn't state win95b (USB support). Don't know if that might be the problem or not.

Might also be the computer Power Supply getting old or overheated;
See if the PS fan is dirty, if so blow the dust out in PS (you'll need to take the PS cover off), might help stabilize the voltages. Some "problems" can be due to power supply overheating and messing up the critical voltages to motherboard. It happened to me when I was troubleshooting an AMD/VIA system I was working on. Dust acts as an insulator on heatsinks thereby not allowing the airflow to cool them enough. Also while you are at it, check the airflow direction on the PS fan- make sure it is exhausting out of the computer case, not blowing in. If it blows in then it blows the heat from the PS into the case toward your other stuff heating them up even more, causing even more heat-related problems. This applies to any system. Old systems originally had the PS fan intaking and not exhausting, then was changed with ATX form factor.

This is just brainstorming considering I can't see the system! Hope it helps!

830. PCR100 Software

Yahoo group: chattradio
Date: 2000-05-01 04:41:34 UTC
From: LFDGAJR@aol.com
Topic: 830 Message: 830

Can anyone give me a list of computer control software that supports the PCR100. I am specifically looking for software that will allow more than 50 channels at a time (such as the iCOM "what were they thinking" software), but if you know of any software please list it. I am currently using TalkPCR version 2.4 but have had a problem with it causing an error which is not caused by the iCOM software. I have tried to receive information about this problem but nothing I have tried thus far has worked I sent an email to the author but haven't received anything back yet.

Thanks for you help,
Christian KF4ZMB

832. RT Systems Out Of Amateur Radio Business

Yahoo group: chattradio
Date: 2000-05-01 11:56:34 UTC
From: Scott Medlin
Topic: 832 Message: 832

While on a family trip to Huntsville this weekend, I drove by RT Systems only to find a note on their door stating that they have gone out of the amateur radio business. Their inventory has been sold to Amateur Electronic Supply. A moving van was there loading the last of their inventory. RT Systems will apparently continue to develop and support radio software. Notices appear on both RT Systems' and AES' web sites at www.rtsars.com and www.aesham.com . Best of luck to Rod and Karin, they'll be missed at all the regional hamfests.

833. Georgia Station to Station Freq

Yahoo group: chattradio
Date: 2000-05-01 13:56:35 UTC
From: David Cannon
Topic: 833 Message: 833

In years past, stations would use what is known as Sheriff's Band (154.905 & 154.935) to communicate with other departments and mobile units. It seems that these days the "Sheriff's Band" is very quite.

I have searched various sources and can't find any other frequency that departments may be using in lieu of these.

In particular, If Dade County needs a Trooper to work an accident, in the past Dade would contact Lafayette on 154.905. This doesn't appear to be the case now.

Does anyone know how stations are contacting each other now?

Thanks,

David

big_gunx@... writes:

<< Does anyone know how stations are contacting each other now? >>

I do know that 154.905 and (I believe) 154.935 are being used by the GA DOT Enforcement people at the weighstations at least in Ringgold on I-75. This may count for the decreased traffic from other agencies in this area. Just a guess. I have heard Catoosa 911 contact GSP Dalton on 154.935 recently. Also I used to dispatch for Fort Oglethorpe PD. When we needed to contact Catoosa 911 (or vice versa) we had a direct connect telephone. Pick up the phone from our end it would ring Catoosa, they pick up their end it would ring us. From time to time though Catoosa 911 would contact us on 155.370 the intercity frequency. Its possible that other agencies are using direct phone connections to handle the traffic that used to be handled on the 154.935 and 154.905 frequencies. And in the event that they don't they use another frequency such as 155.370 for Catoosa and Fort O.

Hope this helps,
Christian KF4ZMB

836. PCR100 Error Solution

Yahoo group: chattradio
Date: 2000-05-01 19:34:54 UTC
From: LFDGAJR@aol.com
Topic: 836 Message: 836

Up until today the problems I had been having with my PCR100 (losing communications with the computer) had only been occuring when I was using the Talk PCR software but today while using the iCOM software the same thing happened. So, thinking that there might be a problem with the radio, I called tech support. They told me to disable the power saver functions on both windows and my bios. This had already been told to me by David on the [chattradio] list and I thought I had performed this procedure with no success. The tech guy told me that this was the only advice he could give me over the phone. Well I came over to the computer and checked again and apparently I hadn't saved the power features after changing them so I did it again and things are working fine now. So a big thanks to David for his help. And a big thanks to everyone that helped me with this problem. BTW I also unclicked the FIFO option on the port properties screen. While this did not stop the problem it did make the amount of time the program ran before a goof up a few minutes longer (not really sure why, but oh well it did). Once agin thanks to everybody that helped and maybe this information can benefit someone else.

Also I found out that the PCR100 has the tendency to lock up on a signal that is just barely cutting in and out of squelch. Thought I'd pass this along.

Thanks again so much,
Christian KF4ZMB

838. Chattanooga Animal Services officers

Yahoo group: chattradio
Date: 2000-05-02 02:22:53 UTC
From: Matthew Sadler
Topic: 838 Message: 838

Chattanooga has now fielded its new Animal Services division, and consequently they have to have radios.

They are NOT on the Humane Society frequency of 39.58 MHz. Instead, these officers have 800 MHz radios and can be heard on the standard CPD talkgroups. I've already heard them and seen them in my neighborhood hunting strays (finally - my tax dollars at work!).

844. Thank You CARC

Yahoo group: chattradio
Date: 2000-05-02 20:01:38 UTC
From: Larry Van Horn (Monitoring Times)
Topic: 844 Message: 844

I just sent this note off to the CARC and wanted to share it also with members of this fine group. April 15th is a day I will long remember.

BT

I just wanted to take a second of your time to thank the Chattanooga ARC for their time and patience in setting up and running the VEC session on April 15th. Each of your VEC folks performed above and beyond the call of duty that day and should be commented by your club members. Even though I am not a member of the club, I was received warmly and professionally by the entire team and I sincerely appreciate their efforts. It will be a day I long remember where I was and who upgraded me to the ranks of General class hams.

Thans to each of you and the Chatt ARC for your kindness and time to assist the rest of us. The 2 hour trip from Brasstown to Chattanooga was a joy and experience I will not soon forget.

73

Then why don't you just unsubscribe from the list? This stuff just isn't
"sent" to you you have to be subscribed to the list. If you aren't
interested then just unsubscribe its that simple.

Most excellent! Might want to reenable the FIFO if your com port has a 16550 or higher UART chip. more throughput if enabled. It's a buffer system, I believe. also check in "Device Manager" on your com port entry make sure its set to "hardware" and also the bps rate is set to max of UART- 115200bps for a 16550 UART. By default windows sets it to 9600 which may be too slow for the radio don't know for sure- what does your radio documentation or tech support say about that?
Did the squelch problem also show up on your pII system? Might ask tech support about that! also are you using latest version of both software TalkPCR is at v2.4 now for Win2000---
http://www.mahy.demon.co.uk/TalkPCR/TalkPCR.htm
also some of the websites i checked out about the software mention newsgroups but not which ones- Doh! Heck I'm almost sold on the unit(s)

Subject: [chattradio] PCR100 Error Solution

Up until today the problems I had been having with my PCR100 (losing communications with the computer) had only been occuring when I was using the Talk PCR software but today while using the iCOM software the same thing happened. So, thinking that there might be a problem with the radio, I called tech support. They told me to disable the power saver functions on both windows and my bios. This had already been told to me by David on the [chattradio] list and I thought I had performed this procedure with no success. The tech guy told me that this was the only advice he could give me over the phone. Well I came over to the computer and checked again and apparently I hadn't saved the power features after changing them so I did it again and things are working fine now. So a big thanks to David for his help. And a big thanks to everyone that helped me with this problem. BTW I also unclicked the FIFO option on the port properties screen. While this did not stop the problem it did make the amount of time the program ran before a goof up a few minutes longer (not really sure why, but oh well it did). Once agin thanks to everybody that helped and maybe this information can benefit someone else.

Also I found out that the PCR100 has the tendency to lock up on a signal that is just barely cutting in and out of squelch. Thought I'd pass this along.

Thanks again so much,
Christian KF4ZMB

"Police Call" lists 17264 as fireground 3. I have never personally
heard this one active. "Police Call" also lists 16400 as a city-wide
dispatch channel, and I've never heard anything there either.

It said 38400 bps for the serial port speed. I will set it to hardware, and
the radio doesn't have the squelch problem when CTCSS is enabled.

Once again thanks for your help,
Christian KF4ZMB

Thats odd about the CTCSS. might want to ask the newsgroups or tech support about that one! sounds like a bug in the radio system! that is if it did the same thing on the pentium II system?! <shrugs>

853. >>> Destructive 'ILOVEYOU' computer virus <<

Yahoo group: chattradio
Date: 2000-05-04 17:52:25 UTC
From: Dewey Bryant KD4EHC
Topic: 853 Message: 853

Destructive 'ILOVEYOU' computer virus strikes worldwide

May 4, 2000
Web posted at: 10:51 AM EDT (1451 GMT)
By D. Ian Hopper
CNN Interactive Technology Editor

(CNN) -- On Thursday, saying
"ILOVEYOU" was especially hard to do.
A self-propagating computer worm has
infected government and business
computers in Asia, Europe and the
United States.

The virus was first reported in Hong Kong, spreading through Microsoft
Outlook e-mail systems and through a popular Internet Relay Chat program.

Two anti-virus companies, Symantec, which makes Norton Anti-Virus, and
F-Secure, have posted "virus definition" files for the "ILOVEYOU" virus. Those
files have so-called "fingerprints" for the virus, allowing those programs to detect
and eliminate it.

The virus is "widespread" at the U.S. Senate computer system,
according to Elizabeth McAlhany of the Senate Sergeant At Arms office.
Every Senate office has been paged, alerted them to the virus.
The Senate's internal e-mail system was shut down.

Effects are minimal at the House of Representatives,
although "hundreds of thousands" of copies of the virus were deleted,
according to the Committee on House Administration which is
overseeing the defense efforts.

"By all looks, it doesn't appear to be too bad,"
Jason Poblete, a spokesman for the committee told CNN.
"No one knew it was coming. But we won't know about
permanent technical damage until it's over," he said.
The House e-mail system is still operating, Poblete said.

Britain's House of Commons was also hobbled by the virus.
"I have to tell you that, sadly, this affectionate greeting contains a virus which
has immobilized the House's internal communication system",
said House leader Margaret Beckett.

In Hong Kong the virus appeared late in the afternoon, and is reported to have hit
public relations firms and investment firms particularly hard.
Dow Jones Newswires and the Asian Wall Street Journal were among the victims.
In Europe, the virus reached European parliaments,

big companies and financial traders early Thursday.
Officials at the Norwegian anti-virus company Norman said they first heard of the virus around 10 p.m. CET.
"The virus first showed up on my desk one hour ago", virus analyst Snorre Fagerland at Norman told CNN Norway.
"Usually we get a few days notice until the virus reaches us, thus this virus seems to be very aggressive."

In Denmark, the TV2 channel, the telecom company Tele Danmark and the Danish parliament were all victims.

Security experts at F-Secure have analyzed the virus thoroughly. Users usually get an e-mail, sometimes from someone they know, asking them to check the attached "Love Letter." That file is a VisualBasic script, which contains the virus payload. As long as the user deletes the e-mail without opening the attachment, their computer is safe from harm. Once a computer is infected, the virus transmit itself through e-mail using Outlook's address book.

"What makes this virus so much more aggressive than Melissa is that this virus sends copies to all the addresses, whilst Melissa only sent copies to the first 50 addresses," Fagerland said.

The virus can also travel through the Internet Relay Chat client mIRC, according to F-Secure, which has analyzed the malicious code.

Unlike the "Melissa" virus, which traveled in a similar fashion, "ILOVEYOU" is more destructive. First, it copies itself to two critical system directories and adds triggers in the Windows registry. This ensures that it's running every time the computer reboots.

The virus then starts affecting data files. Files associated with Web development, including ".js" and ".css" files, will be overwritten with a file in the VisualBasic programming language. The original file is deleted. It also goes after multimedia files, affecting JPEGs and MP3s. Again, it deletes the original file and overwrites it with a VisualBasic file with a similar name.

The beginning of the virus code indicates a possible origin. In comments, the virus is signed by "spyder," and contains an anonymous e-mail address and a company name. It is also signed "Manila, Philippines," and with the comment, "i hate go to school."

Taking a lighter view of the virus, British Commons leader Beckett said she did not know whether to be "sorry or pleased that as far as I'm aware, I have not received an e-mail saying 'I love you.'"

Morton Overbye of CNN Norway, CNN producer Ted Barrett and Congressional Correspodent
Frank Black contributed to this report.

854. New Updated NASA/Shuttle Freq List

Yahoo group: chattradio
Date: 2000-05-08 12:39:33 UTC
From: Larry Van Horn (Monitoring Times)
Topic: 854 Message: 854

Howdy all,

For many years now, maintaining an up-to-date and accurate NASA/Shuttle frequency list has been an ongoing project for me (try passion). Bob Grove introduced the first list of this kind back in 1982 when Monitoring Times first started and it was an instant hit. I did several updates in the late 1980s in the Federal File/Utility World columns. In 1995, I provided a long needed update as a handout in one of my forums at the Grove Communications Expo in Atlanta. It was subsequently updated again at a shuttle launch and published in both Satellite Times and Monitoring Times. Since then we have made it available to monitors worldwide at no cost on our website.

I have just had our webmaster place on our website a completely updated NASA/Shuttle frequency list just in time for this week's launch. The list includes new freqs for KSC/CCAS/PAFB (FL), Edwards AFB (CA), NASA Centers nationwide, and NASA HQ (DC), as well as a first look at the new NASA Motorola Astro trunking freqs at KSC. :-(This list starts at 1320 kHz and runs well past 1.5 GHz. There is something here for everyone (HF ute enthusiast, scanner buffs, satellite buffs, amateur radio operators, and civilian-military-government monitors).

We have also started a section in this list for amateur rebroadcast relays of audio that is based on hard info, not an old 1997/98 list like you see passed around on various newsgroups.

Best of all this list is free (we do it as a public service to the hobby). So run off to the Grove website and check out the best NASA list on the planet (the NASA KSC freq managers must think so since they have a link to our list and no other on the web on their official website) and get rid of that old, out of date NASA list that keeps making the rounds on email everytime the shuttle goes up.

73 all and good hunting all,

Larry Van Horn

855. new radios

Yahoo group: chattradio
Date: 2000-05-10 14:45:32 UTC
From: Dewey Bryant KD4EHC
Topic: 855 Message: 855

new radios
from:
http://www.strongsignals.net/htm/newsflsh.htm#050300

Uniden BC780XLT

500 channels (10 banks of 50 channels)
7" Wide 2" High
Frequency coverage: 25-512, 806-1300 (excludes cellular)
Trunktracker III:
Motorola (Type II: 800, 900, UHF, VHF)
Motorola (Type I: 800)
EDACS (Ericsson) (800, 900)
LTR (Johnson)
I Call (Emergency Alert)

Alpha-numerics: 2 lines of text for channel and bank names
CTCSS and DCS: tone decoding and tone search/find
VFO Knob
10 Search ranges (can be searched contiguously) with alpha
tag names
Computer control, cloning, and Smart Scanner (R)
Menu driven keyboard (backlit)
Service Search (includes CB with CB channel #'s)
Weather Alert with S.A.M.E and storage of up to 15 FIPS codes
Attenuate: individual channel
Control channel only mode for trunktracking
(enter only the Control channel and it figures out the rest)
Auxiliary mode for individual channel recording
Status Bit and Squelch Detect for Motorola trunking
Delay: 0, 1, 2, or 4 seconds (individual channel)
AM/FM/WFM modes selectable per channel
Beep alert (any channel)

7.5 kHz step size - useful for FCC refarming of 15 kHz bands
Direct frequency input for pseudo-VFO (like the SC200)
Volume mute function
Lockout review function
Delay function will have a HOLD feature
(don't resume scan/search until instructed)
PAUSE feature
(resume scan/search after N seconds even if signal still active)
CTCSS - supports "standard" 38 tones
DCS - select from 100 tones
Emergency Alert function which notifies you when a user on a
trunked system issues an emergency signal

I-Call function for Motorola 800/900 systems to automatically
track by only progamming the control channel frequency
10 search ranges which will allow the last 5 to be chained or
linked together
Memory banks, memory channels and trunking IDs, search
ranges can be alpha-tagged
While searching, tone functions allow for any tone, just one
tone, or any but one tone to be searched for on active signals
10 Service Search banks: Public Safety, Marine, Air, Rail, News,
TV Audio, Family Radio, CB, Ham and Special
Repeater offsets for the REVERSE function will be programmed
for the 420-512 and 806-940 MHz ranges
Includes AC adapter, telescoping antenna, mobile wire antenna,
direct wire power cord, cigarette DC adapter, mobile mounting
bracket, PC interface cable

Uniden BC780XLT Menu System
There are 4 menu categories and the radio is menu driven. Many of
the keys take on different functions depending upon what menu you
are in (similar to many cell phones) and the display will clue you as
to what functions the buttons take on.

The four categories and their sub-functions are as follows:

1.SYSTEM
Dimmer LCD
Screen Mask (takes out data)
Key Beep
Enter Lock
PC Control (2400 4800 9600 19200 baud rates)
Cloning
Smart Scanner
Flow Control (for a scanner aficianado)
Dial Tone/Pulse
Data Skip
Bank Tag
2.CHANNEL
Alpha Tag
Delay (0,1,2, 4 seconds or HOLD)
Lockout
CTCSS/DCS
Beep Alert
Steps
Mode (AM/FM/WFM)
AUX recording
Attenuate (individual channel)
Select Key (VFO knob)
3.TRUNKING
Trunk Type Mot: Type II 800,900,VHF,UHF; Type I 800;
EDACS: 800,900; LTR; ICALL
Emergency Alert

Status Bit
Squelch Detect (Motorola)
Control Channel only mode
Delay
Beep Alert

==========
RadioShack PRO-2067
Back on March 28, I posted a surprised finding about the upcoming GRE-made RadioShack PRO-2067 (Model 20-196). A quick peek at an early draft of the Owner's Manual confirms it will be a mobile version of the PRO-92 complete with four line LCD, frequency range and trunk-tracking capabilities (which run a good chance of being new and improved). It will also be DIN-E sized for standard dashboard mounting. Having been FCC accepted back in January, I would hope to see this new model soon!

==========
RadioShack PRO-89
Another upcoming GRE-made RadioShack model is the PRO-89 Racing Scanner! Model #20-514, it will have the usual 200 channels and typical GRE handheld coverage (29-54, 108-174, 380-512 & 806-960).

Also included are a 5 bank Service Scan including fire/police, air, ham radio, race car, and marine. 7 pre-programmed NOAA weather frequencies are standard as is weather alert (non-S.A.M.E I believe). The 89 will also have duplicate frequency check, direct search, 50 search freqeuncy lockouts with review, power saving circuit and come with two antennas (like its predecessor, the PRO-74)

Audio output is rated at 190mW on batteries and 240mW using external power while current drain (squelched) is 75 mA. Dimensions are 5.7" high, 2.5" wide and 1.4" deep. Like the most recent RadioShack models, it will come with both regular and rechargeable battery holders for the needed 4 AAs

Icomreceivers.com is the new site you want to visit to download memory channels for your ICOM computer programmable receiver. It's free, it's fast, and it's easy!

Just specify the database parameters of one or more of the following: zip code, city, county, state, radio service, frequency range, company, and many other combinations for the frequency information you want. The site will process specific requests and create an ICOM ICF file in a correct format for a chosen receiver.

The user can download the file to his or her own computer and then, with the ICOM programming software, will be able to clone the data to an ICOM receiver.

The online database has a huge number of frequencies sorted by many different parameters, most importantly by geographic location, frequency range and type of radio service.

The IC-PCR100, IC-PCR1000, IC-R2, IC-R10, IC-R8500, and IC-R75 are supported on the site. Future ICOM radios will be added as well. Soon to come, the all new IC-R3!

It is now easier than ever to find active frequencies, whether you're planning a trip or want to find out more of what's on the airwaves around your home! Visit our exciting new site today at http://www.icomreceivers.com

863. Base and offset for Marshall Space Flight Center trunked system

Yahoo group: chattradio
Date: 2000-05-28 00:36:11 UTC
From: Jim Knight
Topic: 863 Message: 863

I visited Huntsville, AL recently and successfully programmed my BC245 for the trunked system at Marshall Space Flight Center. The frequencies are listed several places on the net, but here they are for completeness: 409.55, 408.75, 407.95, 407.15, 406.35. I had not seen the base and offset frequencies listed anywhere. I used a base of 406.35 and an offset of 25 KHz and followed the talk groups with no problems.

I think I can make some educated comments on this one --

It's the Collegedale Car-to-Car channel, does the same purpose as their old 400 Mhz radio frequency 462.550 does.

More information on their configuration. Where as with the HCSO cars, they pulled the old radios and installed the new ones with replaced antennas for 800 mhz, in Collegedale, they pulled the CB radios and added the 800 mhz radios and additional 800 mhz antennas. The reason is that Collegedale owns the 462.550 frequency and not HCSO and they still wish to use it and keep it.

The comment going back to the 400 radio was probably made last Saturday evening when the bad weather was moving this way and the Collegedale PD configured the Collegedale Seventh Day Adventist church for easiest, most expedient exiting possible. One reason they use the 400 mhz frequency they own is that Southern Adventist University can transmit to them on that frequency as it is an industrial business channel and not officially a police frequency. There was a large yearly meeting this past Wednesday night through Saturday night on the campus of Southern Adventist University which includes the Collegedale church, therefore there was a large number of people here. They most likely were using 400 mhz (462.55) as the campus security can communicate with them if needed. It's basically low power, car to car and such. The talkgroup you mentioned was the only new one added as far as I know when Collegedale went to 800 mhz a few weeks ago. They still are on 19568 for dispatching (HCSO-East).

Hope this fills you all in better -- yes, they have both the old 400 mhz and 800 mhz as they still have a 400 mhz frequency they use for coordinating special events with SAU (the university, a big piece of Collegedale, next to McKee Baking, of course!)

Interesting. I guess they wanted something a little more hush-hush (limited range) than the collegedale 800 TG would have afforded them. SAU Campus Safety (ie security) uses 464.575 mhz, and has transmit/receive on 462.550 as well. They can receive (only) 460.050 for the HCSO channel 1 broadcasts, which does them no good now both Collegedale and HCSO have gone to 800 mhz. Besides campmeeting (which just ended), other events which cause them to "get together" on a mutual interest frequency include graduation (first weekend of May usually), SonRise (Saturday before Easter Sunday), and the Symphony Guild Flea Markets that occur either two or three times a year. All of those cause some traffic direction and crowd control necessary. Oh, and possibly the Christmas Tree lighting in December as well. I think I have caught all such occasions.

As far as I know they leave both radios on and pick up the mic on whichever they want to use - leaving the 400 mhz radio on channel 5 - the old UHF "Collegedale" channel.

New question -- when will hamilton county phase out the old system since it is not in their cars?

Also, listening to 21200, it appears to be the Hamilton County Jail Transport TG. All I seem to hear for the most part is transports of prisoners from Moccasin Bend to the Jail and also to/from Erlanger hospital for medical care. What is strange is the jail appears to still use 460.125 internally. Now this may make some sense since the cars do not have 400 mhz radios in them, but I wonder if the jail is planning to change eventually?

I think that's going to be pretty hard. 462.55 is in the General Mobile Radio Service, also known as "UHF CB". It's under Part 95, the same as Class D CB.

All non-private users were supposed to be relocated years ago, however certain licensees were allowed to keep thier licenses as long as they only renewed them: ie, they could not modify or transfer them.

If they are still on this frequency, maybe they are doing it without a license...?!?!

I understand your point, and it is well taken, but they do have a license and it was licensed under IB, industrial business in the common frequency lists. When I asked the public safety director, Bill Rawson, about why this was done, part of it was there were no other frequencies available at that time in this area. The fact the school can access it for special events is a bonus of the way it was licensed. They too are on an itinerant frequency (464.575) if my memory serves me correctly. The Village Market in Fleming plaza also owned by SAU is on 464.550 as is the AW Spalding Elementary school, another SDA institution. The summer day care program operated by the church here is on 154.570 and their yearly campmeeting gathering we had last Wednesday-Saturday was on 468.2125 for their security and operations.

As long as they renew it, they can keep it is my understanding, plus I do not hear many other users on it, so far, none.

Topic: 871 Message: 871

[T2] Digest Number 216
BC245XLT sale at Sears
Tues 31 May 2000

This may be old news, but Sears stores are currently selling the BC245XLT for $179 until they sell out. The rep at our local Sears said they will no longer be carrying the TrunkTracker after they sell current stock, so they will not be able to order one if they are out already.

We checked two stores here in Maryland for any of the newer units without the dreaded 5-sec delay but found only the older units. Some stores got new shipments in as late as last week though before this close-out started, so maybe you'll find one with the newer firmware. (In spite of Uniden's claim that they don't exist...)

I'd be interested to know if any one finds one there!

It was $199 when I was at Sears last night. No idea on available stock or how recent they are down at Hamilton Place Mall.

They're still legal. I did some research and found a GMRS license for them on the 462.550 frequency.

Their callsign is KAE0551. It's a strange callsign because it is a GMRS license. It expires 1/31/2001, according to the FCC's web database.

The FCC database is at http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts . EXCELLENT little resource. Some quirks, but it's a government thing, so that's to be expected.

874. major solar disturbance

Yahoo group: chattradio
Date: 2000-06-08 01:38:09 UTC
From: Dewey Bryant KD4EHC
Topic: 874 Message: 874

Date: 2000/06/07 09:09
Many of you may remember March 13, 1989 when geomagnetic storms from solar flares cause power blackouts around the world and disrupted communications services. On June 6th two spectacular X-class solar flares occurred in
close succession.

A geomagnetic storm alert has been issued for June 8th and 9th, 2000. This storm has the potential to effect power systems, communications systems and global positioning systems. The 800 MHz radio system along with your

other radio and paging systems could see increased radio static and possibility reduced coverage from this geomagnetic storm. Satellites and satellite communications systems have the greatest potential to feel the effect from these storms.

The June 6th solar flares were associated with a "full halo coronal mass ejection" which means a huge cloud of material was ejected in the direction of the earth that can cause geomagnetic disturbances in 2-4 days. This cycle of increased solar flare activity is expected to continue through the summer of 2000. More information is available at

From: Larry Van Horn (Monitoring Times)
Topic: 875 Message: 875

Howdy all,

We have several new things for your monitoring pleasure on the Grove website. We have my March Milcom column devoted to the aerial flight demo teams schedules and freqs. Take a look at http://www.grove-ent.com/airshow.html. We have a new propagation page off the main home page as well as a link to our updated shuttle monitoring page. Of course, we have everyone's favorites our free MT Frequency Exchange and MT Reference Library pages loaded with goodies linked off of the MT home page. And we have the MT Chat board where you can interface with the MT/Grove staffs and others in the radio world. And it is all free to you folks as a way of saying thank you for your continued support of us and the radio hobby.

Also watch for aurora cx tonight. Two bg big big X-class flares have popped since last Tuesday. Tonight and tomorrow night could be spectacular events in our northern skies as well as interesting VHF/UHF Au listening cx.

73 all and good hunting,

Larry Van Horn

856-860.2125, 856-860.4625, 860.7625 and 860.9626 are used for the trunked voice rotation which I believe you are asking for.
the rest of the system freqs. are
856-859.7625 used for phone patch
and 856-858.9625 are data only
and 859.9625 is for Chattanooga SWAT 2 which is a low-power simplex channel.

-------- Original Message --------
Subject: ICOM America Website Updates
Date: Thu, 15 Jun 2000 18:37:00 -0700
From: icom@...
To: shooter2@...

ICOM America's recently added a few useful features to its Website that hams are sure to like: new U.S. amateur band charts and a U.S. grid square map that includes Alaska and Hawaii. Both are offered in downloadable PDF format. We've also added more information on the very popular IC-756PRO and, just for fun, a cool Work the Magic screen saver.

The U.S. band plan features a nice, easy to follow layout of the VHF/UHF and HF amateur bands. On the back is info on country prefixes, Amsat satellites,and band plan frequency assignments. See it now:

http://www.icomamerica.com/amateur/band_charts/bandchar.pdf

The U.S. grid square map offers the best looking amateur map ever! Alaska and Hawaii are included. Additional information on how to use the chart and when the major contesting dates occur each year is printed, too.

http://www.icomamerica.com/amateur/band_charts/usgridsq.pdf

For the IC-756PRO there's now a presentation on what makes this radio such a breakthrough in amateur radio technology. The presentation may be viewed directly in most browsers, or may be downloaded for viewing in PowerPoint(R) program or on a PowerPoint Reader. Take the tour!

http://www.icomamerica.com/amateur/hf/756propresentation.htm

Afterwards, take a walk on the tech side by reading up on a IC-756PRO Advanced Operating Guide written by Icom America's chief engineer. It's a downloadable Word(R) document.

http://www.icomamerica.com/amateur/hf/IC-756PRO.doc

And just for fun, we've put a cool new screen saver up for anyone to download. Work the Magic. Amateur radio IS like magic.

http://www.icomamerica.com/amateur/magic.html

Look for a massive redesign of our Website over the next few weeks. We'll be offering more features and information than ever!

ATTENTION NEW U.S. GENERAL CLASS HAMS! Did you notice that ICOM America is offering a special $25 savings on its new IC-718? If you are new to the HF bands, this easy to use rig offers some big rig features that can help make that jump an easy one. Link today for details:

http://www.icomamerica.com/specials/amateur

LAST CHANCE ON SOME GREAT SAVINGS. Time is running out on some valuable ICOM America special savings. Save $200 on the super-popular IC-746 HF/6M/2M base rig, and save $30 on the equally-popular IC-2800H dual band mobile rig. Link for details:

http://www.icomamerica.com/specials/amateur

Have a great field day, and we'll see you soon on our new Website!

885. interference warning

Yahoo group: chattradio
Date: 2000-06-17 11:34:16 UTC
From: Jim Knight
Topic: 885 Message: 885

The other day while exploring the low VHF bands I started noticing a strange "pip pip pip" signal at different frequencies. The first one I found was at 50.0 MHz, the second at 51.0 MHz, etc. The signal was present with various strengths at almost every even MHz from 20 to 65. The strongest signal was at 40.0 MHz. It was best heard in sideband mode. It sounded like a slow "pip pip pip" with an occasional break to send a CW charcter or two (I heard N's, R's, I's and other letters). I figured that since it came in on so many frequencies, it had to be local. A moment's thought reminded me of what I had running in the house that had not been there very long - a Midland model 74-200 weather radio with SAME decoding. I went and unplugged the power cord out of the back of the radio and the signal strength dropped dramatically but the signal was still there! When I removed the memory backup battery the signal stopped. The power cord must have been acting as an antenna, helping radiate more of the signal. SO, if you have one of these weather radios you may want to disable it during monitoring sessions. I don't know if any other Midland weather radios create the signal, but I guess with a microprocessor running to watch for the SAME codes and no shielding on the radio, it's likely. When you take out the backup battery the radio will retain the SAME codes you have programmed, but not the time and date. A small price to pay for quieter monitoring, right?

From: Matthew Sadler
Topic: 887 Message: 887

I remember a few months ago I'd noticed a bid notice in the newspaper, from the city of Soddy-Daisy for a voting receiver system. Didn't think much of it then, but... I noticed a cellular/PCS tower on Hixson Pike at US 27 in the north end of the city, which had a single ground plane antenna mounted below the cellular and PCS arrays, and there is a rectangular-shaped dish antenna mounted a little higher up, aimed south.

So, I did some searching, and this is apparently one of, or _the_, voting receiver for their police department's 460.250 MHz repeater. The repeater itself is located on the hill SW of Soddy-Daisy High, so the antenna is aligned right. Guess they've installed this for better portable coverage in the north end by the lake.

It transmits back to the repeater on 453.1125. Listen to it yourself.

Teens Taunt Police With Pilfered Radios
Group Caught in Basement After Night of Harassment, Cops Say

June 20, 2000

By Seamus McGraw

AMHERST, Ohio (APBnews.com) -- For nearly five hours, a gang of pot-smoking teenagers allegedly taunted police over a pair of stolen two-way radios, calling the officers by name, cursing at them, threatening them, and bragging that they'd never get caught.

"You're never going to find us," one of them bleated across the emergency channels, police said.

They were wrong. It took harried police from Amherst and Vermillion most of the night to track down the teens with the help of a local ham radio operator. But all six youngsters are now in custody, charged with a raft of offenses under the state's juvenile delinquency act, including theft and telecommunications harassment, Amherst police spokeswoman Barbara Hudson said.

A busy night

The alleged obscene and abusive tirade began around 9:30 p.m. Saturday,

and it couldn't have come at a worse possible time for police in the two communities at the edge of Lake Erie which share an emergency communication network, Hudson said. In Vermillion, police were stretched to the limit patrolling the town's annual Fish Festival, a celebration of the harvest on the nearby lake. In Amherst, most of the officers were fanning through the village of 14,000 looking for a robbery suspect who was later arrested, no thanks to the teenagers, police said.

In both towns, it was essential that communications between police not be interrupted, Hudson said.

But the six boys, all between 14 and 16, had a different agenda.

'I have you in my scope'

Earlier, one of the youths had stolen three hand-held, two-way radios from
the municipal Public Works Department, where he had a summer job,
authorities said.

He had brought two of the radios to the home of a friend, and in the
basement of that house they began their pirate broadcasts, Hudson said.

"They were calling the officers on duty by their last names," Hudson
said.

At one point, one of the boys threatened police.

"I see you, 104," he said, rattling off the call number of a patrol
car. "I have
you in my scope."

Ham operator to the rescue

Frustrated, police turned to the Detroit office of the Federal
Communications
Commission, but it did not have the equipment needed to trace the
broadcasts and would not be able to get it there until early the next
morning,
Hudson said.

Then a local good Samaritan with a ham radio offered his services.

By about 2 a.m., Todd Dunlop had traced the broadcasts to a basement
recreation room in his own neighborhood, Hudson said.

A short time later, police knocked on the door, waking the sleeping
grandmother of the teenager who lived there, and got permission to
search
the house, Hudson said.

They found the youths and two of the stolen radios, and later recovered
the
third at the home of the teenager who had allegedly stolen it, Hudson
said.

Multiple charges

Police threw the book at the boys.

"They jeopardized the safety of police officers for about five hours,"
Hudson
said.

In addition to theft and harassment, the teenagers were also charged
with
possession of marijuana and disruption of public services.

They remained locked up this afternoon in the Lorain County Juvenile Detention Center, Hudson said.

889. UHF intereference problems

Yahoo group: chattradio
Date: 2000-06-26 23:09:07 UTC
From: Dewey Bryant KD4EHC
Topic: 889 Message: 889

Two representatives from Winegard Manufacturing came to Chattanooga Monday 06/19/2000. They came prepared with a spectrum analyzer, yagi antenna and about 35 replacement antennas, which had been modified for lower (15db) gain. We went to one local R/V dealer and found and replaced eight antenna/amplifiers, which were transmitting from 438mhz to 483mhz and drifting up and down the band with spurs in the 900mhz range. Due to time limitations, I don't think we got them all. We then went to three other locations where we had found the amplifiers getting

into our 440 repeaters (one was 11+ miles from my repeater) and replaced
those.

Winegard has been more than cooperative about coming to Chattanooga and

helping find and replace these antennas. The company rep. said the amplifiers were tested at 27db gain at UHF!

Chuck Roach N4WT

After talking with Chuck, there's some more news ...

The replacements worked perfectly with no spurs anywhere. Obviously, they didn't oscillate.

Okay, now the bad news. They have manufactured and distributed over 4 million of these (according to the Wingard Rep) that are 27 DB since 1991. The 11 replaced in Chattanooga has only scratched the surface. We
are still finding even more!

One of them was so bad, that you could modulate it by tapping on the body
of the RV.

Anyway, we are still waiting on more information from Winegard and the FCC as to what is going to happen.

So if you are having UHF intereference problems, or 800-900 MHZ, think about RV dealerships or campgrounds.

http://www.cnn.com/2000/US/06/21/climbers.rescued.ap/index.html

Not bad for unlicensed service. It's a damn good idea to have an FRS
radio in your
bag of tricks. You might not want to use it as your primary
communications device,
but the person you're trying to help may have already made the decision
to use it.
If you're a GMRS license holder, remember you have rights on 7 of the
FRS channels
and can communicate with unlicensed stations EVEN if it isn't an
emergency. I
hope these kids get the reward they deserve for being mature enough to
know that
it wasn't a game.

I agree. And when you consider there are 14 channels and 30+ CTCSS
codes, the hikers were lucky that the kids HAPPENED to be on the same channel
and HAPPENED to have the same code OR had the CTCSS off.

It wouldn't hurt to try and promote a common listening channel,
preferably on one of the channels co-shared with GMRS.

892. More local weather radars...

Yahoo group: chattradio
Date: 2000-06-29 22:30:02 UTC
From: Matthew Sadler
Topic: 892 Message: 892

Just as I figured it, Chattanooga can't have just one TV station with their very own weather radar - this is constant competition...

Channel 3 has made application for their own weather radar on Signal Mountain, just down the road from Channel 9's system.

Frequency: 5530 MHz
Power Output: 250,000 watts

Just to compare, Channel 9's radar is on 5450 MHz with the same power output. 9's will probably do better, though, since they have a little more elevation (unless they desense each other).

Along those same lines, I've been having trouble with some interference, centered right on 147.000 MHz... after unplugging several things in the room here, it turned out to be an HP flatbed photo scanner! Even on my FT-8100, hooked up to an antenna some 15 or 20 feet higher up on the house, it was still there... so, moral is, when all else fails, try unplugging things one at a time.

trunkcom-digest V1 #575

Greetings all,

Just a quick update for all on a couple of new scanners coming down the pike. I talked to the Undien folks today and the BC-780 has still not been FCC type certified. They now indicate late fall at the earliest. Looks like the 780 will be on Xmas list instead of the promised May/June delivery that the Uniden people put out at the CES show. The new Icom R-3 has also not been FCC type accepted. The Icom folks told me they expect to deliver their product to market in the September/October timeframe (probably about the same time frame as the BC-780). So now you have the latest info we have direct from the horse's mouths. ;-)

> major geomagnetic storm and Aurora.

Dave, N0IT
NASA Science News for July 14, 2000

A powerful solar flare on July 14th triggered an
intense radiation storm in the vicinity of Earth.
The eruption was followed by a fast-moving
coronal mass ejection that is expected to strike
Earth's magnetosphere as early as Saturday. The
impact could trigger Northern and Southern Lights
bright enough to be seen in spite of this
weekend's brilliant full Moon. Such a display is
by no means guaranteed, but it is possible.
Observers across the Pacific could be in for a
very rare treat: the sight of shimmering colorful
aurora during the total lunar eclipse of July 16,
2000.

896. Nextel Trunked System

Yahoo group: chattradio
Date: 2000-07-21 00:26:26 UTC
From: Jim Knight
Topic: 896 Message: 896

Does anyone know what's going on with the Nextel commercial trunked system (frequencies and talk groups listed on Matthew's web page http://www.qsl.net/kf4lhp/trunking/comm/nextel.html)?
I no longer hear a control signal at my location and scanning manually through the channels I heard no conversations. Is it temporarily down or has it been abandoned, and what are all the users doing for communicatons?

897. Re: [chattradio] Nextel Trunked System

Yahoo group: chattradio
Date: 2000-07-21 01:06:53 UTC
From: Matthew Sadler
Topic: 897 Message: 897

It's probably been converted to the true Nextel iDEN system that is in operation in other Tennessee metropolitan areas. That was one of the main reasons Nextel purchased the former Motorola systems - to acquire the spectrum. The new Nextel digital system provides "cellular" telephone service, two-way radio, and alpha-numeric paging in one unit.

Some known users include the TDOT HELP trucks and a number of local contractors. One local ISP is using the system, as is a local utility. Whitfield County has also acquired several hundred of the units, but a lot are setup for two-way only (i.e. the telephone function has been disabled).

The users have probably migrated to one of the following:

- Cellular/PCS telephones
- other local analog 800 MHz systems
- Nextel's digital system

898. Improving trunked system reception

Yahoo group: chattradio
Date: 2000-07-22 23:14:22 UTC
From: Matthew Sadler
Topic: 898 Message: 898

Even with the Chattanooga trunked system now having four sites on the air, reception in my neck of the woods is at best spotty, and I didn't tend to monitor the system much because it was quite choppy and full of static most of the time.

Well, I've decided to do something about it, and here's a relatively inexpensive solution. Radio Shack has, for about $32 with tax (tax is at 8.25% here in Chattanooga, your rate may well vary), a mag-mount 3 dB gain cellular antenna. The antenna is only about $25, but add a few more $$ for a female TNC to male BNC adapter. It comes with about 10' of coax cable.

I haven't even set it up outside yet, but just inside the house I'm now getting full-quieting reception... maybe I'll actually start listening to the city system more often, now that it's tolerable. :)

Matt, please forgive me if this is inappropriate for the list.
Did anyone happen to catch MTV Thursday night around 9:00? The show airing was "Scared Straight '99". For those who dont know the premise of the show, "troubled kids" are taken to a prison where prisoners and wardens scare them "straight".

I would like to know how the FCC lets a 'network' catering to teens and pre-teens broadcast language more befitting the late night HBO viewer. Oh yes, there was the "offensive language" disclaimer at the beginning of each segment, but does this allow them to just freely broadcast obscenities? If anyone knows, please enlighten me. For those of you who care about your children, I just thought you should know what they might be watching.
Let's turn Riley loose on them.

904. TDOT HELP Trucks

Yahoo group: chattradio
Date: 2000-08-04 21:15:58 UTC
From: Matthew Sadler
Topic: 904 Message: 904

You may recently have noticed the silence on 159.585 MHz, the repeater formerly used by the TDOT HELP trucks. They have switched and are now using a repeater with an output of 47.360 MHz, located on Signal Mountain near Falling Water.

Not too often you hear of groups moving to a lower frequency system... seems like all I hear now is people moving to 800 MHz system.

Topic: 905 Message: 905

This is rather amazing. Nearly ten years ago, the TDOT migrated from its old low-band system, of which the 47.36 station is a remnant, to its present VHF system.
A large quantity of 60w GE Delta VHF mobiles was purchased, and those are now being put up for sale. I am sure that TDOT does not plan to move their entire communications back to low band, but they kept a few licenses. So many users
left it, that it is not the crowded, co-channel interference problem that it used to be.
The amazing thing about low band, is that propagation is so good, that a station may be heard two counties away, but not ten miles away, depending on terrain. The unusual topographic challenges presented in Southeast Tennessee may have influenced this decision.
Most HELP trucks are equipped with multiple communications systems, and adding the old low band TDOT channels into a modern, synthesised, wide band radio already equipped for THP low band channels is not a bad idea.
I'll continue to monitor the VHF HELP here in Knoxville (156.180/157.500/DPL 155)
but check out the old freqs as well to see what is going on.
Just my two cents.

Since moving from SAU in Collegedale back down to central Florida, I can tell you they are available here too. Not yet tried it though and it is a custom scanner/software for their unique code. Ironically, I used to work in R&D for a company that makes these types of devices, in their software engineering department, it should be interesting if this device can have any *other* uses as well.

913. RF safety rules now in force for all amateurs

Yahoo group: chattradio
Date: 2000-09-02 01:01:54 UTC
From: Dewey Bryant KD4EHC
Topic: 913 Message: 913

ARLB037 RF safety rules now in force for all amateurs

ZCZC AG37
QST de W1AW
ARRL Bulletin 37 ARLB037
>From ARRL Headquarters
Newington CT September 1, 2000
To all radio amateurs

SB QST ARL ARLB037
ARLB037 RF safety rules now in force for all amateurs

Starting September 1, every US amateur is required to fully comply with the FCC's RF exposure guidelines.

The regulations, which went into effect January 1, 1998, require US Amateur Radio operators to read and understand the rules and, where necessary, perform technical evaluations to determine that their stations are compliant with the new regulations. Up until now, only hams who have had to file an Amateur Radio application with the FCC have had to certify compliance with the RF exposure rules. As of September 1, all amateurs must comply.

Under the regulations, an amateur station must not exceed the maximum permissible exposure limits for transmitter operation.

''These regulations are not a major burden on the Amateur Radio Service,'' said ARRL Lab Supervisor Ed Hare, W1RFI. ''Most hams are already in compliance with the MPE requirements; some hams will need to conduct a simple station evaluation.''

A complete description of the rules is available on the ARRL Web site at http://www.arrl.org/news/rfsafety/. The site also contains resources to make your station evaluation quite painless.

Address questions about RF safety and the FCC exposure guidelines to ARRL Lab Supervisor Ed Hare, W1RFI, ehare@....

Trip to Russia,

The "Friendship Force International" is sponsoring
a trip to Russia for Radio Amateurs and people
interested in Communications. The trip will be in
May 2001. If you're interested in "travelling to
Moscow and Saint Petersburg" with this group
go to http://www.mindspring.com/~w4gbu/russia.htm
for a description of the program..
If you're interested, let me know within a week so
we can get more info to you..

915. new talkgroup 21968

Yahoo group: chattradio
Date: 2000-09-05 22:53:41 UTC
From: Jim Knight
Topic: 915 Message: 915

I heard 21968 on the Chattanooga system Monday afternoon. Two brief conversations - one about a parking lot and how far people would have to walk from it and the other sounded like "he set off the motion sensor in the bathroom". Has anyone else heard this one or ID'd it?

Topic: 917 Message: 917

If Soddy Daisy has 21904 -and- 21968, there is a good bet that they also hae 21936 too. These ID numbers are in increments of 32 and the values 1 to 31 added to that value are for patches and other options for the base ID value. Knowing this, it makes it easier to figure where there -may- be something and also what the base value is if some strange one comes up as a patch or something.

While I am no longer in the Chattanooga area (as my address down below shows), I have an interest in the area, maintained notes on it and plan to provide some support via my web page in terms of frequency and trunkgroup data for that region. Of course, central Florida will have a larger amount of data available as I am actually here and there is much more life here.

If you want to check out Orlando, FL PD and FD, my webpage has a link to a direct audio via internet feed for the PD and FD down here. I am not responsible for the service, just the link to get there.

I have no idea when the update will be done, except by Jan of 2001 as I plan to resume work on restructuring it in about a month. Since I will seek some verification help, I will announce here when it is done, along with an express direct link to the chattanooga page for anyone wishing to check it out or verify if it looks correct.

918. Nextel, Motorola vie for guard bands

Yahoo group: chattradio
Date: 2000-09-11 18:54:10 UTC
From: Dewey Bryant KD4EHC
Topic: 918 Message: 918

trunkcom-digest V1 #602
Mon, 11 Sep 2000
//
Nextel, Motorola vie for guard bands

September 11, 2000

WASHINGTON?At the end of four rounds of bidding, subsidiaries of Nextel Communications Inc. and Motorola Inc. were duking it out for the top 15 markets of the guard-band manager licenses.

Meanwhile, Spectrum Innovations L.C. was beaten in the guard-band auction, but apparently was still active, and Access Spectrum L.C. seemed to be going after the 2 megahertz licenses in second-tier markets.

The Federal Communications Commission began auctioning off 6 megahertz of spectrum in the 700 MHz band (TV channels 60-69) on Wednesday to entities that plan to lease the spectrum to private-wireless firms and others. Those companies must deploy systems that do not interfere with adjacent public-safety operations. The 6 megahertz has been split into two licenses of 4 and 2 megahertz, respectively. More than 100 licenses are available.

To date, Motorola Spectrum Inc. made 66 high bids for a total of $18.9 million. Motorola holds the 4 megahertz license for New York City and Nextel Spectrum Acquisition Corp. holds the 2 megahertz license for the Big Apple.

Access Spectrum is the spectrum-purchasing entity formed by Mark E. Crosby, president of the Industrial Telecommunications Association and an ardent advocate for more spectrum for private-wireless entities. Access Spectrum is currently the high bidder for 20 licenses.

Spectrum Innovations is owned by the same people as FreeSpace Communications, which urged the FCC to not restrict the use of the guard bands. Spectrum Innovations had been the high bidder on 54 licenses at the end of round three, but held no licenses at the end of round four.

800 MHz auction

In other auction news, the auction of 800 MHz general category licenses ended Sept. 1 after 76 rounds, garnering net revenue bids of $319.5 million. Nextel Spectrum Acquisition spent $231.5 million to win 800 of the 1,030 licenses sold. South Communications Services Inc., a subsidiary of Southern Co., won 89 licenses for $50.8 million.

Twenty-three licenses were not sold.

The commission also has scheduled an auction of 800 MHz specialized mobile radio licenses, set to begin on Nov. 1

919. Icom IC746 Extended RX

Yahoo group: chattradio
Date: 2000-09-19 04:02:31 UTC
From: Dewey Bryant KD4EHC
Topic: 919 Message: 919

Icom IC746 Extended RX
Before you carry out these mods note your warranty may be void!
Remove top and bottom covers, locate the string of SMD diodes on the main board underneath, there are 14 positions for these diodes but not all are filled, they are near the lefthand side of the main board. You will see that on the far left there are 4 diodes before a space, from the lefthand side remove diode 3 and 4 (this is done with the radio front facing you). You now have 108 to 174MHz RX. Your dealer will do this mod for you if you are worried about warranty problems.

920. Private Station Identification Guidelines

Yahoo group: chattradio
Date: 2000-09-21 12:23:23 UTC
From: Randy Perkinson
Topic: 920 Message: 920

How often, if at all, should a private station identify?

The type of station I'm asking about is a small base station used to dispatch about 10 trucks through a repeater. The station is licensed (I helped them look up their licensing info and call at the FCC web site.) If someone can point me to the specific rule, it would be greatly appreciated.

Now that I think about it, I have never heard a private or public service station identify.

Thanks for your help.

922. new talkgroups

Yahoo group: chattradio
Date: 2000-09-26 22:41:01 UTC
From: Jim Knight
Topic: 529 Message: 922

I heard the following talkgroups active today:

21648 Definitely something to do with water and sewer lines. Heard many mentions of pumps, water level alarms, storm drains, etc.

20400 Appears to be highway paving/maintenance. Heard conversations about trucks bringing their loads, 1000 gallons of oil, etc.

21392 Many key-ups with no audio, then conversations about barricades in the road, parking control, and mention of the Krystal pier. Is this part of the Riverpark?

21360 Janitors or maintenance people at the Police Service center. Heard mention of the annex and various maintenance tasks.

20624 Many conversations about picking people up and taking them places. Many units going 10-7 and 10-8 at Burger King, Chattanooga State, White Oak. Could this be something similar to Care-A-Van (18512)? Note: I heard this one during the airshow in April, but couldn't ID it.

18704 (Disaster 1) This was in use for several hours and sounded like a large group of cars were going somewhere, accompanied by TVA cars.

28108 Not enough to ID (John Pless has heard this one before)
20304 Not enough to ID
18448 "
21872 "
21776 "

If anyone has additional insights to any of these, please post. Thanks!

They are all probably Hamilton County since they are being grouped with what I have so far for HC.
21648 and 20400 Could it be Hamilton County D.P.W.? Is it being simulcast on the old frequencies by chance?

21360 since you mention "annex" could it be Hamilton County Annex Maintenance instead of service center?? I don't know if service center is strictly chattanooga or does it have some county services there also?

21392 Is Riverpark county or chattanooga owned? cause I don't know! It might be Riverpark security/maintenance?

20642 I tend to associate White Oak with county and their fuel. I believe there is a fuel depot there. I've also heard mention of Onion Bottom (also concerning fuel) in the past by EMS. Other then that I have no clue. Escorts/drivers for "VIPs"and "brass"; maybe jail transports?

Wonder what/who was going on on Disaster 1 that day. were you able to tell if the TVA cars had 800 capability. I don't even know what their frequencies are?

Were you able to figure any more out about Soddy PD tgs? I don't have a scanner anymore due to someone "five-finger discounting" me about 3 monthes ago. But I'm still keeping up with what you all get! Hopeing I helped you out some!

Thanks for the clarifications and speculations! I didn't have the old DPW frequencies in scan at the time, so I'm not sure about simulcasting. Most TVA cars don't have radios unless they are TVA police cars.

No problem!
Didn't know that about TVA; would you happen to know what the freqs. are for TVA pd? What I have I didn't hear anything on. Here is what I have:

TVA: 40.500 & 40.620 (work crews), 168.575, 172.425 (digital paging), 172.625 (area-wide), 172.650 (phone patch), 415.025 (sirens), 415.450 (maintenance Chattanooga)

Are they correct and am I missing any? I'm not even sure if they have any area repeaters. They are like THP -I never heard anything on those either unless I was real close.
Thanks in advance!

The TVA police are definitely on 171.75, but 99% of the time it's scrambled. In the rare cases when it's not scrambled they use a PL tone of 110.9 Hz, so if you have a PL capable scanner program the tone in and you won't hear the scrambled stuff. Personally I have not heard any unscrambled traffic for some months now. I think the TVA police are also on 417.85 but I'm not as sure about that one and again it's scrambled most of the time. You might hear power line maintenance activities on 172.625 if you can listen during business hours. 172.65 is used during nuclear emergency drills but gets little use otherwise. Also try 170.075 and 168.375. I'm not 100% sure these are TVA but they're worth a look.

855.9625 should be analog FM voice, according to the license application.
1101 Market Street is the TVA Complex, so I'd speculate that it has
something to do with the TVA Nuclear Preparedness programs and such.

933. SMR industry

Yahoo group: chattradio
Date: 2000-10-10 18:10:50 UTC
From: Dewey Bryant KD4EHC
Topic: 933 Message: 933

Submissions: trunkcom@...
Subject: [TrunkCom] For the traditional SMR industry,
it looks like the game is just about over

In a move that would signal another significant blow
for the traditional commercial two-way radio industry,
Nextel Communications Inc. is said to be planning
to acquire the last major 800 MHz independent operator
in the business, Mobex Communications Inc.

In its latest study, ?The State of SMR and Digital Mobile Radio: 2000,?
the Strategis Group research firm notes Nextel?s recent
purchase of Chadmoore Wireless Group Inc. and reports
\the often-heard speculation that Mobex is the next target.

A high-level official at Mobex refused to confirm or deny
the Strategis report. Nextel did not respond to Wireless Week?s
phone inquiry.

Nextel has built its nationwide cellular-like network on a series of
acquisitions and FCC waivers of SMR rules. It avoided
anti-trust complications through a regulatory interpretation that
considers the dispatch radio business a direct competitor to
cellular and PCS services. Throughout the industry?s consolidation,
however, Nextel faced a formidable opponent in Mobex.
With the rumored acquisition, that appears to be changing.

Because Nextel?s network is built on a patchwork of licenses initially
allocated to two-way radio, the company does not have
sufficient spectrum to compete against cellular and PCS operators in the
future. ?To continue to grow its subscriber base and
offer consumer services as well, Nextel will need to add capacity,?
Strategis says.

The sale of Mobex would represent a major reversal in that company?s
stance toward Nextel. Throughout 1999, the dispatcher
led the industry in a battle to prevent Nextel from consolidating the
900 MHz band in the same way it had consolidated the 800
MHz band. Leading a coalition of operators known as the Alliance for
Radio Competition, Mobex fought Nextel?s efforts to
acquire the 900 MHz licenses of defunct Geotek Communications Inc.

Mobex and its few remaining colleagues in the dispatch business saw the
Geotek spectrum as the last opportunity for rival
operators to compete with Nextel. They tried to persuade the government
to honor a 1995 consent decree prohibiting Nextel
from holding 900 MHz licenses in the top markets before 2005.

?In the game of Monopoly, once a player reaches a certain critical mass of properties, it is very difficult to continue to compete against that player,? the Alliance for Radio Competition told the Department of Justice in a March 1999 letter. ?While the game may continue for a few more turns, the outcome is more than clear.?

Despite their united voice, Mobex and the alliance lost the battle at 900 MHz late last year when Nextel suceeded in having the consent decree modified. Next month, the SMR giant is free to acquire the Geotek spectrum, which has since been purchased by Nextel co-founder Brian McAuley, now doing business as NeoWorld Communications Inc.

For the traditional SMR industry, it looks like the game is just about over.

934. go to web to get your dispatch!

Yahoo group: chattradio
Date: 2000-10-10 18:17:49 UTC
From: Dewey Bryant KD4EHC
Topic: 934 Message: 934

Submissions: trunkcom@...
Subject: [TrunkCom] Local PD responds, go to web to get your dispatch!

well, i got a little ornery this weekend, and decided to email some of
my city's public safety officials regarding the upcoming
Com Net Ericsson digital EDACS system we are switching to.

my questions were straightforward:

Regarding the City of San Antonio's upcoming shift to an Ericsson radio
system for public safety use, will the city maintain it as:

1) a closed broadcast communications system or
2) an open broadcast communications system

With the use of a consumer-level radio-frequency scanner, I actively
monitor the SA Fire Department and Police Department during the summer months to
keep advised of/track of wildfire potential
(I'm in the NW San Antonio area).

Will I still be able to do so with the new Ericsson radio system?
Will the City accommodate "simulcasting" Fire/Police dispatches
on the older UHF radio frequencies if the new Ericsson system is not monitorable
with consumer-level radio electronics?

If not, what resources will be available to allow a resident
of San Antonio to monitor breaking Fire/Police events?

i was a little amazed at the reply from the City's Office of
Communications:

"http://sagweb.ci.sat.tx.us/ixpress/FDWR/FDWR/FDWR.DML is the place I
go to for real time Fire Dispatch."

well, not only is the site strictly fire dispatch, but it isn't always
up-to-date! i've compared events i've listened to with
my BC245 to the postings on the website i was referred to over
different days and only about 60% match up.
the rest are missing from the website!

so, i guess i will need to get a nice laptop, with some
cellular-internet service so i can roam around town hitting "refresh" in
Netscape on this webpage to keep abreast of breaking accidents/fire events.

sheesh...
++++++++++
.....Gee, Wonder if Chatt/Hamco would like to start posting cards of
CAD???

935. New Talkgroup - Chattanooga Fire Fireground 3

Yahoo group: chattradio
Date: 2000-10-24 05:03:27 UTC
From: Matthew Sadler
Topic: 935 Message: 935

Well, fireground 3 certainly came to life this evening, with the city working what could have been an extremely destructive situation with the fire at the Chattanooga Gas Company's facility on North Hawthorne Street... I monitored the whole thing from start to finish, and it was certainly tense for a while.

Comms were primarily on fireground 1 (17200) between the recon team and command with traffic involving all other units on the scene going over to fireground 3 (19472). HCEMS, County Rescue, and city police all pitched in for the effort.

At least there's a nice, big, ridge between me and that place. For once, Missionary Ridge could've proven helpful, instead of just hindering my radio reception.

From: Dewey Bryant KD4EHC
Topic: 937 Message: 937

trunkcom-digest V1 #609

(10-16) 00:20 EDT

WEST COVINA, Calif. (AP) -- Police officials are warning a hacker who goes by ``One Adam 12'' that breaking into police radio transmissions is illegal. ``He usually comes on around three in the morning for a while, then he goes away,'' police Lt. Jess Ward told the San Gabriel Valley Tribune for Sunday editions. ``He uses foul language and says things that aren't appropriate.''

Ward said the hacker has cut into communications for West Covina and Baldwin Park police, and possibly Los Angeles County Sheriff's Department. No law enforcement official would comment by phone on Sunday. ``I'm not sure how he's doing this, because we're all on different frequencies,'' Ward said, adding federal authorities will try to trace the broadcasts.

Baldwin Park police Lt. Raul Martinez said the scanner gadfly is more than just an annoyance. ``We could have emergency traffic where officers are trying to get help to a citizen in need, and if this guy is interfering with that we could be losing valuable time trying to get help to that person,'' he said.

John and the group,

22096 is Lookout Mountain (TN) PD. Addresses they are dispatching cars to as well as the unit numbers match up.

Remember that Lookout Mountain (GA) PD are on the Walker County 155.310 MHz repeater used by all of the municipal police departments in Walker County.

John and the group,

22096 is Lookout Mountain (TN) PD. Addresses they are dispatching cars to as well as the unit numbers match up.

Remember that Lookout Mountain (GA) PD are on the Walker County 155.310 MHz repeater used by all of the municipal police departments in Walker County.

Submissions fedcom@...
Subject: [FedCom] Uniformed Secret Service at Bush Rally

Just caught a shot of a Uniformed Secret Service working the Bush rally here
in Jacksonville,Fl.Does anybody know what freqs they use are they the 400mhz
freqs or do they use the local office freqs.

>snip<

They are on the same frequency as the agent personnel. They don't use the
UHF stuff on the road. These guys provide magnetometer, canine and
counter-sniper support.

948. need scanner freq for clev-bradley cnty

Yahoo group: chattradio
Date: 2000-11-23 18:12:00 UTC
From: DEGUELO@YAHOO.COM
Topic: 948 Message: 948

Hello to all in this group. I am looking for scanner frequencies for Cleveland and Bradley County (plus any surrounding counties). If anyone has these and is willing to post them, I would appreciate it very much. Or, you can e-mail them to me at Deguelo@.... Thanks in advance for your help. I know somebody out there can help!

Thanks again,

Deguelo

From: Steven Bradley
Topic: 948 Message: 949

While I do not have them in front of me, if it helps - they are all VHF in Bradley and Cleveland. I also would appreciate a copy of them as well (if e-mailed, please include me!). I lived in Collegedale for four years while attending SAU. I am in the process of updating my web site and would like to include the Bradley County, Cleveland, and related areas (ie Hamilton) frequencies in the update. I have some notes on Cleveland and Bradley, and probably would recognize the frequencies if I saw them again, but I know they are not detailed as much as the Hamilton systems are. So, please feel free to them to me too, if you have them (Deguelo: if you receive no response, write me privately, and I will hunt up my notes).

Thank you, Steven

My website at http://www.qsl.net/kf4lhp/govtlink.html has info on those localities as well as others. The Bradley County page has recently been updated and an update is coming soon for the Cleveland page.

Also, Lee University campus safety is on 160.140 MHz.

962. FCC enforcement updates

Yahoo group: chattradio
Date: 2001-01-02 07:24:08 UTC
From: Matthew Sadler
Topic: 962 Message: 962

Don't know how many of you are aware of this, but at the R.A.I.N. Report website (www.rainreport.com), Riley Hollingsworth, the FCC's Special Counsel for the Enforcement Bureau gives a bi-weekly report, recorded on RealAudio, of the FCC's amateur radio enforcement actions for the previous two weeks. It's very much worth a listen.

One note he makes in the current log is that starting soon, they will also have an additional log running on R.A.I.N. that will cover the land mobile radio services enforcement actions, i.e. police, commercial, and other such entities. Should be interesting as well.

Topic: 963 Message: 963

Santa must have delivered a bunch of the new FRS handheld radios for Christmas. I've noticed a dramatic increase in activity on these frequencies over the Holidays. They seem to be quite popular with travelers, kids, and mall shoppers. See Matthew's site for frequency details at: http://www.qsl.net/kf4lhp/services.html

964. Direct Radar Information

Yahoo group: chattradio
Date: 2001-01-02 21:37:59 UTC
From: Dewey Bryant KD4EHC
Topic: 964 Message: 964

Subject: Direct Radar Information

The end of NIDS has arrived. For those of you who may not know, NIDS stands for NexRad Information Delivary System. This was a contract for delivary of radar information to the public from the National Weather Service's Doppler radar. This contract has now expired, and you can now get this information directly from the National Weather Service on the internet. You can link from the Morristown address at www.srh.noaa.gov/mrx and go to the radar/satellite link, or www.srh.noaa.gov/mrx/metsat.htm to bypass our home page (but who would want to do that?). This link also has the option to get information from anywhere in the nation.

You might still see a few minutes delay from the product time to the time it is available, but this more direct link should cut down the delay from the radar scan to the availability on the internet. There are several products, and also some loops available on this page.

We look forward to seeing you all again this year and
hope for a safe an quiet severe weather season.

Happy 2001 !!

Howard Waldron, WCM

It uses 14 different frequencies in the 462 and 467 MHz bands. Specific frequencies are listed at: http://www.qsl.net/kf4lhp/services_frs.html .

Mr. Pless can attest to the fact that it was quite popular at Riverbend in 2000, and I know for a fact that some businesses are using it for on-site communications (Ruby Falls, for one).

968. IRIDIUM....still lives !!!!!!!

Yahoo group: chattradio
Date: 2001-01-03 21:00:06 UTC
From: Dewey Bryant KD4EHC
Topic: 968 Message: 968

Submissions milcom@...

Subject: [MilCom] DEPARTMENT OF DEFENSE ANNOUNCES CONTRACT FOR IRIDIUM COMMUNICATIONS SERVICES

MMEDIATE RELEASE December 6, 2000 (703)697-5737(public/industry)

DEPARTMENT OF DEFENSE ANNOUNCES CONTRACT FOR IRIDIUM COMMUNICATIONS SERVICES

The Department of Defense, through its Defense Information Systems Agency, last night awarded Iridium Satellite LLC of Arnold, Md., a $72 million contract for 24 months of satellite communications services. This contract would provide unlimited airtime for 20,000 government users over the Iridium satellite network.

The contract includes options which, if exercised, would bring the cumulative value of this contract to $252 million and extend the period of performance to December 2007.

The Department has taken this action because the Iridium system offers state-of-the-art technology. It features on-satellite signal processing and inter-satellite crosslinks allowing satellite-mode service to any open area on earth. It provides mobile, cryptographically secure telephone services to small handsets anywhere on the globe, pole-to-pole, 24 hours a day. The system and its DoD enhancements will provide handheld service currently not available.

Since the Navy has a requirement more than twice as large as the current capability, the Department of Defense needs the capacity Iridium uniquely offers small unit operations in areas without satellite constellation coverage or during periods when various assets are being used in other contingencies. Special Forces operations, combat search and rescue activities and polar communications will also be enhanced. Iridium will provide a unique resource to enhance DoD mobile satellite communications requirements.

"Iridium will not only add to our existing capability, it will provide a commercial alternative to our purely military systems. This may enable real civil/military dual use, keep us closer to the leading edge technologically, and provide a real alternative for the future," said Dave Oliver, principal deputy undersecretary of Defense (Acquisition, Technology and Logistics).

Iridium Satellite LLC is now purchasing the operating assets of Iridium LLC and its existing subsidiaries, pursuant to a Nov. 22,

2000 order of the U.S. Bankruptcy Court for the Southern District of New York. Under the agreement, Iridium Satellite LLC will purchase all of the existing assets of Iridium LLC, including its constellation of low-orbiting satellites and its satellite control network, and will have Boeing operate the system. The new "bulk rate" service agreement offered and accepted by the Department stands to provide the same critical augmentation capability at substantially cheaper rates.

Early next year, Iridium will offer a classified capability. Classified service will not only be provided for users already registered to the DoD gateway, but will also be extended to new users from DoD, other federal agencies, and selected allied governments.

THE 2001 DAYTON HAMVENTION
FRIDAY MAY 18 - SUNDAY MAY 20, 2001

Join in with us on a great way to enjoy Hamvention.

You do not have to bother with driving and looking for parking places.
Relax and enjoy the ride with us on a luxurious motorcoach complete
with restroom facilities, video movie equipment and a professional driver
and escort.

Motorcoach will pick up and drop off in
Dalton, Chattanooga, Cleveland, Athens and Knoxville.

Saturday: Arrive Dayton. Shuttle to Hamvention.
We will carry those who wish to go out to
the United States Air Force Museum for a
tour of this interesting sight.

Sunday: We will return home.

This is a professionally escorted tour. Included in your price is:

*** Roundtrip transportation on a new and modern touring coach
*** All hotel accommodations including round trip luggage handling
*** Hamvention Admission
*** Air Force Museum Tour
*** Deluxe Continental Breakfast at hotel each morning

3 Days & 2 Nights
$245.00 per person / double occupancy

973. I-CALL heard on Chattanooga trunked system

Yahoo group: chattradio
Date: 2001-01-07 01:20:09 UTC
From: Jim Knight
Topic: 973 Message: 973

I got my new BC780XLT earlier this week and this morning got around to programming in the Chattanooga trunked system. I used the "control channel only" trunking method and it works wonderfully. While searching for active talk groups the scanner stopped on an I-CALL (interconnect call). ID's 716550 and 716780 were alternately displayed as long as the conversation continued. By holding on one ID, I heard both sides of the conversation. I wouldbe interested if anyone else in the area is using a 780 and what you are finding out with it. I intend to punch in some of the unknown 800 MHz control channels that I can hear and see what I can learn about the systems. The really nice thing is that once you set it up properly it shows you the other frequencies that belong to the system as conversations take place on them. This is a great radio!

Jim, (and group)

I've got two 780s......(home and office)......it is a really neat radio..but complex!!!

If you are interested....I connected an external modem and dialed the Uniden 900 number and downloaded their FCC data dump..it is about 180 channels...I used the zip code 37402 for my location.......it contains several Trunked talk groups and a bunch of other stuff...some good some junk....I figured it would be quicker if I started with the data dump, then customized to the way I wanted it organized.

I have tried contacting the scannermaster people about the software...they don't answer the phone and so far haven't answered my Email....do you have any leads on where we could get some software to program/control this unit???? It may be too new....

Give me a personal Email @ carr_fred@... and we can catch each other on the phone and share programming tips....have you loaded the SMART for the weather frequency yet????

fred carr

Following up on this, I decided to start a list of business users of FRS.

Go to http://www.egroups.com/database/chattradio and select the FRS Users link to view what's there so far. You can add records yourself (making this easy to manage from my perspective) or just view what's already there. You will have to log in to eGroups, so if you've forgotten your password I'm sure they have some kind of page where you can get it sent to you.

Jim,

How many times have you heard traffic on 20080? I'm wondering if that might just be one of those "ghost" talkgroups that the TT and TT2 sometimes lock down on that is an image of the real talkgroup. I think this happens occasionally because of the way the first 2 generations of Trunk Trackers interpret data. This is the same reason some people believe there is a 16400 as an Adam/Baker patch...

I just heard it that one day, so you may be right. However, I always check to be sure that the talkgroup is and odd number multiple of 16 since these are the only valid ones. Usually the ghost ones show up as an invalid number. Also, the conversation continued for several transmissions while I was holding on the ID, which makes it seem less likely that this was a ghost. Just wanted to know if anyone else had encountered any of those I listed.

979. Re: [chattradio] Re: Talkgroups

Yahoo group: chattradio

From: John Pless
Topic: 977 Message: 979

actually, odd number talk group id's will pop up that are legitimate. for example, when a dispatcher wants to broadcast a message on several different groups, they will hit "multi-select." basically, it patches several talkgroups together.
case in point: hamilton county keeps the investigative services (19760) patched with civil process group (19792) during day. a multi-select will add a value of 7 to the original group. so, that's why you hear 19767 during day.
another example: adam dispatch puts out a priority call to all three districts. that means 16432 will actually pop up as 16439 (and all three districts will be on this one group).
if you have an older, first generation trunk tracker, you will not hear piority calls unless you have the multi select talkgroup enetered! trunktracker 2's and now the third generation will by default open up to the multiselect groups. also remember, multi-selects may add values of 3 or 5 instead of 7, depending on how many groups are patched. so adam (16432) could pop up as 16435 or 16437.
when units use encryption, this creates an odd talkgroup number. in this mode, the added value is 8. so, adam dispatch when in encryption mode will be 16440. but again, with new generation units, you hear it all when in default mode.

Did the repeater ever drop? I've been able to listen to cars dispatched, acknowledge call, etc. on 16400 and I know that I'm just hearing the Baker Dispatcher on the wrong talkgroup. You very well may have found a little used TG, I'm only asking because there are still a few things I don't always understand about the Trunk System and the way the Trunktrackers interpret all the data.

The division by 16 is the way I always try to decide if I've heard a real TG or an image, seems to work at least 95% of the time...the few exceptions being a the 16400 and one other TG I can't recall, and of course what John was describing.

Yes, I was aware of that but didn't mention it in my post. What I was referring to are the ID's you see sometimes that don't fit any of the multiselect or other status bit additions. I don't report unknowns unless they are valid numbers (taking the possible status bit into account) AND I can hold on the ID and hear both sides of the conversation.

Yes, I'm pretty sure on 20080 that the repeater did drop and I then heard several exchanges. I don't recall about the other 2.

Check out Matthew's site at http://www.kf4lhp.net for all sorts of local frequencies.
The Chattanooga Amateur Radio Club meets the first Friday of each month at the Red Cross building on McCallie Ave. This is the closest I know of to a shortwave club.

985. Chattanooga Electric Power Board hrd in B-Town

Yahoo group: chattradio
Date: 2001-01-10 16:49:26 UTC
From: Larry Van Horn
Topic: 985 Message: 985

I finally got a chance to play (uh learn) the new BC-780 XLT. I have put in a variety of my unknowns etc to test various aspects of this scanners operation. My overall comments on its operation I will file sometime in the future after I have seen our lab results.

I was quite surprised this morning to get the following:

451.675 Chattanooga Electric Power Board (162.2 Hz) called this freq "meters."

Not a bad trip for a UHF here deep in the NC mountains.

Also getting a Mot Type 2 trunk system probably in Polk Co as follows:

861-865.1875, 861-865.7375 (864.7375 data channel). Seen one TG ID 11360 (OM and YL talking). Anybody else have anything on this system. If I can figure out how to get this thing into the Control Channel mode maybe I can learn more. But I haven't been able to do that yet.

More as I get it.

Larry Van Horn
Amateur Radio Call -- N5FPW

PS the CTCSS search speed on the 780 is about the same as the 895. I see now difference. Not sure on the dcs yet as I need a signal to see how fast it is.

Just firing up my yard sale special BC 145xl and was wondering what 16 (
count them 16!) frequencies to program to hear some local action. I live in
the Red Bank area, or is this scanner best left to being a bookend?
Also I was wondering if there were any other short wave listeners in the
area and if there was a group or if anyone was interested in starting one
for this hobby.
Thanks,
Bill

Larry, thanks to some help from this Egroup, I have gotten my radio to go to control channel mode...pretty neat!!..takes some patience to get it in the mode and searching, but once there, it tracks everything out there.

also...try http://mghusa.com/pozilla/downloads.htm

great piece of demo software....I can't wait until they release the full version.

Subject: [chattradio] Chattanooga Electric Power Board hrd in B-Town

I finally got a chance to play (uh learn) the new BC-780 XLT. I have put in a variety of my unknowns etc to test various aspects of this scanners operation. My overall comments on its operation I will file sometime in the future after I have seen our lab results.

I was quite surprised this morning to get the following:

451.675 Chattanooga Electric Power Board (162.2 Hz) called this freq "meters."

Not a bad trip for a UHF here deep in the NC mountains.

Also getting a Mot Type 2 trunk system probably in Polk Co as follows:

861-865.1875, 861-865.7375 (864.7375 data channel). Seen one TG ID 11360 (OM and YL talking). Anybody else have anything on this system. If I can figure out how to get this thing into the Control Channel mode maybe I can learn more. But I haven't been able to do that yet.

More as I get it.

Larry Van Horn
Amateur Radio Call -- N5FPW

PS the CTCSS search speed on the 780 is about the same as the 895. I see now difference. Not sure on the dcs yet as I need a signal to see how fast it is.

Hmm...

How about:
154.325 - Red Bank Fire/Rescue
154.445 - Walden Ridge Emergency Service
154.280 - Fire Mutual Aid
154.415 - Soddy Daisy VFD
154.160 - Hamilton County EOC Channel (dispatches for Dallas Bay, Highway 58, and a number of other fire departments)
154.055 - Hamilton County Schools (Transportation)
168.325 - NPS Chickamauga & Chattanooga National Military Park
47.360 - TDOT HELP Trucks

If I can think of any others that should come in pretty well over there, I'll post them. Red Bank Police, along with now most every law enforcement agency in Hamilton County, is on the 800 trunked system.

Not bad at all. There are actually two repeaters on this frequency, one is atop Raccoon Mountain; the other is atop Mowbray Mountain. They both transmit with 162.2 Hz PL out, and are selected by changing the PL on the input frequency. That is the EPB's channel 4 and is used solely by the Meter Department.

The Overhead Line Department (OHL) and the Substation & Underground Department (SS&UG) each also have their own channel, same arrangement as above. There is also a channel for the contracted crews, a channel for the troubleshooters, and a channel for crews to call the dispatcher (the dispatcher does not monitor the Meter Department, OHL, or SS&UG channels). Neat system with excellent coverage.

>
If the system is an EF Johnson MultiNet system, then you won't be able
to
track it with any scanner. If it is a regular LTR system, the
frequencies
must be entered into the channel number that matches the LTR repeater
number. Repeater number 01 would need to go into channel 1, repeater
number
05 would need to go into channel 5, etc.

996. Trunked system observations

Yahoo group: chattradio
Date: 2001-01-14 00:50:34 UTC
From: Jim Knight
Topic: 996 Message: 996

I've compiled the following over the last week and a half by plugging in various control channels into my BC780.

Chattanooga System
The following frequencies are the only ones I have seen in use for voice traffic:
856.2125, 857.2125, 858.2125, 859.2125, 860.2125, 856.4625, 857.4625, 858.4625, 860.4625, 860.7625, 860.4625. This represents monitoring the system for several days.
The control channel rotates between 857, 858, 859 and 860.2125. So on the BC780 using control channel only mode, these 4 are the only channels you need to program into memory.
856, 857 and 858.9625 are used for data. I have read elsewhere that 857, 858 and 859.7625 are used for interconnect calls (I've only seen one of these since I've had the 780 and didn't notice what frequency it was using). Also I have seen posted in this group that 859.9625 is used for simplex operations. That leaves 856.7625 and 859.4625 as other possible simplex or interconnect frequencies.

Chattanooga Communications SMR
(See Matthew's page at
http://www.qsl.net/kf4lhp/trunking/comm/chcomm.html)
The following frequencies have been used for voice traffic in the last two days:
851.0125, 851.2375, 851.5875, 852.6375, 852.9625, 853.8625, 854.2875, 854.3125, 862.2125.
So far, 852.6375 and 853.8625 have been used as the control channel.

Communications & Electronics SMR
The following frequencies have been used for voice traffic in the last two days:
861.1125, 862.1125, 863.1125, 864.1125, 862.3625, 863.3625, 865.3625.
So far, 863 and 864.1125 have been used as the control channel. I've been following talkgroups using type 1, fleet map E1P8 with no problems. (That map was a pure guess.)

Mystery 3 channel system
There appears to be a system using 851.1875, 852.0125 and 853.4625 only. The latter 2 frequencies have been used as the control channel so far. There has been very little traffic on this system but every transmission so far has used one of the 3 frequencies. I have not even tried to put in a fleetmap yet and currently have it set up as a type 2 system. Under this scheme, talkgroup 1488 is a locksmith company.

The silent system
I have heard control channel sounds on 853.9875 and 853.1875 in the last

2 days. The second frequency appeared after the first one went away, so I am guessing they are part of yet another system. However, no traffic at all has been heard whenever I monitored this one.

I will post updates on these systems as I find them. The 780 is more fun than any scanner I have ever owned!

997. Typo correction

Yahoo group: chattradio
Date: 2001-01-14 00:54:03 UTC
From: Jim Knight
Topic: 997 Message: 997

There's a typo in my frequency list for the Chattanooga system in my previous post. I wrote:
856.2125, 857.2125, 858.2125, 859.2125, 860.2125, 856.4625, 857.4625, 858.4625, 860.4625, 860.7625, 860.4625.

The last frequency in the list should be 860.9625.

If you listen to this frequency at noon on the first Wednesday of the month you will hear lots of this data when the sirens are tested. This makes me think this is the freq used to activate and deactivate them. It may be that the system makes status checks at other times as well. How long did you hear the data?

I double-checked, and it was every 15 minutes (on the hour, at 15 past, half-past, and 15 till), three bursts. The first and third bursts had a little white noise in them; the second burst was full-quieting.

I'll give it a listen in February and see if that's it.

Yes, there are a few strategically placed "civil defense" sirens which are located outside of the 10 mile radius of the Sequoyah Nuclear Plant.

I think I remember seeing Mike Dunne jump when the siren went to screaming.

Yep it is exactly what you have been told Matthew, However it is not a systemwide freq to the best of my knowledge. Here is what I know (very little compared to what I don't know which is volumes, hi hi).

Known 415.025 TVA Ops

408.625/415.025 KID 959 Moulton/Brown Ferry, AL
This is a fixed voice/data input to 408.625. Keyed from Moulton Civil Defense office to Brown's Ferry nuclear power plant repeater and the Moulton substation repeater. This system is used for the operation of repeaters controlling the Lawrence County notification system sirens.

and one more...

415.025/419.625 WXR 73 Watts Bar Nuclear Plant, TN
Unlike the system above, 415.025 is the output for this system and 419.625. This system performs the same function as the one described above. The repeaters are located at Grandview and Pone Knob. Inputs come from Eaves Bluff (WXR 72), Evensville -- Rhea County Civil Defense Office (WXR 73), and Watts Bar Nuc Plant direct to Pone Knob from multiple locations at the plant. I under stand there is tone access needed to trigger the siren system

OK that is it. I know iof no other TVA systems on this one. Oak Ridge is on another freq set (makes sense due to proxmity to Rhea Co and Watts Bar.

Hope this helps Matthew and the list finds it useful.

73 all and good hunting,
Larry Van Horn

1007. Telemetry on 415.025 MHz

Yahoo group: chattradio
Date: 2001-01-17 20:41:33 UTC
From: Dewey Bryant KD4EHC
Topic: 999 Message: 1007

Telemetry on 415.025 MHz

There two LOW BAND TEMA radios at the Hamilton Co. site on Sawyer Rd. in the Walden community on top of Signal Mountain. They are used as part of state disaster plan. One is used (as far I know) for Sequoyah siren activation. TVA has all sorts of remote metering throughout the valley. Weather station like the NWS & TV station, lake level and stream flow ....etc. They use many different ways to back haul the data. The 415.025 MHz data may be one. On Hwy. 72 between Scotsboro & Huntsville is one of my favorites. There is a circular polarized uhf antenna pointed to what I believe is a GOES sat. The antenna, solar panel & equipment cabinet is on the north side of a bridge over a creek. I'm going to Sawyer Rd. soon for repeater maintenance, so I'll check further.

1013. trunked system update

Yahoo group: chattradio
Date: 2001-01-23 00:33:02 UTC
From: Jim Knight
Topic: 1013 Message: 1013

The Chattanooga Communications system rotates the control channel between 851.5875, 852.6375 and 853.8625. I have these 3 programmed in my 780 and can follow the system every day using the control channel only mode.

The Communications and Electronics system rotates the control channel between 862.1125, 863.1125 and 864.1125.

The mystery 3 channel system is still using only the 3 channels I reported before. The control channel swaps between 853.4625 and 852.0125. I have determined that the system is Type 1 and am using E1P8 as the fleet map. No problem following conversations using this map. I first set it up as type 2, then later turned the status bit off. Since there's not a lot of traffic on it I could listen to conversations and note the type 2 ID's that showed up. All the ID's were in block 0 and conversations took place with ID's that only changed in the last 4 bits. Size code S-1 uses the last 4 bits for the unit ID, so it looked like block 0 had size code S-1. The only map that has size code 1 in block 0 is E1P8. I haven't seen any ID's in other blocks yet.

I heard another I-CALL on the Chattanooga system, and it used the normal voice channels that I reported in my previous post. It DID NOT use 857, 858 or 859.7625, which I had read were used for interconnects. Anyone who has the time and inclination to do so, please plug in 859.4625, 856-859.7625, and 859.9625 in conventional mode and let the group know if you hear anything!

1014. TDOT HELP trucks

Yahoo group: chattradio
Date: 2001-01-23 00:57:32 UTC
From: Matthew Sadler
Topic: 1014 Message: 1014

I've managed to find the input to the repeater that the TDOT HELP trucks operate on.

Repeater output: 47.360 MHz
Repeater input: 44.880 MHz
CTCSS tone: 141.3 Hz

The repeater input frequency is one of the old Tennessee Division of Forestry channels, so this frequency sorta makes sense. Still can't find a license on that frequency to TDOT, however.

1015. ATHENS, Ga. (Jan. 19, 2001)-Athens-Clarke County

Yahoo group: chattradio
Date: 2001-01-24 03:55:26 UTC
From: Dewey Bryant KD4EHC
Topic: 1015 Message: 1015

Athens-Clarke County Accepts Motorola-Designed Public Safety
Communications System

Integrates MOSCAD Systems for Fire Station Alerting, Siren Control Into One

Workstation

ATHENS, Ga. (Jan. 19, 2001)-Athens-Clarke County today announced that
the county's Fire and Emergency Services Department has formally
accepted Motorola (NYSE:MOT) MOSCADTM Fire Station Alerting and
MOSCAD siren control systems, becoming the first fire and emergency
services department in the country to integrate both systems into the same

workstation.
The two MOSCAD systems will operate over the county's recently accepted
Motorola SMARTNET? two-way radio communications backbone.
Wendell Faulkner, chief of the county's Fire and Emergency Services
Department, said the integrated, simulcast voice radio and signaling
system
will significantly enhance the agency's wireless communications
capabilities in the county just east of Atlanta. It will include the
ability to
dispatch firefighters and monitor their response while simultaneously
controlling and monitoring the siren warning systems.
"The speed and reliability of this new system will enable us to reduce our

response time in emergencies, a substantial benefit for the county's
95,000
residents, including students at the University of Georgia," said Chief
Faulkner.
The new MOSCAD Fire Station Alerting System enables dispatchers to
transmit automated commands to all fire stations simultaneously and
communicate to firefighters within seconds after sending the alerts. The
system provides an escalating tone pre-alert to the stations involved in
the
emergency response, automatically opens fire station doors and turns on
station lights. The system also provides dispatchers the capability to
remotely monitor and close the fire station doors.
The new Motorola MOSCAD siren control system enables dispatchers to
send out pre-recorded messages or make live public address
announcements right from the dispatch console, as well as activate the
sirens to broadcast their usual alert tones.
"Operating the voice and alerting systems from the same PC also saves
precious dispatch center space without compromising the functionality of
either system," said Chief Faulkner.
Many county agencies and departments already are using the new

communications system including police, sheriff, emergency medical services, public utilities, corrections, transit, transportation, public works,
airport, building inspection, central services, leisure services, planning and
solid waste.
The three-site, eight-channel integrated voice and alerting systems replace
the county's conventional VHF voice communications system. The county also is using five Motorola CENTRACOMTM CRT dispatch workstations and Motorola MTS 2000TM portable and MCS 2000? mobile radios.
"This is an exciting first for both Athens-Clarke County and Motorola," said
Dick Rigsbee, Motorola vice president. "The integrated system will be a model solution for counties across the United States looking to manage their resources in the best way possible as they expand and update their emergency communications systems."

1017. Fw: Southeastern VHF Conference

Yahoo group: chattradio
Date: 2001-01-24 21:32:17 UTC
From: Chris Palmgren
Topic: 1017 Message: 1017

I thought this announcement may be of interest to some folks on the list.

Chris
W4ORS

###

Greetings,

The SOUTHEASTERN VHF SOCIETY will host its FIFTH ANNUAL CONFERENCE April 20-21, 2001 at the Holiday Inn Select-Brentwood, in Nashville TN.

Who should come ?? Anyone with a interest in a myriad of topics which just happen to be related to Amateur Radio above 50 MHz. Topics in the past have included propagation, antenna design and gain measurements, RFI & TVI, contesting, preamps & power amplifiers, Dxpeditions & Mountain-topping, portable,mobile & rover operations, tower construction techniques, Digital modes, FCC Exposure Regulations, radio astronomy, digital TV and much, much more.

This year, in addition to weak signal vhf enthusiasts, we are trying to reach several key target groups, including Skywarn / ARES / RACES, and the general population in surrounding states near Nashville.

Attending these meetings will be some of the most capable amateurs in the world, both with respect to operations and technical aspects. There is much cultural and technical exchange offered by attending the conference.

Many of the specialty areas are directly related to emergency management, however no one has made the connection between the two areas on a formal basis. SVHFS wishes to introduce area Skywarn / ARES / RACES personnel to VHFers and vice-versa. Both organizations could benefit directly both in personnel and technical assistance.

The program will include presentations by antenna specialist L. B. Cebik W4RNL,

VHF guru and author Emil Pocock, W3EP, and Middle Tennessee EME enthusiast Bob McGraw, K4TAX as well as many other VHF+ operators.

For those wishing to present papers at the conference (or included in the proceedings), papers should be submitted to our Program Chairman Dick Hanson, K5AND <dhanson@southernstaircase.com> no later than Feb. 20, 2001. Papers may be submitted in hard copy, or preferably on diskette in MS Word 7 format. We can also convert Word Perfect; pictures are best in black and white. Be sure to number figures, graphs, drawings, and pictures so they may be matched with the references in the body of the article. The SVHFS mailing address is SVHFS Inc., PO Box 1255, Cornelia GA 30531.

Full information on the conference may be found at:
http://www.svhfs.org/ or http://www.etdxa.org/svhfs.pdf

See you in Nashville !

Bert Rollen - K4AR, and Robin Midgett, KB4IDC

1022. Antenna Questions

Yahoo group: chattradio
Date: 2001-02-02 21:27:21 UTC
From: LFDGAJR@aol.com
Topic: 1022 Message: 1022

I am wanting to add an outside antenna to my Shortwave Communications Receiver so I can get back into the swing of monitoring those utility stations. I have never used an outside antenna with my radio before since when I bought it I had just moved and now that we have been living here a while I have just never got around to adding one. (I should mention that I have installed an outside antenna for my 2M and my scanner.) I was wondering if anyone had had any experience with the Radio Shack Wire Attenna kit? I think its like 9.95, which is a good price for my budget at the moment, but at the same time I don't want to waste 10.00. My radio is located on the second floor of my house next to the window. Luckily there are a patch of trees that I think I could hook one end of the antenna to and stretch it to the post on the upstairs porch then feed the line through the window. What are the comments on how this would work? One more question, my radio is a Radio Shack DX-394 that has two spots for antenna hook ups one says LO-Z and is a PL-259 connector the other says HI-Z and looks like a RCA type plug. Which one of these would I need to connect the wire antenna to? I'm assuming its the LO-Z, and if so do I need to hook a female PL-259 connector to the antenna feed-in line or does that come with it? Sorry to sound dumb but like I say its my first outside antenna for HF monitoring.

Thanks for the help,
Christian KF4ZMB

1023. Brush fire in Hamilton County

Yahoo group: chattradio

For the best match, a longwire antenna should be connected to the HI-Z connector. This stands for high impedance, which a longwire has. The LO-Z input is for antennas with 50 Ohm impedance, such as a dipole with a balun in the center and a coaxial feed line. The wire antenna will most likely also work with the LO-Z input, but maybe not quite as efficiently. Whether you will see any appreciable difference will best be determined by hooking it to one and then the other while listening to a signal.

1. wire between trees.
needs lightning protection.
ground wired to protection device and radio.
you'll have less static
2. a simple tuner will help a lot. (Grove & MFJ have nice ones)
keep out pesky am broadcast intermod.
acts as preselector to radio input

two simple things that will get alot more outa your radio

Actualy, use the pl-259!! Radio Shack has a quick connect pl-259 that will allow you to connect the longwire to the center conductor pin. I had a dx-394, and there was a huge difference in the signals I heard when I went from the phono type plug to the pl-259!!! Just take your longwire, and touch it to the center connector of the pl-259!!! I actually made a dipole, with the lenth of el-cheapo coax (thin kind) and connected one part of dipole to center of coax, and the other side of dipole to the braided sheild!! I used my dx 394 to dig out signals on all hf bands! The hi-z was a waste of time and signals were way lower than through coax plug...

Probably one of the better resources on the web for antenna information is
at the Hard-Core-DX site. Lots of good info about most types of antennas.
I'm running a 140' random wire into my IC-R75 with great results.

1032. Georgia State Patrol New Radio System

Yahoo group: chattradio
Date: 2001-02-06 23:56:40 UTC
From: David Cannon
Topic: 1032 Message: 1032

From the Atlanta Journal Constitution:

Tuesday, February 6, 2001

House budget writers seeking to improve highway safety in metro Atlanta and Middle Georgia provided Georgia State Patrol funding Monday for a new radio system and computers in patrol cars.

The measure would complement Gov. Roy Barnes' goal of hiring an additional 75 troopers to patrol the five core metro counties of Clayton, Cobb, DeKalb, Fulton and Gwinnett.

The $20.2 million for the radio and computer system was approved by the House Appropriations Committee as part of an amended state budget. The full House is slated to vote Wednesday on the budget for the fiscal year ending June 30. The spending plan then goes to the Senate.

State troopers cannot communicate by radio with some county police departments in metro Atlanta and near Perry, said Col. George Ellis, director of the Georgia State Patrol.

The county departments use frequencies beyond the range of the state's radio system, which Ellis said is about 30 years old. Troopers cannot communicate with each other in some areas because of blackouts, he said.

The computers would allow troopers to run background checks without waiting for a radio dispatcher to get the information. The computers also could produce a traffic ticket, a feature that Rep. Larry Walker (D-Perry) said would reduce problems in prosecuting some alleged offenders because some handwritten tickets are illegible.

I drove by Brainerd High on Moore Road this afternoon and noticed they have a decent sized tower on top of the building with a microwave dish...

For those of you who aren't aware of it, Hamilton County Schools is moving their data communications off of telephone lines and onto microwave. Cheaper AND faster. They aren't the first people to start using point-to-point data in the area, but they're certainly building out one of the larger networks in the area.

Actually the dish is a relay point...the actual antenna looks like a small (11") serving platter....we are doing relays from some schools to others that are in the shadow of our main links on Signal (water tower) Lookout (Incline), Mowbray, and the VAAP...you'll also notice we had to add 40 feet to the tower at the VAAP to hit some of the schools in Ooltewah....there is a 45 meg link on the backbone and 10 to each school that needs it.....rest of the schools are running at between 258k and 10 meg......big pipes to carry data....we are experimenting with voice over IP and video over IP right now....looking at distance learning stuff.....

Subject: [chattradio] County schools and such

I drove by Brainerd High on Moore Road this afternoon and noticed they have a decent sized tower on top of the building with a microwave dish...

For those of you who aren't aware of it, Hamilton County Schools is moving their data communications off of telephone lines and onto microwave. Cheaper AND faster. They aren't the first people to start using point-to-point data in the area, but they're certainly building out one of the larger networks in the area.

1039. New 222 MHz band repeater

Yahoo group: chattradio
Date: 2001-02-25 04:03:05 UTC
From: Matthew Sadler
Topic: 1039 Message: 1039

A new 222 MHz band repeater is now on the air. The W4LOC 224.560 repeater (-offset, no PL) is located at High Point, GA atop Lookout Mountain. This is south of Covenant College. This repeater is part of a linked network, as this machine is linked to the WR3S repeater at Short Mountain, TN which is linked to several other 222 MHz repeaters in middle Tennessee.

This repeater, and the link network, is open to all amateurs. Currently, the machine is running 7 watts but there is still more work to be done on it before it is finished.

More 222 MHz repeaters to be part of this network are planned for the area later on this year.

They are disposition codes: D-5 is "No report filed" for sure. I used to have a list of all the D codes that I got from an officer friend, but lost it somewhere back in time. As far as the number codes, you might want to check out "Police Call" in the back of the book(s) where they also list the complete 10 codes also, available at Radio Shack. The list of D codes might be in there also.

Christian I hope I didn't misunderstand this but I think you were asking who WGY 9900 was. And I think someone said SEATAC and that is definitely not correct. WGY 9900 is one of the many mobiles that FEMA now has and this one is located in Region 10 (FRC Bothell, WA). 9900 is probably the Region director's mobile stn or could be a command post. We have not been able to pib that down yet.

Thanks for the information about WGY 9900 ID. I actually was wanting to know which airport was closed (which I believe is where the SEATAC came from) and also wishing to know who WGY 9900 was. So now both questions have been answered.

Once again thanks for the help.

1050. Three channel trunked systems

Yahoo group: chattradio
Date: 2001-03-05 01:44:25 UTC
From: Jim Knight
Topic: 1050 Message: 1050

The three channel system I reported in an earlier post (853.4625, 852.0125 and 851.1875, fleet map E1P8) has several users in the Cleveland area. I have heard directions given to places around Cleveland. Also I have identified talkgroup 010-1 as belonging to Terminix. I heard one of the employees mention the name over the air. I don't know if they were in the Cleveland area or not.

And... There's another 3 channel system consisting of 853.9875, 853.1875 and 851.1125. E1P8 seems to work fine for its fleet map too. I had previously reported this as "the silent system" as I had not heard any voice traffic, just the control channel alternating between the first two frequencies. This weekend there was some voice traffic which enabled me to find the third channel. Users seemed to be in the Chattanooga area - one reported being on the 8th floor at Erlanger.

1057. Cherokee Trails 2001 Rally

Yahoo group: chattradio
Date: 2001-03-10 04:22:16 UTC
From: Matthew Sadler
Topic: 1057 Message: 1057

Those of you who are hams and are volunteering at the Cherokee Trails 2001 Road Rally are probably already aware of what I'm posting here, but for those of you who hadn't heard about the rally, you may want to listen in on the comms late next week.

The Cherokee Trails 2001 Rally is sanctioned by the Sports Car Club of America (SCCA) and is composed of different levels of teams (based on time and money spent in preparing cars for the races) racing street-legal but heavily-modified cars on, in this case, gravel US Forest Service-owned roadways that will be closed to traffic during the races. The event will be held for three days - Thursday, March 15; Friday, March 16; and Saturday, March 17. Competitors will drive from the Cricket Pavilion downtown each morning out to the Ocoee Whitewater Center, run the stages, and return to Chattanooga at night for service.

The ham radio net control station will be located at the Ocoee Whitewater Center, and net control will use the callsign WD4OAR, the callsign of the Ocoee Amateur Radio Society. OARS provided communications for the first rally that was held last year, and OARS member Chris Palmgren, W4ORS, will serve as Chief of Communications. During the rally, a number of repeaters will be used to provide safety-related communications:

Primary repeaters:
147.180 - WD4DES - Benton/Oswald Dome
442.250 - WD4DES - Benton/Oswald Dome
145.310 - WA4PNI - Athens/Starr Mountain

Backup repeaters:
147.315 - AJ4D - Tellico Plains
146.790 - W4AM - Chattanooga/Signal Mountain

Simplex Net:
146.550

In addition to monitoring these frequencies, you may want to monitor frequencies used by the US Forest Service, the Tennessee Valley Authority, and Polk and McMinn counties, as all will be involved in providing rescue and law enforcement services to the event. Those frequencies can be found on my website at http://www.kf4lhp.net/govtlink.html - just select the desired agency on that page.

For more information on the Cherokee Trails Rally, see http://www.cherokeetrailsrally.com/ .

Topic: 1058 Message: 1061

CB and Amateur radio are like night and day... no comparison. I would
suggest you go to the ARRL web site (www.arrl.org) and check out their info
on local clubs. If you want to get a small taste of Ham radio, try
listening to the local 146 MHz. repeaters with a scanner. Just remember
that you will only get a very small sample of what Ham radio is about.
CB can turn you off to radio! ;->

1063. Cherokee Trails 2001 Rally Recap

Yahoo group: chattradio
Date: 2001-03-18 17:37:33 UTC
From: Matthew Sadler
Topic: 1063 Message: 1063

Well, the rally is now over, and with only one serious injury, a broken foot, it was certainly a safe event considering the changing road and weather conditions throughout the three days. The driver who sustained the broken foot struck a tree at a high rate of speed on the last stage Saturday (as a side note, I have two photos of the car hooked up to the wrecker, and will post them on the web later on this evening).

At the press stage, held at the Volunteer Army Ammunition Plant on Wednesday, the hams on hand used 146.550 simplex to provide communications, with hams stationed along the course, at the VIP tent, the service area, and at the gate on Bonny Oaks Drive. Chris, W4ORS, was located atop a small hill and was acting as net control so simplex provided excellent coverage and avoided tying up a repeater for the day.

Thursday, the event went into full swing, with five stages held in the forest. Two of the stages were run in the morning on the south side of the Ocoee River, and the other three were held north of the Hiwassee River. The ham radio net control station was located at the Ocoee Whitewater Center on US 64, and operated primarily on the 147.180 WD4DES and 145.310 WA4PNI repeaters throughout the entire event. In addition, 446.050 simplex was used for communications between net control and the hams stationed in the service area.

Tennessee State Parks operated a law enforcement net on their 151.160 channel, using their repeater located on Oswald Dome, communicating with their officers, as well as the U.S. Forest Service law enforcement personnel and the TVA Police officers who were on hand. In addition, they loaned 24 handheld radios, also operating on the same repeater, which were distributed to the rescue and EMS personnel and the tow truck drivers, allowing them to communicate on a common frequency. State Parks also loaned a Kustom K-band (24.15 GHz) radar gun which was used to check speeds of rally drivers as they were travelling on public roads to make sure they were not speeding.

All in all, the race went pretty smoothly, but like everything else there are always areas for improvement and new ideas that will come up for next year. Most all of the hams and volunteers in general would agree that this is an excellent event to work, and when/if it is held next year, I would encourage everyone on the list to sign up and volunteer some time.

1067. Brasstown Unknowns

Yahoo group: chattradio
Date: 2001-03-20 20:20:40 UTC
From: Larry Van Horn
Topic: 1067 Message: 1067

Need a challenge. Looking for possible new activity in your area? I thought I would pass along some of my Fed unknowns I have monitored here in Btown. Maybe someone out there has a clue or knows who these are. So here are my Fed Band unknowns. Anybody, anywhere have any fills please?

142.025 Unid agency in NFM.
143.075 Unid Data Burst noted here
143.350 Unid station here in NFM.
149.725 Unid comms noted here. (NFM) Also sounds like a voice/digital pager system here.
150.075 TN Unid agency repeater output, some sort of wildlife game wardens (feds) near Tellico (on TN side).
150.450 Unid Land Mobile Transmission noted here (NFM)
163.1125 Unid agency noted here
163.5375 Unid agency, repeater output. Talking about suspects near gang house, definite LE. Mentioned Murrayville or Maryville. Not Atlanta area. YL calling unit D64. Who who????
164.1750 Unid agency here, sounds repeater input or simplex. Might have two different locations here. Male base stn and female base stn.
164.9875 Paging System Repeater noted here.Who?
165.0875 Weak repeater output signal here (Volunteer Army Plant?) Also heard a possible louder simplex here. JC5 calling JC8
165.1875 Unid agency up here weak. Lots of keyups. Ammo plant (Chattanooga) paging?
165.2375 Unid customs repeater (in clear)
165.4625 Possible weak activity noted. ATF? (automatic repeater ID, weak)
165.4875 Unknown
165.5625 Possible weak activity here. Maybe FBI in clear or ?
166.0750 DES/DVP or some sort of data noted here. Another one of my big big mystery freqs.
166.7500 Unid agency with DES/DVP noted here. This might be a FBI freq
167.1250 Unid agency, repeater output (some sort of maintenance outfit) either DOE/TVA
168.8500 Unid agency YL dispatcher noted here. "828 calling 749"
169.1000 Unid agency noted here with a carrier (203.5 tone)
169.6250 Unid agency with DVP/DES.
169.6750 Unid agency with DVP/DES.
170.3250 Unid agency, tone data burst noted here. Probable Hydro signals
170.5750 Unid agency
171.3875 TVA Paging?
172.4750 Unid agency with DVP/DES encyrption. No TVA listed. Who?
172.5750 Repeater
172.9000 ?? (CW ID=RPTR) FAA repeater output (YL/OM talking, somewhat weak but readable). Mentioned operations. Marietta or Birmingham?
172.9500 ?? Unid agency repeater output noted here with CW ID.

172.9750 ?? FAA noted here (YL dispatcher) Possible Atlanta repeater?
173.2750 ?? Sounds like hydro data system
173.7000 Unid agency noted here. This is a new splitter under the 12.5 kHz plan.

Have fun out there and good hunting,

Larry Van Horn

1068. Military VHF

Yahoo group: chattradio
Date: 2001-03-20 20:36:38 UTC
From: Matthew Sadler
Topic: 1068 Message: 1068

I've been monitoring someone lately on a repeater with an output frequency of 139.075 MHz and a PL tone of 97.4 Hz. Don't know the input frequency or the location of the repeater. I think this is used by either the National Guard or the Army Reserve here in Chattanooga. Heard two ops discussing changing oil in something and needing some 15W40 motor oil.

Any ideas?

From: Matthew Sadler
Topic: 1072 Message: 1072

For those of you who have scanners or radios that are capable of doing DPL, or DCS, or whatever else you want to call the digital squelch...

TWRA is apparently using D306 on their repeaters (at least here around Chattanooga) as the code when the radios are in analog mode. TWRA rebuilt their statewide VHF-HI network (in Chattanooga it's on 159.240 MHz) several years ago, replacing all of the repeaters (most of them were GEs) with Motorola Astro equipment and they tend to operate in the digital mode. I heard an agent talking with the dispatcher, and the agent had to switch to analog mode because the radio wasn't getting through.

1073. Krystal Aviation

Yahoo group: chattradio
Date: 2001-03-26 22:31:10 UTC
From: Matthew Sadler
Topic: 1073 Message: 1073

Krystal Aviation, the FBO (Fixed Base Operator) at Lovell Field, can be heard on the following frequencies:

129.150 - AM mode, pilots can call in to the FBO on this frequency
464.375 - FM mode, comms for employees (DPL 261)

An FBO is the aviation equivalent of a service station - they'll fuel up your plane, perform minor repairs and so forth.

Just an addition to the Krystal Aviation freqs. There are two operations on the field both owned by the Krystal Company. Krystal North is on the north side of the main terminal, Krystal South is on the south side of the terminal. K North uses the 464.375 while K South uses 469.375, same DPL of 261 for both. There are no differences other than the name as far as service of aircraft. K South used to be Hangar One but was bought out by the Krystal Company around 1984. Happy listening.

Yep, they are both licensed as simplex frequencies - on different licenses,
no less!

464.375 - WPEU800
469.375 - KD20194

There are no repeaters licensed on 464.375 in the area, so it doesn't cause
interference.

Apparently, one of Old Navy's handheld radios has been stolen, and whomever stole it is sitting out in the parking lot or somewhere nearby, cussing and harrassing them over the air... Larry Van Horn reports that they use 151.955, and I think that's with a PL of 85.4 'cause there is also a paging system on that same channel.

MT EXPO 2001!

Several years ago, Grove Enterprises stopped holding the immensely popular MT EXPO conventions due to excessive costs in Atlanta. Recently, however, we've remodeled our building here in Brasstown, and it would serve well for a downsized version. We have a 200 seat main hall, breakout rooms, an eating facility, and nearby Murphy and Hayesville have nice motel accomodations. Of course it would be drive-in only or fly in to Atlanta, Knoxville or Asheville and drive from there (the greater metropolitan Brasstown international airport won't be opening for quite a while!).

Advantages, of course, are low-cost housing/eating costs, rural location, minimal traffic, friendly environment.

Disadvantages are: No major airport, fewer forums, few (if any) commercial booths, limited attendance.

Best of all, we would have hands-on demonstrations of top-of-the-line radios, from portable scanners and shortwave receivers all the way up to $30,000 government equipment! Outdoor antennas abound at our 6500 square foot facility, and we are on a main highway, easy to find, with plenty of parking.

So here are some options, awaiting your responses:

(1) Is such a resumption of our EXPO a good idea?
(2) Would you like it to be held Friday and/or Saturday, and/or Sunday?
(3) What would be the maximum registration fee? ($35? $50? $75?) (This would possibly include a lunch)
(4) When would you like to have it? (Suggest several months, or even dates)

Our decision will be based upon your replies.

Thanks.

1083. Channel 39?

Yahoo group: chattradio
Date: 2001-04-06 01:08:41 UTC
From: Glen Hendon
Topic: 1083 Message: 1083

Hello,
Since I do not live in the immediate Hamilton County?Chattanooga area could someone answer a question for me concerning local TV stations? I have recently seen several listing in local TV guides for a WYHB channel 39. Can anyone tell me a little bit about this station and who owns it, etc.? I am an avid broadcast hobbyist, but I cannot pick up this station or Channel 23 WELF. Is it a low power (LPTV) station? Thanks in advance to anyone.
Sincerely, -Glen Hendon KD4LDI

Topic: 1083 Message: 1084

Here's a listing of all the local UHF stations. Note some of which are labeled LPTV (low power) and others are marked DT (digital TV...FCC requires a 2002 sign on date for this digital channel). This information comes from http://www.100000watts.com . BTW, WRCB petitioned the FCC to move to channel 13 VHF for DTV and it was granted. Also, all analog stations must sign off in 2006.

1085. MONEYROLA HAS "SLIGHT" PR PROBLEM

MONEYROLA HAS "SLIGHT" PR PROBLEM
==========

March 30, 2001
Dear UFOA Member:

Today the UFOA called for the resignation of Fire Commissioner
Thomas Von Essen. My letter to the Commissioner, with a copy to the
Mayor, is attached.

We would not have been able to document the case against
Commissioner Von Essen without the cooperation of many of our members.
All of us on the Executive Board thank them for the courage they showed
in what I believe is a struggle for the soul of the Fire Department.

Again, if you have any information or documents related to the
Motorola digital radios, please call or write to me. You have my word
you will be protected from retribution.

Fraternally,

Peter L. Gorman
President
-

Hon. Thomas Von Essen
Commissioner, FDNY
9 Metrotech
Brooklyn, NY 11201
March 30, 2001
Dear Commissioner:

It's time for you to resign. By now every member of the Fire
Department knows that your administration knew the Motorola radios did
not work properly, and failed to promptly warn thousands of firefighters

of the dangers.

This is probably the most shameful episode in the proud history of
the New York City Fire Department.

Commissioner, we know that Headquarters was warned in January and
February that the radios were a big problem. You know that on March 16,
two days after the radios were issued, Chief Donald Burns acknowledged
there were "rumors" in the Fire Department that the radios were not
working properly. That should have triggered a full-scale inquiry, but

there was none. It is not enough for Headquarters to cite "rumors" and not check the rumors out.

You knew, or should have known, that complaints about the radios were reported at fires on March 17, 18 and 19. Finally, at 9:30 p.m. on Monday, March 19, a Deputy Chief at a Queens fire transmitted a report that we almost lost a firefighter. Out of air and disoriented, the firefighter called "Mayday" into his radio seven times. Someone also shouted "Urgent" into the radio. Virtually all of the messages went unheard at the fire scene.

The Deputy Chief also attached reports from two battalion chiefs and

a Ladder Company officer. The transmittal by the D.C. said, "I am attaching reports from Battalion 50 and 51 and Ladder 143 as to some problems that they experienced with the HT during this operation and over the past few days."

Still there was no immediate action by the Fire Department, and no warning to the members, on this potentially lethal problem. On Tuesday morning, March 20, five Staff Chiefs went from Metrotech to the Fire Academy to conduct their own field tests, something the Department had failed to do before issuing the radios. The Staff Chiefs quickly concluded the radios were a clear and present danger to the members, and

that afternoon Chief Nigro announced a recall of the equipment with a warning that until the changeover to the old radios could be accomplished, all members of the Fire Department should use the Motorola

digitals with great care and attention to the inherent problems in the equipment.

Not good enough. If firefighters attacked the flames as leisurely as the Fire Department addressed this problem, New York City would be a prairie.

Just as soon as the "rumors" surfaced, Headquarters should have been all over this problem. Just as soon as the first report from a fire

officer arrived at Headquarters, all members of the FDNY should have been alerted to the fact that their lifeline might not be as promised.

A week of turmoil in the Fire Department never should have happened

in the first place. Department records indicate that 20 Motorola digital

radios were signed out to the Fire Academy between January 5 and February 9, where they were used to "familiarize" members of the Department with the equipment.

The UFOA has been told that problems with communications were noted

immediately, and persisted throughout the trial period. Most disturbingly, we have been told that the Assistant Commissioner for

Communications, Stephen Gregory, was aware of the problems. Subsequently, the radios were issued on March 14 to thousands of members

of the FDNY without being field tested by any of the units that certify new equipment. The radios were not sent to Research and Development for testing. They were not examined and tested by the Safety Battalion. They

were not subjected to any of the normally rigorous testing standards that every new piece of equipment receives.

You and your staff failed the members of the Fire Department in the

most shameful way possible. For almost a week Headquarters was silent as

firefighters were sent into fires all over New York City, believing their equipment was the best the Department could give them. For at least two months, an Assistant Commissioner in charge of the project apparently failed to share his knowledge and information with the highest levels of your administration.

Now it is 10 days after you were forced to recall the Motorola digital radios, and you have been unable to identify anyone responsible for everything that occurred. Instead the Department has spent much of its time investigating the incident where a firefighter almost died, seeking to place blame anywhere but on the radios. It's time for you to resign.

Sincerely,

Peter L. Gorman
President
cc: Mayor Giuliani

I do not understand about all analog stations must signoff by 2006. I know I will still have several TVs that I know are not digital. Does this mean all the TVs (B&W for $20 to color 27" for $300) will become pieces of useless furniture? What will we be able to use the TVs currently sold in Walmart for in 2006? Paperweights? I think we need to have some legislation changes!

The "solution" by the tv industry will be the availability of converters, that will convert a digital tv signal to an analog one to your current set. So, yes, consumers are being held by the balls in two ways. First, you'll buy a digital converter. Second, the industry hopes you'll tire of your old set and buy a new digital one. I'd suggest wearing an athletic cup for the ride! Maybe folks will realize we don't really need all these tvs anyway, since mankind pre-world war two seemed to survive just fine without the tube! It may sound ancient, but human interaction can stiil be achieved by one on one conversation, by radio...and there are books and the arts available to offer hours of entertainment and mental stimulation. And oh yes, there's the internet too! With money saved from buying a converter, new digital set (and yes, deluxe athletic cup) you can buy lotsa books, become an amateur radio operator and work the world, get internet service and buy a few six packs to invite your buddies over for a night on the porch. Did I mention that I love tv?

1090. Re: [chattradio] Channel 39?

Yahoo group: chattradio
Date: 2001-04-06 21:13:20 UTC
From: Chris Palmgren
Topic: 1083 Message: 1090

Steven,

After 2006, you'll have to have a converter box much like those used by the cable system to convert the digital signal to analog when using your current TV.

2006 is the target date, but the FCC has allowed stations and markets waivers if they aren't ready and the market is not saturated with digital.

So, your current analog TV won't be useless, but on it's way out for the next generation of digital, high-definition sets. Also, local broadcasters can use their bandwidth on digital to broadcast as much as four stations on the same signal. Many stations are using part of the bandwidth for digital messaging which makes television watching interactive.

The HDTV sets are currently upwards of $10,000, but the price will come down over the next few years.

It will be an interesting conversion period.. so stay tuned. Hold onto that analog set.. for now. The digital signal will be so much superior and the video/audio on the HDTV sets will blow away the existing analog sets.

73,

Chris Palmgren
W4ORS
WTVC-TV 9

From: Matthew Sadler
Topic: 1083 Message: 1091

Not to mention that your analog set will still be quite usable for watching VHS tapes, and even LaserDiscs (remember those?) - or useful if amateur TV is a popular mode in your area.

1092. Re: [chattradio] Channel 39?

Yahoo group: chattradio
Date: 2001-04-06 21:31:58 UTC
From: Steven G. Bradley
Topic: 1083 Message: 1092

So I assume cable TV will probably still be available on the analog channels as they are now as the FCC rules do not apply to them, I also would assume that DISH Network and such will not change either.

1093. Hutcheson Medical Center

Yahoo group: chattradio
Date: 2001-04-07 01:47:32 UTC
From: Matthew Sadler
Topic: 1093 Message: 1093

Hutcheson Medical Center has apparently put two new VHF-HI band repeaters on the air at their facility. The frequencies are 153.020 and 153.155 (PL 136.5 observed), but I haven't monitored them enough yet to determine their purposes. At least the 153.155 repeater is coming in full-scale at my location near the I-24/I-75 split.

Callsign on these two is WPSF402.

Cable TV is already moving to digital in some markets. The current set top boxes convert the digital to NTSC analog. The same is true for the "Dish" providers. You will be able to just swap boxes when HDTV sets are more affordable. Many of the latest DVD player also have support for some subsets of HDTV like 16:9 aspect ratio viewing. A HDTV "ready" set is now in the $3,000 (16:9 picture tube) range. These sets will still require a set top box for HDTV when the smoke clears. Maybe by 2006 we will have a real idea of what we really need!

Matthew correctly states that this is a LE net for the Chattahoochee NF. Cherokee NF uses this freq as well, but with a tone of 123.0. Input freqs likely vary, because the same input tones are used in adjoining forests.

1099. June 2001 edition of Monitoring Times

Topic: 1099 Message: 1099

Ordinarily, I don't tend to toot my own horn, but I would like to invite everyone to pick up a copy of the June 2001 edition of Monitoring Times magazine at your local Barnes & Noble bookstore... because I wrote the cover article on railroads and radio. The cover features a "local" locomotive, the Tennessee Valley Railroad Museum's own steam engine #610.

Also, I have put the Chattanooga trunked radio system info page online, it is accessible at http://www.kf4lhp.net/ . The page has been updated from the old version but still needs some more work. There is also (now) a map of the system's sites for your convenience.

Along this same line, has anyone been monitoring 169.55 and 169.925? These sound like National Park or Forest operations too, with mentions of Blue Ridge on 169.55. Not sure if they mean the Blue Ridge Parkway or Blue Ridge, GA.

1101. 859.4625

Yahoo group: chattradio
Date: 2001-05-15 22:49:46 UTC
From: Jim Knight
Topic: 1101 Message: 1101

859.4625 is now being used in the regular rotation on the Chattanooga trunked system. Until a few days ago I had never noticed it being used. I also heard a telephone interconnect with someone checking their voice mail on 859.7625. This is the first time I've heard that frequency used.

1105. Re: [chattradio] 859.4625

Yahoo group: chattradio
Date: 2001-05-16 18:27:48 UTC
From: John Pless
Topic: 1101 Message: 1105

859.4625 does get in rotation when the system gets full. In fact, all of the assigned frequencies, including those used for telephone interconnect, that don't normally fall in the "rotation" can be in rotation and used for voice comms if system gets REAL full. That's why it's important to include ALL frequencies in the 20 channel assignment in your trunk bank.

1106. Riverbend

Yahoo group: chattradio
Date: 2001-05-22 23:01:18 UTC
From: Matthew Sadler
Topic: 456 Message: 1106

It's not too early to start thinking about monitoring the traffic at Riverbend... and I just got back in from the volunteer meeting (well, one of three that will be held this week) and have some information to pass along.

Once again, all Riverbend internal communications (Riverbend volunteers and such, NOT the law enforcement, EMTs, rescue people and such) will be on Nextel. Nextel is a big sponsor of the event and they have inked a three-year contract with the event organizers. So, no luck there. :(

Also, it might be worth monitoring 855.2125 MHz if you will be in the area. This is licensed to Hamilton County and I am told by reputable but anonymous sources that this repeater is installed on the command post bus, so the county Sheriff's personnel may well be on here.

1107. New trunked system found

Yahoo group: chattradio
Date: 2001-05-28 23:39:36 UTC
From: Jim Knight
Topic: 1107 Message: 1107

I have found a new (to me) trunked system in the area. Frequencies used so far are 856.6375, *857.6375, *858.6375, *859.6375, 860.6375, 857.0375, 858.0375, 860.0375. The ones marked with * have been used as the control channel so far. I found the others using the control channel only trunking method. If you are programming this into a trunktracker I or II, you might want to add 856.0375 and 859.0375. Although these haven't been used it seems logical that they might be. As of now I have it set up as a type 2 system and have heard activity only on one talkgroup, 31296. The user seems to be going places in the Chattanooga area such as Middle Valley Road, Brainerd and Fort Oglethorpe. I'll post more info as I find it out. This brings the number of trunked systems I know about in this area to 7:
Chattanooga/Hamilton County system
Erlanger Hospital system
Communications and Electronics system
Chattanooga Communications system
Unknown 3 channel system #1 (see my previous posts)
Unknown 3 channel system #2
This new, possibly 10 channel system

1108. Electrical Equipment

Yahoo group: chattradio
Date: 2001-05-29 01:56:36 UTC
From: Matthew Sadler
Topic: 1108 Message: 1108

I've been listening to the EPB run themselves ragged today working to repair storm-caused damage, and thought that knowing what some of the stuff they talk about is would help everyone out there. Sometime, I might even get my photos together, scan them in, and create an on-line version of this (out somewhere on the web) with photos so you know what it is when you see it.

So, here's a glossary of terms that you'll hear them using frequently.

Transformer (or pot): a transformer takes an input at one voltage and outputs a different voltage. These can be pole mounted or pad mounted (on the ground). Transformers for small businesses and residential customers are usually installed singly, larger customers and industry will usually have a "three-pot bank," or, a set of three transformers.

Recloser: these are more commonly referred to as OCRs (and occasionally VCRs). An OCR (oil-circuit recloser) and a VCR (vacuum-circuit recloser) do the same thing, they just do it differently. When a fault is detected on the line, it will shut off the power momentarily, then restore power. It will do this for a pre-set number of cycles before "locking out" which requires a manual reset by a lineman. These help reduce the number of times linemen would be called out just because a tree momentarily hit a line and shorted it out. There is usually a "bypass" installed, whereby the lineman can close a fuse and bypass the recloser.

MOS: motor operated switch. Usually a big one, 46 kV (kilovolts).

46 kV line, operating at 46,000 volts, is what feeds substations. Substations output either 4 kV or 12 kV which is then dropped down to 120/240 V outside your house.

Fuses are just that, fuses. Just really big and weather-resistant. Same for disconnects, except they are not fused.

Regulators look like pole-mounted transformers, except they're a lot bigger. A regulator takes an input and will adjust it slightly up or down to ensure that the power it is outputting is at the proper voltage for use downstream. These are used when a section of primary (4 kV or 12 kV) feeds customers a long distance away from the substation, since voltage drop could cause voltages at the customer's premises to be too low.

========
This is, of course, just a quick glossary. Questions and comments welcome.

1109. More info on new trunked system

Yahoo group: chattradio
Date: 2001-05-29 23:55:13 UTC
From: Jim Knight
Topic: 1109 Message: 1109

I looked up the frequencies I have found for the new trunked system on the FCC web site. They are licensed to Chattanooga SMR, Inc. under callsign KNNM730, and all 10 frequencies I listed yesterday are licensed. The transmitter location is shown as 3228 Wilcox Blvd. The license issue date is April 10, 2001.

I turned off the status bit but left the system as a type 2 system. I began to see ID's such as 31301, 31305, 31308, 31311, 31315, all with related conversations. The user seems to be a towing service.

The ID's tell me that it is not a pure type 2 system, and that block 3 must have at least 5 bits (32 ID's) for the ID field, making it possibly size code S-5 or S-6. This does not correspond to any of the preset trunk tracker fleet maps.

I'll report any further findings.

1110. Info on one 3 channel trunked system

Yahoo group: chattradio
Date: 2001-05-30 00:16:58 UTC
From: Jim Knight
Topic: 1110 Message: 1110

It occurred to me that I had never tried to look up the 3 channel trunked systems that I had previously found, so.....
853.4625, 852.0125 and 851.1875 are all shown licensed to Nextel License Holdings, Inc. in Chattanooga.
853.9875, 853.1875 and 851.1125 didn't show anything in the immediate area - the nearest was Lenoir City. So I still don't know about this one. I know that it has a user or two on it, though.

Topic: 1115 Message: 1116

FYI.......I just bought 5 MTS radios for our warehouse guys....they will go by Warehouse 1, 2,3,4,5.....and our Pony delivery vans...they deliver to each school four days a week...they will go by Pony 1, 2, 3,4.

We have installed base stations with remote consoles at the Central Office at the VAAP...and at Dodds Ave Service Center. We have these talkgroups (I'll have to get the numbers....I don't have them handy)

Admin
Bus Transportation
Maintenance
Courier (Pony and Warehouse)

This is for the Hamilton County Schools....PS...we buy our OWN radios....the County does not buy them for us.

1118. Times/Free Press now on new trunked system

Yahoo group: chattradio
Date: 2001-06-26 01:05:52 UTC
From: Jim Knight
Topic: 1118 Message: 1118

The Times/Free Press folks who take care of delivering papers to those who didn't get their regular delivery are now using the Chattanooga SMR trunked system (856-860.0375, 856-860.6375). I reported on this new system a few weeks ago. Since then I have changed my setup to have it as a type I system with fleet map E1P8. This seems to be working so far with related conversations all on the same talk group. I heard the Times/Free Press on talkgroup 314-3 Sunday morning. They then told some of their units to "switch to channel B, the rest of you stay on channel C". At this point 314-2 came alive with some of the units and 314-3 had others. This makes me think that at least bank 3 has the correct size code. Also I wonder if 314-1 might be channel A for the Times/Free Press. 314-2 is channel B and 314-3 is channel C. Using this fleet map, the towing service that I first heard on this system is on talkgroup 313-1. I have heard other talkgroups in bank 1 being used, but no ideas as to the users yet.

Thanks, John! I always appreciate your posting any new talkgroups you know about.

1122. One 3 channel trunked system is gone

Yahoo group: chattradio
Date: 2001-06-28 23:07:27 UTC
From: Jim Knight
Topic: 1122 Message: 1122

The 3 channel trunked system consiting of 853.4625, 852.0125 and 851.1875 appears to have ceased operations. 851.1875 now has a carrier on it 24/7 with an occasional beep transmitted. The other frequencies appear to be silent. The other 3 channel trunked system (853.9875, 853.1875, 851.1125, frequencies licensed to Nextel) is still on the air but doesn't seem to have very many users.

1125. Yet another trunked system

Yahoo group: chattradio
Date: 2001-07-02 23:28:59 UTC
From: Jim Knight
Topic: 1125 Message: 1125

Found another trunked system this weekend. Four channels - 856.8375, *857.8375, *858.8625, 860.8875. The ones marked * have been used as the control channel so far. Again I'm using E1P8 as a test fleet map and have heard about 4 talkgroups on it. No ideas on the users yet but 301-1 has a lot of chat on it.

1126. Trunked Radio Page updated

Yahoo group: chattradio
Date: 2001-07-12 04:27:24 UTC
From: Matthew Sadler
Topic: 1126 Message: 1126

I've updated the Chattanooga trunked radio system page, located at http://www.qsl.net/kf4lhp/trunking/chattanooga.html with some new talkgroups (Erlanger EMS, Soddy Daisy Police, -new- Chattanooga Public Works, and a few others), as well as color-coding the system frequency table to indicate which frequencies operate under which callsigns.

Your comments are, as always, welcome.

1127. Chattanooga trunked radio system page

1129. Erlanger East

Yahoo group: chattradio
Date: 2001-07-22 23:50:03 UTC
From: Matthew Sadler
Topic: 1129 Message: 1129

Erlanger East has been confirmed to be using a repeater on 855.7125 MHz, DPL 343. This repeater is located on the premises. FWIW, the Erlanger trunked system that is in use at their East 3rd Street location cannot be heard there (at all).

Also, anyone on the list using Trunker to monitor trunked radio system control channels? If so, please reply to me off-list. I'm planning on having it up and running at my location within 2 weeks.

Finally, tower photos are available once again at http://www.kf4lhp.net/towers/ . Expect more photos and details on the towers in the future.

1130. Cable TV vs. Ham Radio

Yahoo group: chattradio
Date: 2001-07-24 03:34:00 UTC
From: Dewey Bryant KD4EHC
Topic: 1130 Message: 1130

From: w7wkm@...
Subject: Cable TV vs. Ham Radio Frequencies.

Greetings All:

In case you have wondered how the cable channels relate to the ham VHF/UHF bands - or even if you haven't - here's a neat little chart:

Cable Channel	Cable Freqs	Ham Freqs
18	144-150	144-148
24	222-228	222-225
57	420-426	420-450
58	426-432	
59	432-438	
60	438-444	
61	444-450	

Video carriers are 1.25 MHz above the lower edge of the channel.
Color subcarriers are approximately 3.58 MHz above the video carriers.
Audio subcarriers are 0.25 MHz below the upper edge of the channel.

Enjoy

I have, in the past, picked up the dispatcher using this frequency. Once when a chase from Chattanooga ended up in Catoosa County, Ga. THP used this frequency to communicate with Georgia Authorities, since this is one of the Georgia common frequencies.

It has been some time though since I have heard any Tenn traffic on it.

1144. Chattanooga GE trunked system

Yahoo group: chattradio
Date: 2001-08-07 20:23:08 UTC
From: Matthew Sadler
Topic: 1144 Message: 1144

Through some research, and a little listening, I've found that indeed, Tennessee-American Water is on a GE 800 MHz trunked system - but it's not an EDACS system. Instead, it is an older system using the GE MARK-V protocol, which is similar to LTR in that there is no control channel.

The two frequencies I've noted in use thus far are 856.0375 and 858.0375 MHz. There is a terribly annoying high-pitched tone on the frequencies when active, and a brief set of tones when one goes active. Not sure what the high-pitched tone is, it may be an anti-scanner tone (EDACS used to have these) or serve to pass data to radios.

Anyone on here know of any other frequencies in use on this system, or anything (at all!) about MARK-V trunking? The web is quite scarce on this subject.

Jim,

If I remember correct (need to dig out the old FCC CDs), 856-860.0375 and 856-860.0625 were, at one time, licensed to Chattanooga Communications - the local GE radio shop. I think the .0625 channels went to Nextel, and the others went to C&E.

C&E may be hanging on to the old MARK-V system, albeit with fewer channels, to appease TAWC. I'd assume they have a large fleet that would be costly to replace with Motorolas.

It bears mentioning that MARK-V trunked systems are very rare in the US these days... much rarer than even LTR trunked systems. I'm not aware of any software or trunk scanners that will decode or follow these systems.

I remember that too, and you are correct about Chattanooga Communications once having a larger GE trunked system. I used to listen to it some on my PRO 2004 - that was long before anyone thought of trunk tracker scanners. The conversations seemed to stay on the same frequency most of the time, and the annoying tones were present most of the time when no one was talking.

An article in the Messenger a week later told of a police helicopter looking
for marijuana crops. This may have been it, but I'll let LFDGAJR give more
info if he can.

It looked sorta like Lifeforce only it was black. Also I think it may have been being used by the Drug Task Force since I've heard that they were in the area doing some aerial ops.

1152. BC780XLT Software

Yahoo group: chattradio
Date: 2001-08-15 21:50:07 UTC
From: Jonathan Guy
Topic: 1152 Message: 1152
Attachments: 1 described; binary payloads are missing from this source WARC

I know several on this list have BC780XLT trunk-trackers. I've looked at several other yahoogroups and I've seen the software topic discussed. Does anyone in this area use software on a regular basis to control/program/monitor using a BC70XLT?

I'd like to be able to do the following:

1. Upload Talkgroups/AlphaTags
2. Upload Conventional Frequencies/AlphaTags
3. Upload Trunked Frequencies/AlphaTags

I know the above look somewhat obvious, but several programs I've looked at will do one or two, but not all three (usually the Talkgroups are left out). I'm really only interested in what someone actually has experience with.

P.S. Even tho the BC245XLT doesn't do AlphaTags, it would be nice if one program would control both radios.

Thanks,

Jonathan

1154. Haz-Mat Incident in Progress

Yahoo group: chattradio
Date: 2001-08-18 20:46:22 UTC
From: LFDGAJR@aol.com
Topic: 1154 Message: 1154

Just a heads up that Walker County Taskforce 10 (Haz-Mat), LaFayette Fire Department, LaFayette Sewer Department, LaFayette Water Department, Georgia Department of Corrections Fire Unit from Walker Correctional Facility, LaFayette Police Department, and Hutcheson EMS are out with a large diesel fuel spill at the Sav-A-Ton at 800 North Main Street in LaFayette. Just heard the Haz-Mat Commander (Walker 110) advise that they have an estimated in excess of 100 gallon spill. Have also heard them talk about calling in Environmental Protection. The follow frequencies have been active with traffic from this incident as of 1640 hours on 08.18.2001.

154.175 - Walker County Emergency Services Primary
155.160 - Walker County Emergency Services Tac-4 (Seem to be using this for Haz-Mat Ops)
155.310 - Police Operations (Primary Dispatch Frequency for all Police Departments in Walker County)
154.980 - LaFayette Utilities (Heard Water and Sewer Departments as well as Fire Department and Haz-Mat personnel discussing diesel in the sewer.)
153.740 - Georgia Department of Corrections (Heard Dispatcher from Walker CI talking to the fire units on the scene.)

Yahoo group: chattradio
Date: 2001-08-18 20:50:49 UTC
From: LFDGAJR@aol.com
Topic: 1155 Message: 1155

Not really related to the actual Haz-Mat incident, but just heard that Walker Correctional Institute Fire Units (Company 8) are being sent to a structure fire on Truman Street in the City of LaFayette. So I assume all Correctional Fire Units are being removed from the Haz-Mat to be used at the structure fire.

Thanks for the Walker incident info. Curious, what are the other Walker Emergency Services freqs? The reason I ask, is that the last time I saw all the county fire/rescue units, they had lo-band whips on them. Just like the six foot whips on THP cars. Does Walker use a vhf-lo repeater?
What is their f-2/f-3? Does 155.160 cause interferance with Whitfield County?
Thanx..John

Ok here are the Walker County Emergency Services frequencies that I have in
my files.

154.175 -- Dispatch (All County FDs, Rossville FD, Lookout Mtn. FD, Hutcheson
EMS, and all special units (haz-mat, cave cliff, etc.)

153.830 - Tac-3 Fireground (Used especially around areas where 155.160 may
cause interferance such as near Whitfield County line.)

155.160 - Tac-4 Fireground (Simplex) / Tac-8 Unit to Unit (Repeatered)

154.280 - Mutial Aid

154.430 - Catoosa Fire and Rescue Primary (used by Walker Units to
communicate with Catoosa 911 in the event they are responding on mutial aid
to their county, etc.)

155.400 - Hutcheson EMS Tac-2 Unit to Unit

158.310 - Reichold (used by Emergency Services units to communicate with
Reichold Security and First Responder units in the event of an emergency at
the plant.)

460.5875 - Not really sure what this frequency is used for by Walker
Emergency Services. I personnally have never heard it active.

465.5875 - Same as 460.5875

45.560 - Walker County Commissioners Office (Also used during major
emergencies in the county to communicate between the Commissioners Office and
Emergency Management.)

These are the frequencies I have listed for Walker County Emergency Services.
A note on the way radios are set up in the fire units. Channel 1 receives
on 154.175 and transmits on the "north end" repeater input and channel 2

receives on 154.175 and transmits on the "south end" repeater input. Also as I mentioned in the frequency list 155.160 can interfere with Whitfield County so it is not suppose to be used close to the Whitfield County line. Also, in some parts of the county it is possible to hear Paulding County Georgia Fire Units on the Dispatch frequency although I don't believe either agency actually "interferes" with the other.

Hope this helps,
Christian KF4ZMB

Thats correct my bad I missed keyed it. Sorry for the goof up. Also, I got my ID of "County Commissioner" from an older Walker EMA manual that I looked at at the library. Thanks for giving me the new information on these channels. I haven't had them in my scanner so I wasn't really sure what was going on on them. By the way, do you happen to know what frequency the Walker County Enforcement Units from the Commissioners Office are dispatched on? Or what frequency the Animal Control units are dispatched on?

Thanks,

1160. Who's the PW on 153.860

Yahoo group: chattradio
Date: 2001-08-21 14:00:13 UTC
From: Larry Van Horn
Topic: 1160 Message: 1160

I have been trying to figure out who I have on 153.860 MHz for quite some time now. I have a public works department apparently in Georgia. My best guess is KDE 217 City of Calhoun (153.860/156.000) but that licensee in the FCC database is to the Fire Chief. Can anyone close to Gordon County confirm if this PW frequency is a Public Works type local government freq?

73 all and good hunting,

From: Matthew Sadler
Topic: 1154 Message: 1161

Don't know what frequency the Walker County Animal Control people are dispatched on (I'd imagine one of the Sheriff's channels), but Catoosa County's recently got their own frequency: 155.8875 MHz, simplex. Unknown PL/DPL.

IIRC, on the Tac 4/Tac 8 repeater, 153.800 is the input, and the PL is either 114.8 or 118.8. Been a while since I saw the sheet with that info on it.

And, of course, 45.560 is Georgia Emergency Management Agency.

The 451.325 is a nationwide construction crew frequency. One can talk over the repeaters from Atlanta to Spokane by accessing each repeater along the way. All the repeaters are accessed by touch tone pads on their radio's. Normally, you will hear one or two TT's before the carrier is dropped (that is one of the technicians knocking down the repeater). They use this system since there are still parts of the US that do not have cellular service (and yes, they do use the AT&T cellular/pcs system).

I just looked at the Incident Page Network Site.
http://www.incidentpage.net/

Are there any subscribers in this group? Do you like the service? Many years ago I subscribed to FireNet Paging through ARCH (or their predecessor). I wasn't really happy with the service, (ARCH was fine, I refer to the subscription). I quickly tired of all the barn fires in the Northeast.

Just curious,

Jonathan

Does anyone know which Police Department uses this frequency?

I know Dunlap PD is licensed, but I don't think I'm hearing them in Chattanooga. I've heard 819, 831, 817, 839 and 173 as unit numbers, all in about 10 minutes. They call dispatch "Central"

I'm thinking probably a Georgia Dept.

B-A-M has apparently started to carry Scanning USA. I've seen this magazine before, but not in Chattanooga. I just picked up a copy of the August 2001 edition. SUSA is 32 pages cover to cover, and cover priced at $2.95.

Articles include:

User Report: The NEW Icom IC-R3 Receiver (I thought it had been out for awhile)

8 Hot New Hand Held Reveivers (Not necessarily new to the market, but currently available)

A short intro of the new Radio Shack PRO-93 and PRO-2067 Trunk Trackers (GRE units)

Spectra Railroad/Locomotive Radios

Spotlight on the Hampton Roads area of VA

Scanning Canada, Ottawa and Nepean Police

For the money, it is only 32 pages, an enjoyable read. I'll look at each issue before I buy to make sure there is something I'm interested in.

On another note, I noticed B-A-M has also started to carry Monitoring Times. Yippeee!!! my discount card will get me 10% off, Barnes and Noble is full list.

(Yes Larry, I know a subscription is less expensive, but any mailed magazines to my house end up shredded.) :)

That's why MT is in plastic now. No shredded magazines.
Glad you enjoy MT. Scanning USA's subscription is 24.95 a year for 12 32 page issues.
You can find out more at http://www.scanningusa.com/

...there's a car accident outside your house, and instead of rushing outside to offer assistance, you rush into the radio room to hear it being dispatched on the scanner.

...you know what fire station is being dispatched by listening to the pager tones.

...you start reading plates by the police phonetics.

...you quickly translate a vanity plate read in phonetics.

...you have a 'favorite' dispatcher.

...you curse the newspaper for not printing anything about what you heard last night.

...you know at least 15 vehicle/penal code sections.

...you yell at TV shows that use scanners in place of 2-way radios. (hello 'Starskey & Hutch'?)

...you promise to sell your old scanner when you upgrade, do you find a convenient use for it SOMEWHERE?

...you can rattle off at least 10 local PD/Fire freqs by memory.

...you put off everything on Saturday night to see "COPS".

...you have twin spotlights on your car.

...you ever slipped and said '401' when taking lunch, and you're an accountant.

...you know exactly when you are leaving one 'beat' and entering another.

...you ever forgot to answer your telephone because you thought it's the scanner picking up on another phone call.

...you answer the scanner when the officer/fire/medic crew asks for the numerics on their call.

...you run out of room on your belt to carry your handhelds at the hamfest.

...you frequently chat with the little old ladies at the beauty shop to try to confirm gossip you hear from people's cordless phones.

...you've got more antennas on your car than the Command Post Van.

...Officers ask you to program their new trunk tracker.

Topic: 1180 Message: 1181

It is probably the IF that is causing it. I had a Bearcat 560 XLT and when I would fire up 154.8000 I got air traffic. If I recall, the IF on some scanners is around 21.7? If so, just subtract that from 154.8 = 132.1 and plug that into your scanner (the actual IF may be different), and you will probably hear the same air traffic. There is only two cures for that - 1 get a better scanner or 2 use professional gear.

I second Michaels thoughts! 132.100 is Atlanta Center, so that's why so
much traffic is beign heard on 154.800!

1183. Prater's Mill Hamfest

Yahoo group: chattradio
Date: 2001-09-06 22:22:38 UTC
From: Jim Knight
Topic: 1183 Message: 1183

I just found on the Web that the Prater's Mill hamfest is this Saturday, Sept. 8. Does anyone know if this is correct?

1184. Re: [chattradio] Request 154.8000 Frequency Help

Yahoo group: chattradio
Date: 2001-09-06 22:38:22 UTC
From: Jim Knight
Topic: 1180 Message: 1184

Just so we stay technically correct, you need to subtract (or add) double the IF to find where images will show up on a single conversion receiver. So if the IF is 10.7 (as many, but not all, receivers use) then the figure to add or subtract is 21.4. For 21.7 to be correct the IF would have to be 10.85. I don't remember ever seeing this particular value for an IF but it's certainly possible.

1188. Two Updates

Yahoo group: chattradio
Date: 2001-09-12 20:10:45 UTC
From: Matthew Sadler
Topic: 1188 Message: 1188

Two updates to the KF4LHP.Net website:

1) The FAA's ground stop order continues as a result of the terroristic acts in both New York City and Washington D.C., and this includes Chattanooga's Lovell Field. I have recorded the ASOS broadcast going out over 119.850, and if you cannot monitor it, please go to http://kf4lhp.net/ to listen in on it.

2) I have made some minor updates to the Chattanooga Trunked Radio System page, at http://kf4lhp.net/trunking/chattanooga.html . Among other things, I am trying to note talkgroups where encryption has been noted in use - there is a new column for this, and you'll see a small padlock icon there to note that. If you know for certain talkgroups where encryption has been used, please let me know and I'll update the page to reflect that.

Remember that at the bottom of each page, I have placed a footer that, among other things, notes the date of last revision, so you can tell how current the information is.

1193. Hamilton County Fair

Yahoo group: chattradio
Date: 2001-09-29 15:12:37 UTC
From: Matthew Sadler
Topic: 1193 Message: 1193

Time for the obligatory note on what seems to be in use at the County Fair
(never mind that it's only been open for about 2 hours or so):

Talkgroups on the Chattanooga TRS:
20624 - Rural Transportation
18768 - Disaster 3
21392 - Chester Frost Park
20496 - County Parks 1
20752 - Mutual Aid 2
19952 - ? (command post talking to Dallas Bay VFD units)

"Conventional" Frequencies:
145.390 - CSQ - W4AM Repeater - Hamilton County R.A.C.E.S.

More updates as I find them.

1194. Nuclear Emergency Exercise

Yahoo group: chattradio
Date: 2001-10-01 15:37:55 UTC
From: Matthew Sadler
Topic: 1194 Message: 1194

http://www.chattanoogan.com/articles/article_13270.asp

The Chattanoogan reports that Hamilton County is planning a multi-agency exercise on Wednesday, October 10th at 7:45 a.m. at the VAAP off of Bonny Oaks Drive involving a response to an 'incident' involving non-weapons grade radioactive materials.

Agencies involved will include: HCES, HCSO, CFD, CPD, TDOT, TVA, TEMA, FEMA, DOE, and quite a few others, in addition to local area hospitals.

Ought to generate some traffic on some little-used frequencies for TVA, TEMA, and other state/federal agencies, plus, maybe light up some new talkgroups on the city trunk?

FWIW, CFD is now working an incident at CARTA (reported to us by one of our own list members) involving a "suspicious package" and the haz-mat teams are on-scene. From drills to the real thing, maybe...

It was a drill that they held at the VAAP to simulate an accident involving the release of non-weapons grade radioactive materials.

From a post on October 1:
http://www.chattanoogan.com/articles/article_13270.asp

The Chattanoogan reports that Hamilton County is planning a multi-agency exercise on Wednesday, October 10th at 7:45 a.m. at the VAAP off of Bonny Oaks Drive involving a response to an 'incident' involving non-weapons grade radioactive materials.

Agencies involved will include: HCES, HCSO, CFD, CPD, TDOT, TVA, TEMA, FEMA, DOE, and quite a few others, in addition to local area hospitals.

1201. New talkgroups on Chattanooga System

Yahoo group: chattradio
Date: 2001-10-10 23:50:41 UTC
From: Jim Knight
Topic: 1201 Message: 1201

22288 is an animal control group, probably Hamilton County from the addresses they have been giving out. 17616 is Chattanooga animal control.

22416 is UTC police as Matthew has also reported. Heard them ID today.

21680 had a discussion of a heat pump. Since this is the next talkgroup up from Engineering 1 (21648) my guess is Engineering 2. Can anyone confirm?

18096 is probably Hamilton County Schools - don't know the function of this particular group but I heard them discuss dropping something off at Tyner High School, and it's one up from 18064, Hamilton County School transportation.

I also heard activity on the following groups today. It's possible some may have been improperly displayed, but they are all valid group numbers in that they are odd multiples of 16:
20560
16912
16720 - mention Wilcox Blvd.
20880

If anyone has further info on any of these, please post.

1202. Emergency Exercise

Yahoo group: chattradio
Date: 2001-10-10 23:57:08 UTC
From: Jim Knight
Topic: 1202 Message: 1202

Much of the exercise traffic today was on Disaster 2 (18736) and Disaster 3 (18768). A radiological van from Sequoyah also participated and was heard on the TVA REP frequency, 172.65. I noticed that the TVA people were very careful to say "this is a drill" with each transmission, but the people on the Chattanooga trunked system were NOT. They went for a long time as if it was absolutely real and only occasionally mentioned "the exercise". It makes me wonder how many calls they got from scanner listeners who thought it WAS a real incident.

1204. Surplus Motorola Maxtracs for auction

Yahoo group: chattradio
Date: 2001-10-11 15:18:31 UTC
From: Matthew Sadler
Topic: 1204 Message: 1204

City of Chattanooga, TN has a large quantity of UHF Motorola Maxtracs for auction. They are being offered in lots of 5, all inspected by radio technicians, for a starting bid of $375 per lot. Model number is D44MJA77A3_K, these are 40 watt, 449-470 MHz radios with 6 channels.

http://www.govdeals.com/eas/itmDisplay.cfm?itemID=17&acctID=21

That's the address for one lot, there are quite a few lots available.

1205. Tarmac Express ClubRally

Yahoo group: chattradio
Date: 2001-10-16 20:42:16 UTC
From: Matthew Sadler
Topic: 1114 Message: 1205

The Chattanooga Region of the SCCA (Sports Car Club of America) will be putting on the third, and final, Tarmac Express rally of the year on Saturday, November 3rd, at the Volunteer Army Ammunition Plant site off of Bonny Oaks Drive. If you are a licensed ham operator, we would love to have you out there, especially if you are thinking about volunteering at the Cherokee Trails Rally next year.

We will be using amateur radio again to provide communications at the event for safety purposes, and for the rule sticklers, SCCA and the Chattanooga Region SCCA are both non-profit organizations (and believe me, CR SCCA is making no money off of these rallies). Having amateur radio is vital to us being able to safely organize and run the rally.

If you are interested, please visit:
http://www.rivergate5speed.com/forms/tarmac-staff.html
and fill out the form, ensuring that you note your callsign in the designated space so we know you are a ham when you sign up. If you have prior experience with any other rallies, please make a note of that and the position you worked so we can more appropriately place you.

For more information on the rally, please visit:
http://www.rivergate5speed.com/rally/te01-home.html

Note that lunch will be provided free of charge (!) and when the rally is over, after dark, we will provide staff rides, where you can don a helmet, climb in a rally car and hook up the five-point harness and see the event from a competitor's point of view.

If you have any questions, please feel free to email me directly at mws@... .

1209. Hutcheson Medical Center, and Jones Brothers

Yahoo group: chattradio
Date: 2001-10-23 19:09:51 UTC
From: Matthew Sadler
Topic: 1209 Message: 1209

Two notes to pass along:

Jones Brothers Construction appears to have discontinued use of the 456.325 repeater they were using during the I-75/TN 153 project. But, they appear to have popped up on 464.800, PL 114.8. 464.800 is a community repeater licensed to Telecom Network (see http://www.telecomnetwork.org/).

Hutcheson Medical Center has two new on-site repeaters, licensed under FCC callsign WPSF402. They are:
153.020 out, 158.385 in, PL 141.3
153.155 out, 159.765 in, PL 136.5

153.020 appears to be maintenance, and 153.155 appears to be security. But, of course, I could be wrong.

Also, Hutcheson has (finally) licensed their 155.340 station under FCC callsign WPTC844. Steve Robeson, K4YZ, pointed out in 1999 that their license on that frequency had expired many years ago, but they've gotten a new one at this point. 155.400 is still licensed and is used for paging.

1213. Uniden Announcement

Yahoo group: chattradio
Date: 2001-10-30 19:35:44 UTC
From: Jonathan Guy
Topic: 1213 Message: 1213

I found this on another list:

Uniden America Corporation
4700 Amon Carter Blvd.
Fort Worth, TX 76155
www.uniden.com

Uniden America Corporation is now developing an APCO 25 digital scanner model, which is slated for distribution in the fourth quarter of 2002. To date, and contrary to industry rumor, Uniden has received no requests from the FCC or any federal, state, or local authority asking the company to delay or halt development of this or any other Uniden product.

It is important that the public understand the nature of APCO 25 scanner technology, which allows users to pick up ordinary digital signals such as those now used by police and emergency officials in a few large US cities including, for example, Los Angeles. Scanners such as the APCO 25 model in development by Uniden do not facilitate the decoding of any encrypted transmissions including transmissions by national security and law enforcement authorities such as the CIA, DEA and U.S. Special Forces Units.

Uniden at this time does not anticipate receiving any requests to alter its product-development schedule on any APCO 25 digital scanner units.

1216. Trunker

Yahoo group: chattradio
Date: 2001-11-06 06:05:26 UTC
From: Matthew Sadler
Topic: 1216 Message: 1216

I've been running Trunker for about a month now... for those of you who are unfamiliar with it, Trunker is a program that logs talkgroup IDs and individual radio IDs on a Motorola trunked system, and displays all of that "stuff" in real time on a PC. Very cool little FREE program, but you need a data slicer and a modified scanner to use it.

See http://www.trunkedradio.net/ for more information; click on the Trunker link on the left-hand side. There is another "version" called ETrunker for GE EDACS systems, but we don't have any of those around (we of course do have that awful MARC-V system, but there isn't anything out for those, nor is that likely to happen - ever).

Just as an FYI to the group, Trunker has thus far identified 150 talkgroups and 2,529 individual radios on the Chattanooga system (there are some caveats, but I don't feel like explaining them right now). That's a lot of radios.

From: Chris Palmgren
Topic: 1219 Message: 1220

Jim,

I tuned in to hear Art Bell last night, but I had to tune to one of the 50kw AM stations (I believe I was listening to WTAM 1100 out of Cleveland, OH) to hear the show because WGOW 102.3 was off-the-air. There was a lot of noise on the 102.3 signal shortly before midnight when I was listening to them in the car. Obviously, they've experienced some major component failures at the transmitter site near Soddy-Daisy.

Hopefully they will be back on-the-air with full power soon. In the mean time, I'm hearing WQTU out of Rome, GA, on 102.3.

1224. Forest Fires

Yahoo group: chattradio
Date: 2001-11-08 19:25:52 UTC
From: Matthew Sadler
Topic: 1224 Message: 1224

With all of the forest fires going on in Southeast Tennessee, Tennessee Division of Forestry's network of repeaters has been getting quite a workout.

Dunlap repeater is on 159.015 MHz, Etowah repeater is on 159.135 MHz, and both use a PL of 127.3 Hz. They are linked full-time by 900 MHz microwave. I would speculate that there are others (159.315 MHz is at Fall Creek Falls, but I've never monitored it).

122.925 MHz, in AM mode, is also in use for air to air communications. Air assets include a large air tanker, two helicopters with buckets, and some spotter planes. There have also been fires in the Cherokee National Forest along the Tellico River, so I would imagine that their frequencies have been active too (168.025 MHz repeaters, 169.925 MHz repeaters, and 168.625 and 168.650 MHz simplex).

The local volunteer departments are probably assisting and their frequencies would be in use for the efforts.

If anyone else finds any frequencies in use, please post them to the list.

1229. Woods fire on Signal Mountain

Yahoo group: chattradio
Date: 2001-11-14 20:54:46 UTC
From: Matthew Sadler
Topic: 1229 Message: 1229

Signal Mountain Fire is working a woods fire on the mountain right now, and a water main break isn't helping them any in their battle.

Tennessee Division of Forestry is on scene (see earlier messages for their frequencies, they are using both Starr Mountain and Dunlap/Signal Mountain repeaters since along the brow the Starr Mountain repeater can be picked up better), and Chattanooga-Hamilton County Rescue, East Ridge Fire, Red Bank Fire, Walden Ridge Emergency Service, Dallas Bay VFD, Highway 58 VFD, and others are on scene or staging to assist. There are some other agencies en route or on scene too.

Frequencies:

Chattanooga Trunked Radio System:
18672 - Signal Mountain Fire
18608 - Hamilton County Emergency Services Operations Channel

VHF-HI Band:
154.280 - Fire Mutual Aid
154.445 - Walden Ridge Emergency Service

Reportedly, the fire can be clearly seen from the Chattanooga Airport...

I heard a bit of activity concerning the fires on 168.775 around 12:15 pm.
A female vice was giving directions, and said helicopters were active.

1231. New frequency in use on local trunked system

Yahoo group: chattradio
Date: 2001-11-20 00:15:54 UTC
From: Jim Knight
Topic: 1231 Message: 1231

I previously reported in this group on finding a 4 channel trunked system consisting of *857.8375, 856.8375, *858.8625 and 860.8875. This system has now added a fifth frequency, *859.7875. The ones marked with * rotate as the control channel. I am using E1P8 as the fleet map which seems to work OK. The most active talkgroup is 500-2 which appears to be a company that delivers and picks up large dumpsters.

1232. Recommend which scanner?

Yahoo group: chattradio
Date: 2001-11-22 17:04:44 UTC
From: chevythang84@aol.com
Topic: 1232 Message: 1232

I want to purchase a 800 Mhz trunking scanner to be used for just listening to the police. I want the cheapest one that will work good for this only. I previously had a pro-91 and liked it because it had seperate banks that I used for chattanooga police, or county police. Which scanner would anyone recommend for me? Thanks

1233. LTR Trunked System in Dalton, Georgia

Yahoo group: chattradio
Date: 2001-11-22 22:15:47 UTC
From: Matthew Sadler
Topic: 1233 Message: 1233

Communications & Electronics, the local Motorola two-way shop, now has an LTR trunked system on the air in Dalton, Georgia on UHF. The system can be heard pretty well up here in Chattanooga too, so you might want to give it a listen, especially if you have one of the trunktracking scanners that will work on LTR.

Information is available at:

I'd stick with the Uniden products, especially the BC245XLT. The GRE products seems difficult to program and more complicated to use when you need to lock something out or change what you're listening to on the fly. I've always liked the GRE scanners the best, but not for trunking.

Just my 2 cents, YMMV.

The BC780 is not the cheapest, but it has the big advantage that you can give the talkgroups names so you can see "Adam Dispatch" on the display instead of "16432". Of course if you keep a talkgroup list handy you can get along without the names, but they sure are handy. The other thing to consider is whether you want a handheld or base unit. For a handheld I'd recommend the BC245. For a lower cost base unit, the BC895 is good but it won't do EDACS or LTR. Again if you only want to listen to police an 895 might be a good choice.

I have both the BC780 and the BC245....both are great!!!...I would highly recommend purchasing the computer control software that goes with these units....it makes a fairly complicated programming routine much simpler...also much easier to alpha tag talkgroups and frequency lists in the 780....I am using WinScan780....nd haven't figured out how to use all the features yet..it does more than I know how to make it do....including listing new talkgroups and new active frequencies while you are not listening.

Following the lead of some other scanning sites around the country, I've registered scanchattanooga.com for my website. This easy-to-remember address gets you to the same place that kf4lhp.net goes, but, like I said, it's certainly easier to remember and to pass along to others.

I've added notes on some other commercial trunked systems to the website, and updates and improvements will continue. Your comments are, as always, welcome and appreciated. In particular, if you have any photos of fire trucks, ambulances, police cars, or other vehicles for any of the noted agencies (that are your photos - please don't steal other people's pictures!), and you don't mind me using them, please forward them to me off the list (at mws@...), as I would like to add some pages with photos of the vehicles used by the different departments. You WILL receive credit - unless you don't want credit!

1243. Olin Chemical

Yahoo group: chattradio
Date: 2001-11-28 05:47:49 UTC
From: elliston@ix.netcom.com
Topic: 1243 Message: 1243

I recently moved to a home in the Charleston, TN area. It's a great monitoring location. It belonged to a physician who was an avid ham. I'm sure that his hobby was a major factor in selecting the location.

Unfortunately, we're only a couple of miles away from Olin Chemical's facility. If those folks have an emergency, I'd like to know about it as early as possible so the family and I can head south. I would prefer not to wait until I hear sirens!

I've programmed into my scanner the 20 or so frequencies listed in the FCC database for Olin. I'm trying to determine which ones to monitor for the earliest news of any emergency.

If anyone has already done this, I'd appreciate any hints.

From: Matthew Sadler
Topic: 1243 Message: 1244

I have the following frequencies all noted as in use (from a reliable source) but do not have any information as to what they are used for - all are simplex unless otherwise noted:

151.775
153.050
153.125
153.200
153.275
153.425
158.235 (this is a repeater)

All were noted with a PL tone of 123.0 Hz.

Of course, you also have Bowater, producer of fine newsprint (quite a bit of which is bought by the Chattanooga Times Free Press), who is licensed for, quite literally, a dozen UHF repeaters on-site.

1246. NEXTEL - CLEVELAND

Yahoo group: chattradio
Date: 2001-11-29 04:55:45 UTC
From: elliston@ix.netcom.com
Topic: 1246 Message: 1246

According to the FCC database, NEXTEL was issued a license on August 7 to operate a trunked SMR from the Crown Colony transmitter site in Cleveland. Callsign is WPSX974. If anyone is not familiar with the Crown Colony site, it's that huge collection of antennas behind the Holiday Inn at Exit 25 off I-75. As far as I can tell, this SMR is not yet active. Since there are 340 licensed frequencies, it's quite possible I've overlooked some activity. Does anyone have any information about when and whether this system will be up and running? Is it likely to be a Motorola Type I with the usual E1P8 fleet map?

Topic: 1246 Message: 1247

It'll be an iDEN site (the digital two-way/text paging/cell phone deal) - Nextel isn't building any more analog trunked systems.

They do have an active analog trunked system up on Oswald Dome (east of Benton) that uses that E1P8 fleetmap; Bradley County Sheriff's Office has access to this system and they refer to it as "system 2" (or I think that's what they call it).

Matthew,

You're exactly right about the BCSO System 2. I've been monitoring it for about a year. From my new location here in Charleston, I get excellent reception from the Oswald Dome facility. Receiving it in the car while driving around the Cleveland area is a real challenge. Talkgroup Id for BCSO System 2 is 089-2. Talkgroup Id for A & K Cab in Cleveland is 149-2. I've saved about 30 other active talkgroup Id's, but I haven't identified any of them. Seems to be mostly agricultural. Lot's of talk about cows :)

1249. Broadcasters

Yahoo group: chattradio
Date: 2001-12-03 04:24:25 UTC
From: Matthew Sadler
Topic: 1249 Message: 1249

Group,

I'm adding some new pages to the website listing all of the different TV, AM and FM broadcasters within 50 miles of Chattanooga (or so) - thus far, the TV page is semi-completed and I am starting to work on the others.

Please visit http://www.kf4lhp.net/broadcast/tv.html to check out the TV page. In particular, if you can help me out with affiliations for some of the low power stations it'd be a big help. Or, if you see any obvious errors, please let me know. All of the data (latitude, longitude, power, owner, etc.), except the network affiliation, came straight from current FCC records.

For reference, a translator (which you will see mentioned on that page) is basically a repeater for the FM or TV broadcast services - it receives a signal on one channel or frequency and spits it back out on another. Sometimes they will receive their feed off of a satellite, sometimes it's from another nearby (relatively speaking) station.

1252. 2001-2002 Winter Weather Listening List

Yahoo group: chattradio
Date: 2001-12-04 20:48:46 UTC
From: Matthew Sadler
Topic: 1252 Message: 1252

So it is 70 degrees outside as I'm typing this, but sometime soon it'll start getting cold, snow (or more likely ice) will start falling, and Chattanooga will come to a complete standstill. Then you'll be glad you have this list.

There have been quite a few changes this year in the public works/roads listings, but the rest remains more or less the same. I have included all public works and roads departments, utilities which use above-ground facilities (electric, cable TV - which IS a utility! - and telephone), and schools. Schools are one that sometimes gets overlooked but their frequencies do tend to be somewhat active at nights when inclement weather is expected as bus drivers and administrators patrol the roads, seeing if it is safe for the buses to run their routes in the morning.

Corrections and comments - and particularly additions - are welcome. Just post them to the list, or email them to me direct. For more information, you can also visit http://www.scanchattanooga.com/ .

If you use a fixed-width font (like Courier) when you view or print this, it will line up nicely.

Utilities---

Date: 2001-12-05 01:06:19 UTC
From: Carr Fred
Topic: 1252 Message: 1253

Since I'm the guy that does the school decisions....you can monitor us on the bus repeater 154.055 (output). We get out about 3:00AM and run the roads all over the County....there are about seven of us taking different parts of the County.....we sometimes use 800 trunked (18064), but we don't have enough of these radios yet (due to budgets), so we usually use VHF.

I use this listening list also to help make decisions....thanks Matt for collecting.

1254. Erlanger / LifeForce Radio Changes

Yahoo group: chattradio
Date: 2001-12-07 02:57:19 UTC
From: Matthew Sadler
Topic: 1254 Message: 1254

Erlanger is in the middle of making some big changes to the radio system used by LifeForce, so here's where they're at and where they're going...

Three new repeaters have been installed, replacing all of the old ones. There is one repeater each at Erlanger, Signal Mountain, and Hinch Mountain (near Crossville):

Erlanger: 463.000 (Med 1), PL 136.5
Hinch Mountain: 462.950 (Med 9), PL 162.2
Signal Mountain: 463.050 (Med 3), PL 136.5

Flight crews will be paged out on the Erlanger on-site repeater when new portable radios arrive, and all of these stations are now full repeaters - no more split frequency operation.

Also, reports to the emergency departments of both Erlanger and T.C. Thompson will be on the Erlanger repeater, but Flight Operations has the ability to turn on and off those radios, and they will be kept off unless they are being given a report from one of the birds.

1255. Rick's Lock & Key

Yahoo group: chattradio
Date: 2001-12-07 23:06:10 UTC
From: Jim Knight
Topic: 1255 Message: 1255

Rick's Lock & Key is using talkgroup 001-1 on the Chattanooga Communications trunked system (assuming fleet map E1P1). I have known from conversations that this TG was a locksmith. Today I heard them on the way to the Wal Mart in Soddy Daisy, drove over there and saw the truck drive up to the locked car. I even saw the driver talk into his mike at the same time his voice came over the radio. Nailed another one!

1256. I am now on thanks

From: richard4537312
Topic: 1259 Message: 1259

I presently have BC100XL, BC200XLT, RS Pro91 and RS Pro94(earliest version) scanners. Santa might bring a RS Pro92. I understand that a company called GRE America, Inc., makes this model. I'm not familiar with this company. Can anyone tell me anything about the quality of their products? Also, what model number do I need to look for on the Pro92 to be sure I am getting the latest version?

Richard

1260. RE: [chattradio] RS Pro92

Yahoo group: chattradio

From: Jonathan Guy
Topic: 1259 Message: 1260

Radio Shack scanners are produced by Uniden and GRE. Most folks are familiar with the Uniden product line produced under their own label. GRE, as far as I know, doesn't retail a line under their own label.

GRE has brought us fine scanners like the base PRO-2004, 2005, 2006, 2035, 2042, etc and handhelds like the PRO-34, 37, 43, 60, etc. These are the top of the line scanners used by serious hobbiests for years.

I've always been partial to the GRE conventional scanners. I have to say that Uniden has the edge on GRE for trunk trackers right now. Notice I said "an edge", I don't think the newer GRE's are very far off of the BC-245 Uniden models. You'll do well with either manufacturer.

1261. Re: [chattradio] RS Pro92

Topic: 1259 Message: 1261

On the back, next to where it says PRO-92 on the label, it may also have an A inside a triangle, or a B inside a square. The B version has the latest firmware, version 3.28. The A version has version 3.25, and the one without a letter has version 1.00.

It's worth mentioning that if you can lay hands upon one, when you turn it on, press the 3 button and it will display the firmware version it has. Grove Enterprises purchased a large quantity of the original PRO-92 scanners and upgraded them to 3.28 and resold them (which is what I have), so the label is merely an indication of what firmware it shipped with when it left the factory. It may well have been upgraded (Radio Shack would also let you send them in to the service depot and they would upgrade them for a fee).

The higher firmware versions improved the trunk-tracking abilities with heavily-used Motorola systems, so a newer firmware radio is a good thing.

Topic: 1270 Message: 1270

Any radio traffic on this?

(LaFayette-AP) -- After unsuccessfully fighting a landfill fire with water for two days, Walker County officials have turned to other means to squelch the blaze.
Walker County fire Chief Randy Camp says his crew has been spreading the debris with a bulldozer and backhoe to uncover pockets of fire at the site near Chattanooga Creek.
Workers also are hauling in dirt and spreading it over the five-acre area to smother the flames.
County emergency services director David Ashburn says because the fire is so deep, they are putting four to six inches of dirt on it. He says that appears to be working, but it may be days before the fire is out completely.
The blaze started Sunday night when a car stolen in Chattanooga, Tennessee, was abandoned and set on fire.

From: richard4537312
Topic: 1272 Message: 1272

I recently moved from Cleveland to the Charleston (Walker Valley) area of Bradley County. New home is a great monitoring location, but I have almost lost my reception of the Hamilton County / Chattanooga TRS due to the increased distance. Using the higher performance rubber ducky that Radio Shack recently introduced, I can lock onto the control signal using either the Pro91 or the Pro94. The poor signal quality makes it very difficult to understand the conversations. I think the solution is probably to erect an outside antenna. The outdoor scanner antennas available at the Shack just don't look very impressive. Does anyone have any suggestions?

For 800 MHz reception, go get a magnetic-mount cellular antenna. It's what I use and provides excellent reception of 800 MHz (just like it should). It also provides good performance on VHF-HI and UHF (in Brainerd, I can pick up Bradley and Rhea county repeaters no problem). Performance on VHF-LO is poor, but that's to be expected and there aren't many users down there, other than THP.

1277. Nextel Commercial TRS

Yahoo group: chattradio
Date: 2001-12-20 00:32:57 UTC
From: Jim Knight
Topic: 1277 Message: 1277

Thanks to some good detective work by Matthew KF4LHP, and some mathematical analysis on my part, we are revising our information on what we used to call the Chattanooga Communications trunked system. For a reminder, the frequencies used by this system are 851.0125, 851.2375, *851.5875, *852.6375, 852.9625, *853.8625, 854.2875, 854.3125 and 862.2125. Previously we guessed that this system was run by Chattanooga Communications and had a fleet map of E1P1. Due to Matthew's detective work and my analysis we now think this system is run by Nextel and has fleet map E1P8. The following talk groups are used frequently on the system:

301-1 AAA Courier
068-1 Rick's Lock & Key
110-1 United Wrecker
124-1 Angel EMS

Matthew will soon be adding a page to his web site to include this and any other information we gather on this system.

No, they're still on low band... monitoring them as I write this, matter of fact.

The only public safety trunking system in District 2 is Chattanooga's, which only covers Hamilton County. Low band does require a large, outside antenna for reliable reception, I've found.

Topic: 1283 Message: 1284

Check Wal-Mart, Target, Radio Shack, etc. for mag mount cell phone antennas. You need to check multiple places because (at least when I got a couple of them) the prices vary widely between stores. Then get a TNC to BNC adaptor from Radio Shack (or a hamfest if you are going to one soon enough) and you are ready to go. Come to think of it, if you are going to a hamfest anytime soon, you might be able to find a cheap secondhand cellphone magmount there. I use one on each of my vehicles and they work perfectly for trunked systems and even do a decent job on VHF and UHF non-trunked stuff.

1288. TVA Low Band Bandplan

Yahoo group: chattradio
Date: 2002-01-02 19:39:57 UTC
From: Larry Van Horn
Topic: 1288 Message: 1288

For those of you who do VHF Low Band skip and all my friends over at Chattanooga, here is an anonymous message I received via email over the weekend. If the person who sent this material to me is on VHF Skip or Chattradio -- thanks for the message.

Here's a list of what's programmed in a TVA Vertex VX-510 handheld. All frequencies are simplex. listed by channel #, name, freq, pl tone. this is only about a year old.

1 - BGRE - 40.610 - 250.3
2 - CLEV - 40.430 - 250.3
3 - CHAT - 40.530 - 250.3
4 - CLMB - 40.570 - 250.3
5 - HUNT - 40.310 - 250.3
6 - JCKS - 40.650 - 250.3
7 - JCTY - 40.370 - 250.3
8 - KNOX - 40.770 - 250.3
9 - MFLD - 40.370 - 203.5
10 - MEMP - 40.430 - 203.5
11 - MBRO - 40.730 - 250.3
12 - MSHL - 40.690 - 250.3
13 - NASH - 40.830 - 250.3
14 - TPLO - 40.610 - 203.5
15 - WPNT - 40.730 - 203.5
16 - CON1 - 40.490 - 250.3
17 - CON2 - 40.870 - 250.3
18 - CH18 - 40.870 - CSQ

Enjoy all and let me know what you hear on any of these.

73 all and good hunting,

1290. Re: [chattradio] TVA Low Band Bandplan

Yahoo group: chattradio
Date: 2002-01-03 02:02:37 UTC
From: Matthew Sadler
Topic: 1288 Message: 1290

Very interesting! I heard some traffic on the 40.53 frequency about two months ago, and the PRO-92 noted that 250.3 Hz PL tone.

Guess we'll see this in Fed Files in an upcoming issue?

My guesses about the abbreviations:
BGRE: Bowling Green, KY (?)
CLEV: Cleveland, TN
CHAT: Chattanooga, TN
HUNT: Huntsville, AL (?)
JCKS: Jackson, TN (?)
JCTY: Johnson City, TN
MEMP: Memphis, TN
MBRO: Murfreesboro, TN (?)
MSHL: Muscle Shoals, AL
NASH: Nashville, TN
TPLO: Tupelo, MS (?)
WPNT: ?

Another interesting TVA thing: CSX Transportation serves the Widows Creek Steam Plant near Stevenson, AL with coal. Reading the employee timetable, I found an interesting note. At one of the crossings on the spur that runs down to the plant, there is a radio on a TVA frequency mounted on a pole inside a locked cabinet for the railroad crews to stop and contact plant personnel... the frequency might be 166.275 MHz, but I haven't ever been able to confirm this.

Make sure there are no utility lines within a 20-foot + radius of the antenna, in case the weather takes its toll.

If this is a new outdoor installation, occasionally check the radials to make sure they are still tightly in place. The radials can work themselves loose over time.

1296. Which scanner to get

Yahoo group: chattradio
Date: 2002-01-05 17:07:51 UTC
From: chevythang84
Topic: 1296 Message: 1296

I have used the the radioshack pro scanners before and I like them. I would like to purchase one of these scanners, and I was wondering what the difference is as far as reception. I only want to use the scanner to listen to trunked law enforcment. Would there be a difference on how well and clear signals come in on a pro-91 compared to a pro-94? What would be the advantage of going to a 94 besides more channels? Thanks for any help or suggestions.

1297. Re: Which scanner to get

Yahoo group: chattradio

From: j_multer
Topic: 1296 Message: 1297

My suggestion ... consider the Pro-93, if your interest is just trunked systems.

The Pro-91 is a discontinued model. You could only scan one trunked system / site at a time.

There is no advantage to "channels" on the Pro-94, if you are using it for trunked systems.

The Pro-93 can track multiple systems simultaneously, and can track via the control-channel-only mode. It has an alpha display, so you can program in meaningful names for the talkgroups, rather than having to remember I-D numbers.

Trunked reception of the 93 is much improved over the Pro-92. With software and the proper cable, you can upload / download the scanner's memory.

I believe the Pro-93 is currently on-sale at Radio Shack, through about Jan. 8th?

From: Matthew Sadler
Topic: 1298 Message: 1298

A reminder: the winter weather frequency list is now available online at http://www.qsl.net/kf4lhp/winterwx/index.html , in case you need to review it or print off a copy.

If you are a licensed amateur radio operator in the Chattanooga area, you can contact the TAG SKYWARN net on the W4AM 146.790 repeater (- offset, no tone) to report your weather conditions.

Also, if you learn of road closures or hazardous conditions on important area roads, you can post them here or email them to me directly and I will update a new page with that information: http://www.qsl.net/kf4lhp/winterwx/roads.html .

Subject: [ScanAtlanta] Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) ? Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader?s much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company?s commitment to keeping its customers at the forefront of scanning technology. ?Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise,? Carpenter said. ?With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency

range of 25MHz ? 1300MHz. The BC250D comprises all of the features of Uniden?s market-leading BC780 XLT in a handheld model, plus adds APCO 25

capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. ?We?re pleased to be bringing these great Bearcat APCO 25 units to market,? Carpenter said. ?We expect more big cities to migrate to the APCO 25 digital technology,

like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like ? and we know news organizations, businesses and consumers will want to monitor their signals.? Uniden officials stressed that APCO 25 digital scanning technology simply gives

users the ability to monitor the day-to-day activities and signals of standard city and government service departments ? but in no way allows

users to monitor encrypted signals from national and local security organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter?s annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and

distributors throughout North, Central and South America. # # #

1300. The NEW Uniden APCO-25 Trunktrackers

Yahoo group: chattradio
Date: 2002-01-06 12:11:15 UTC
From: Jonathan Guy
Topic: 1300 Message: 1300

Apparently an add on card the BCi25D will be required to utilize the APCO-25 feature. Not sure on a price for the add-on card.

The APCO-25 feature probably won't be a big help to any of us in the Metro-Chattanooga area, I believe Nashville is our closest system. An extra 600 memories will be a big help, lets just hope they add more Talkgroup memories...100 just aren't enough anymore!!

1303. Silly statements from Tampa...

Yahoo group: chattradio
Date: 2002-01-07 12:19:18 UTC
From: Jonathan Guy
Topic: 1303 Message: 1303

Good Morning America just interviewed "Witnesses" that were in the building when the small plane hit a high rise Saturday afternoon. The first 2 were an attorney, that works on the same floor, and her husband. They described the sound, noticed fuel spraying on their office windows from the plane, knew something was really wrong with a Coast Guard Helicopter hovering right outside, so they called 9-1-1.

Ya know, I'm thinking the big orange and white helicopter hovering outside would be a clue that the authorities already knew what had happened. That's as bad as driving by a wreck on the Interstate with fire trucks on the scene, and calling 9-1-1 because "The wreck looks really bad, you might want to send an ambulance."

I guess everybody needs their 15 minutes of fame...

1306. New Trunked System (another one)

Yahoo group: chattradio
Date: 2002-01-08 16:38:40 UTC
From: Matthew Sadler
Topic: 1306 Message: 1306

This new system is an MPT1327 system. MPT1327 is a very popular trunking protocol in the UK and Australia.

Unfortunately, there is no equipment available to follow or decode these systems (for free, anyhow). Apparently, the only user on it right now is the Tennessee-American Water Company - I would guess that they are abandoning the old GE MARC-V 800 MHz system.

This system is licensed to Tri-County Communications and the callsign is WPTS348. Licensed frequencies are:
451.8625
452.0125
461.4875
461.9625
463.5375
464.7875

It's located up on Lookout Mountain.

1307. Chattanooga Trip

Yahoo group: chattradio
Date: 2002-01-09 22:01:51 UTC
From: brianmr6
Topic: 1307 Message: 1307

Greetings folks.

I'm making a quick trip to Chattanooga from Spartanburg, SC later this weekend, and I'm looking for frequencies. I've found Matthew's site, which is very, very nice by the way - I love the tower pictures.

Anyway, I was wondering if anyone in the Chattanooga area owns a PRO-92, and has an .SPG file that they might be willing to share with me. Might save me some time sorting and creating the file myself. Looking for Chattanooga area, as well as Georgia Counties up I-75 from Hotlanta. Primarily interested in Public Safety listening, but beggers can't be choosers.

I also have a BC245CLT, in case someone has a file for that scanner, but I was planning to take the PRO-92.

Thanks in advance.

PS - In case there are some that don't have any idea what I'm talking about, .SPG files are those used with the Win92 program to program information into the PRO-92 scanner via a computer.

From: richard4537312
Topic: 1307 Message: 1308

Brian,

Santa left a Pro92 under my tree here in Cleveland (not REALLY a Chattanooga suburb.) Less than a week later, I left for the Citrus Bowl, and just didn't have time to program the new toy for the road. I haven't yet purchased the software to program the rascal, so I'm still using the keypad.

Once I crossed the state line into Georgia, I simply put the scanner into the search mode in the preprogrammed search ranges 0 and 1 (460-460.625, 153.725-156.000) I then put 154.68, GSP dispatch, into a memory location, set that location for priority channel, and turned on the priority function. In the Atlanta area, I changed the priority channel to 155.91. I don't think I missed anything of importance anywhere across the entire state. Of course, I ignored the several trunked systems in the Atlanta area.

This search approach to travel has never worked for my other scanners, such as Pro 91, Pro94, etc., because they always lock onto a frequency a step or two below the actual frequency of the conversation, resulting in little more than unintelligible noise. However, the Pro92 searches very rapidly, and consistently locks exactly on the correct frequency. Give this a try. I think you'll get good results.

By the way, you may have noticed that Matthew has provided information on an LTR trunked SMR operating in Dalton, GA. If you take a pit stop in the Dalton area, you might want to check this out. The Pro92 does track the LTR systems, which are pretty rare in this area.

Thanks Scott for posting the link to last year's Milcom Annual Airshow column in MT.

We just finished an even bigger and better Milcom column special on this year's airshow season which will appear in the March issue of Monitoring Times. It will include all new stuff, new frequencies, equipment and antennas, and our exclusive integrated Snowbird, Blue Angel, T-Bird show sked for 2002. It will not be posted to the website until the summer in order for people to purchase the issue or subscribe get some value for their loyality to the mag.

Oh BTW Scott. We need to make a sked and get on the air sometime to compare DX notes. I noticed on your profile at QRZ that you chase DXCC/IOTA etc. We have some things we can yack about. Maybe we will have an eyeball one of these days. ;-)

Gotta run all as I have one more column to finish for the March MT -- The Fed Files and the agency we profile in that column will be the Department of Agriculture's Animal and Plant Health Inspection Service, TVA, and the Cape Hatteras National Seashore.

Have fun out there and good hunting,

1312. ChattRadio on the air?

Yahoo group: chattradio
Date: 2002-01-17 03:36:26 UTC
From: Matthew Sadler
Topic: 1312 Message: 1312

The folks on ScanAtlanta (the Atlanta version of this list) have been batting this idea around for their area for some time, and I figured I'd throw the idea out to the Chattanooga folks and see if there is any interest in it.

They are working on getting set up on a community repeater on the UHF business band. Don't get me wrong, I am an advocate of amateur radio, but there are some things that are not legal to discuss on the amateur bands, and some of the list members aren't (or don't want to be) licensed hams.

Being on a commercial frequency gives them the opportunity to, in the future, work with the Atlanta area traffic reporters.

So, here's my question - how many people on the list would be interested in doing something like this? You would have to pay a small fee per month (the Atlanta gang is looking at $10/month), use a part 90 type accepted radio (NO modified ham radios), but other than that it would be pretty much OK.

I have not started looking in to what repeater would be available (but it should not be any problem), but if we get about 10 people or so (I know of three right off) who are interested, I will start doing some research and we can get the ball rolling.

Anyway, if you are interested, have comments, or questions, please post them on the list with the above subject line and we'll talk. I think this would be a good idea, hopefully some of ya'll will too.

Don't know if this ever made it out, so we'll try it again!

One other thing that comes to mind is that we can make a one-way "broadcast" about breaking news, including what channel to listen to and such. One-way transmissions are, for the most part, illegal on the ham bands.

1320. Icom R3 and Butch Johnson

Yahoo group: chattradio
Date: 2002-01-17 20:21:50 UTC
From: Richey Goldberg
Topic: 1320 Message: 1320

have been reading this list for a long time but never replied to anything on it. It has been a good source on scanning in this area. Anyways on to my question. I have been watching the video feed from Butch Johnson's helicopter and now that St3 has gone bankrupt there is no longer a video feed from the air. One thing I really liked about the feed was the ability to hear the in-cockpit communications among the crew. I have an ICom R3 and I have spent a little time searching for either the downlink from the Helicopter to the tower on the mountain or the one that would go from the mountain to their office. Has anyone found this? I am starting to miss watching that feed :)

It appears after trying "SOUTHLINK" Georgia State Patrol determined the system was not adequate for public safety use. BUT, they have been planning for an 800 system statewide, only to be held back by lack of funds. Word now has it the metro Atlanta area, Troop C, is getting an 800 system that will allow troopers to work with local agencies who have already migrated to 800. (Motorola Type2) How long it takes to build out statewide is another unanswered question.
So here is the 17 channel system, licensed under call sign WPPV743. Sites are located in Atlanta, College Park, Fayetteville, Marietta and atop Stone Mountain.

Unfortunately, that's all on 6 GHz. The FCC is starting to reallocate the 2 GHz band that had been used for links like that to "emerging technologies" (read - cell phones), and the broadcasters will get bumped up to 6 GHz. The same thing is happening with licensees using fixed point-to-point links on 2 GHz, they will be moved as well.

1325. Fwd: Georgia State Patrol New Radio System

Yahoo group: chattradio
Date: 2002-01-17 22:26:52 UTC
From: David Cannon
Topic: 1325 Message: 1325

About a year ago I saw a story in the Atlanta paper regarding this. I posted it then and am re-sending it. What the story wasn't clear on was if the new radio system was state wide or just for the five metro counties and around Perry, GA.

I did talk with a Trooper sometime back and he indicated one idea was to use Georgia Power's radio towers, which are numerous across the state.

1326. GSP 800 Freq Radios

Yahoo group: chattradio
Date: 2002-01-17 22:31:55 UTC
From: David Cannon
Topic: 1326 Message: 1326

Not sure if attachment came thru on forwarded message.

From the Atlanta Journal Constitution:

Tuesday, February 6, 2001

House budget writers seeking to improve highway safety in metro Atlanta and Middle Georgia provided Georgia State Patrol funding Monday for a new
radio system and computers in patrol cars.

The measure would complement Gov. Roy Barnes' goal of hiring an additional
75 troopers to patrol the five core metro counties of Clayton, Cobb, DeKalb, Fulton and Gwinnett.

The $20.2 million for the radio and computer system was approved by the House Appropriations Committee as part of an amended state budget. The full House is slated to vote Wednesday on the budget for the fiscal year
ending June 30. The spending plan then goes to the Senate.

State troopers cannot communicate by radio with some county police departments in metro Atlanta and near Perry, said Col. George Ellis, director of the Georgia State Patrol.

The county departments use frequencies beyond the range of the state's radio system, which Ellis said is about 30 years old. Troopers cannot communicate with each other in some areas because of blackouts, he said.

The computers would allow troopers to run background checks without waiting for a radio dispatcher to get the information. The computers also
could produce a traffic ticket, a feature that Rep. Larry Walker (D-Perry)
said would reduce problems in prosecuting some alleged offenders because
some handwritten tickets are illegible.

the 17 channel system is SEPARATE from the current 800 system used by Georgia State, Georgia Tech, building security etc. Altough I did notice one or two freqs are dupes from the current system for state buildings/universities, so it may be the "new system" will incorporate the "older" system????
the 17 channel system is also licensed for 2000 mobiles. And the use of sites around metro area is in keeping with geographic area of "troop c." of course from Chattanooga, not sure if 17 channel system is up and running, in testing phase or still being built. Folks in Atlanta can help. cheers!

From: John Creel
Topic: 1320 Message: 1329

Their microwave is transmit frequency is in the 6.5 Ghz band for both the helicopter and intercity link. I know of only one way to watch them without spending insane amounts of money ..... NewsChannel-9 at 5 and 5:30pm.

Richey Goldberg wrote:

> have been reading this list for a long time but never replied to anything on it. It has been a good source on scanning in this area. Anyways on to my question. I have been watching the video feed from Butch Johnson's helicopter and now that St3 has gone bankrupt there is no longer a video feed from the air. One thing I really liked about the feed was the ability to hear the in-cockpit communications among the crew. I have an ICom R3 and I have spent a little time searching for either the downlink from the Helicopter to the tower on the mountain or the one that would go from the mountain to their office. Has anyone found this? I am starting to miss watching that feed :)

>
>

Well, I assume that we are talking about using UHF for this..

I have a Motorola Radius P110 UHF HT. Six Channel, 4.5W output. Usable freq range is 438Mhz to 470Mhz. This is complete with Radio, Batt, antenna, speaker mike and charger. This unit is a 10 for looks and operation. This was used by me at work (ERPD) for a short time before we went to the Chattanooga Trunk System. I have pics if you would like to see them. Please email me off the list if interested. Asking price is $100.

Steaven, AF4ZJ

This shouldn't cost too much to get UHF repeater time. At CT Morgans it's 35 a month for 5 radios and I think 5 bucks extra a month for each radio over 5. Or at least it was last time I checked for me.

Just a thought.....

1333. Icom R3

Yahoo group: chattradio
Date: 2002-01-23 15:11:14 UTC
From: Mad Max
Topic: 1320 Message: 1333

Hey Guys,

I have recently purchased an Icom R3 myself and was hoping to use it to capture video. Other than actual TV channels - I have not been able to locate any video transmissions - but that could be operator error :(

Any suggestions as far as frequency / Operations go.

Thanks in advance,

Mad Max

You're not too likely to find much else in the way of video. You could try 902-928 MHz around a shopping mall or other area where there might be wireless security cameras, but most likely any security cameras would be wired, since the range of the 900 MHz cameras is not very good.

Microwave frequencies are line-of-sight. And most are fed using directional antennas. So you must be in there path to see them. If you go near any TV station transmitter during the newscast you might pick-up some 2Ghz video/audio being fed to a receiver on their tower, if they are going live. You might also try it if your in the area where you see "Live" vans with tall mast transmitting. These signals are very prone to bouncing or multi-path signals so the video may have ghost images in it.

Is something flaky with yahoo groups? I've also noticed I'm getting
only a few messages from some other yahoo groups I subscribe to.

Jim,

You can check the mail preferences in your Yahoogroups management
screen to be if any Yahoo messages are being bounced by your ISP.

Some missed messages will not show as bounces. I had a problem with
Yahoo and my AOL account, where some messages were not being
received. I also have a redundant subscription to all my lists on
RoadRunner, and those messages were all being received.

If a list is not a priority, it might be more-useful to receive the e-
mail as a digest. I have many of them set that way now, which
provides some additional protection from lost mail and viruses.

Yahoo is getting ready to merge Yahoogroups and Yahooclubs, so we
might see a "hiccup" in the e-mail when that takes place.

From: Matthew Sadler
Topic: 1338 Message: 1338

Well, I screwed up. You've probably noticed the two five-day old messages that showed up in your email. Here's the deal: the list is set to moderate new members. This is a spam preventative... but I never set the people who sent those messages to be regular, unmoderated members after they'd sent legitimate messages to the list, and consequently those messages were moderated. But... I never approved them (until just now) so they sat in confinement.

Sorry, folks. It won't happen again... :)

For what it's worth, we've been around since June 21, 1998 - and we've got a membership of 104.

1339. ChattRadio on the air

Yahoo group: chattradio
Date: 2002-01-25 06:34:18 UTC
From: Matthew Sadler
Topic: 1339 Message: 1339

OK, let's do this again...

For those of you who were interested in the ChattRadio commercial repeater project, please email me off the list at mws@... . I've done some research into getting commercial repeater service but I need to know how many are really interested (not sitting on the fence, but holding your hand up). Repeater service can be had for the sum of $7/month/person but there will be a small start-up cost involved - ergo, the more people we get signed up on the front end, the smaller this cost is for each individual who is interested. I am told that the repeater we would get stuck on would be exclusively ours for the time being (the possibility of another user being placed on it exists, but isn't real likely). This is very good, FWIW.

As soon as I get this figure, we ought to have a real, in person meeting somewhere. We ought to do this anyway with the "general population." The folks in Atlanta (they have all the good ideas, don't they?) do this already - they call it a ScanIn, and the members of the list meet at a restaurant to compare notes, meet those they knew only from email, and have a good meal.

Anyway, if you are really interested, please email me directly, and in a week or so we'll try to pick a location and a time (Saturday mornings are appealing to me) when a meeting would be convenient.

I'm in a catch-22 situation with yahoo groups because I originally had a onelist account which then got converted to an egroups account which then didn't quite get properly converted to a yahoo groups account. I tried to log in and follow the instructions to convert it but it told me it didn't recognize my user name, but then when I tried to sign up using that name it said I already had an account! So... I get the email messages but I can't get in to change any preferences. Anyway, I seem to be getting the messages now, and apparently there has been a decrease in volume on the other groups I subscribe to (related to the uniden BC780) because the moderators have booted some people off for endlessly chattering about off-topic subjects. As far as I know, I only missed the one message from Matthew - the original one about the possible chattradio repeater.

ChattRadio folks:

Greeting from ScanAtlanta. Matthew looks like he is setting ya'll up right. A word on the ScanIn's. We don't just meet at a restaurant and compare notes and radio's, but I usually arrange a tour of a 911 or other communications type center. We have been to Gwinnett Co 911, Cobb Co 911, Smyrna 911 (and fire house), East Point 911 & Firehouse (had breakfast with the ff's) and even went to the tower at DeKalb Peachtree (PDK) airport. So, if anyone has contacts with a 911 Center or other radio entity, let Matt know so he can schedule you a date for the ChatScanIn! If he makes it on a good Saturday, I'll even come up for it! For some pictures, you can go to http://www.scanatlanta.com/scanins.htm and click on the links.

And as always, ScanAtlanta ScanIn's are open to everyone who want's to come. I'm planning one for late February with the possibility of a tour of a local TV network station.

1344. I need something.....

Yahoo group: chattradio
Date: 2002-01-26 18:17:29 UTC
From: brianzz423
Topic: 1344 Message: 1344

I need a public safety speaker/mic (the one with the antenna on it) for my Motorola MT 1000. The one I have now has about had it after years of abuse. I checked at Doc's and they have them for 275 bucks but I think that's a bit steep. Anyone know of anyplace else that sells them, mail order/internet or anything?

Thanks.

Not really, for the same reason I've never really considered using web-based message boards - I personally prefer having messages delivered straight to my in-box. NNTP also would make it harder to have a lengthy archive like we have with Yahoo Groups on the web, and it involves setup on the part of the individual users.

If you're not looking for something new, I'd check on eBay, Batlabs (http://batboard.batlabs.com/), or in the rec.radio.swap newsgroup. I did a quick check on eBay and found two used in very good condition public safety speaker mics for $49 each.

You could call up C&E on Latta Street and see what they get for them new, but I kinda doubt their price would be much better.

1347. PRO-93 on sale

Yahoo group: chattradio
Date: 2002-01-27 12:34:53 UTC
From: Jonathan Guy
Topic: 1347 Message: 1347

The Radio Shack PRO-93 (Cat 20-523) is on sale in stores through Feb. 3rd, 2002. The PRO-93 is a hand-held, 300 memory trunk tracker, alpha tagging, computer programmable (not controllable), triple conversion and a dynamite deal for $169.95. The PRO-93 tracks Motorola Type I, Type II, Hybrid and GE/Ericsson trunked radio systems and will scan trunked and conventional systems simultaneously. Sensitivity seems to be good, what I'd expect from a quality G.R.E. triple conversion scanner.

Frequency Coverage: 25-54; 108-174; 216.0025-225; 406-512; 806-823.9875; 849-868.9875; 894-960; 1240-1300.

The PRO=93 takes 4 'AA' batteries, and comes with a battery pack that accepts rechargeable 'AA' batteries.

My only real gripe is that G.R.E./RadioShack didn't build the Talkgroup I.D. portion of the firmware to allow the user to step through the talkgroups like all the Uniden models. Still, for the price, I'll let my PRO-93 scan for new incidents and use a Uniden to manually select that one talkgroup.

I've read where the mobile version, the PRO-2053, may also be on sale for $179.95, but I've not seen that in a store.

1348. 'AA' Batteries

Yahoo group: chattradio
Date: 2002-01-27 12:41:43 UTC
From: Jonathan Guy
Topic: 1348 Message: 1348

I found a pack of Panasonic @Home Super Heavy Duty batteries at the Golden Gallon the other night for only 99 cents. I bought the pack and have been pleased with the service they've given. I went back last night and bought the last 3 packs on the shelf. 99 cents for 4 is the cheapest price for decent 'AA' batteries I've seen in a long time.

Next time you see a Golden Gallon, stop and check if you need batteries!

You might also want to try the boneyard / used equipment tables at the Dalton Hamfest since its coming up on Saturday, 23 February 2002. It's usually held at the N.W. Georgia fairgrounds.

1350. Military Activity in LaFayette?

Yahoo group: chattradio
Date: 2002-01-28 03:49:47 UTC
From: go4tcross@cs.com
Topic: 1350 Message: 1350

I was sitting at home Saturday afternoon. I can't recall the exact time, but it was between 2 and 4 pm. A helicopter flew so low over our neighborhood that the house shook. I caught a quick glimpse of it as it went behind some trees. It was dark green with no visible markings that I caught. It sounded like it landed at Barwick Airport. (I live about 400 yards away) I could hear it for a while, then it took off to the south, towards Summerville.

Did anyone hear any air traffic related to this? I didn't get to my scanner to program it in time.

1352. City Auctioning UHF Maxtracs and MT1000s

Yahoo group: chattradio
Date: 2002-01-31 19:37:15 UTC
From: mws6533
Topic: 1352 Message: 1352

The City of Chattanooga will be holding an auction this Saturday (February 2) at 9 AM at the old
Air Pollution Control Bureau offices at 3511 Rossville Boulevard. Included in this auction are two
MT1000 portables and several Maxtrac mobiles that were all working when removed from
service. These radios are all UHF and will work for the planned ChattRadio commercial repeater.

The City is also planning to auction lots of radios in the future on the internet, I will post more
information when that occurs.

I am currently working on a time and place where we, as the whole ChattRadio group, can have
a meeting. If you have any preferences for times or places, let me know. I'd like to have this
meeting sometime in the first two weeks in February.

From: Michael Martin
Topic: 1357 Message: 1357

It's here! ScanIn7!

Through hard negotiations and the greasing of several palms, ScanAtlanta will be having ScanIn7 (SI7) on SATURDAY FEBRUARY 23rd at 10:00 AM at WGCL TV-46!

Richard Marlar has graciously worked out the details for us to take the $5.98 grand tour of the station. I've been there, and believe you me, there is lots of goodies there to see!

MARK YOUR CALENDARS! SATURDAY, FEBRUARY 23rd AT 1000 AM at WGCL TV-46.

The address is 425 14th St., N.W., at the corner of 14th Street and Mecaslin, across from the mosque.

We will either have lunch next door at Bob and Junes, the Varsity or Silver Skillet!

I'll post a map for those who need it on the ScanAtlanta Website in the next day or two.

1367. 2002 Cherokee Trails Rally - Coming Soon!

Yahoo group: chattradio
Date: 2002-02-08 01:37:05 UTC
From: Matthew Sadler
Topic: 1367 Message: 1367

The 2002 Cherokee Trails International Rally is quickly approaching - March 16th (a Saturday), the cars will race over eight stages and about 120 stage miles within the Cherokee National Forest around the Ocoee River.

Once again, we will be calling on the ham radio community to assist with communications. This is serious racing, with competitors reaching speeds around 130 MPH on one-lane gravel and dirt roads. With these speeds and road conditions, effective and reliable communications are critical to ensuring the safety of the drivers and co-drivers (for those unfamiliar, each car has a driver and a co-driver, who has a route book and pace notes so that the driver knows what lies ahead of them on the road).

We need hams to work at the starts, finishes, and midpoints of the courses. We also need hams to work at spectator locations, in the service area, and to ride along with different official vehicles. A few hams who have experience at handling lots of traffic will also be needed to work in net control.

If you are interested in volunteering, you can sign up at:
http://www.rivergate5speed.com/rally/ct02_home.html
Just scroll down and click on "Rally Staff" to sign up.

If you'd like more information, please feel free to email me directly and I will try to answer any questions.

1373. Patches!

Yahoo group: chattradio
Date: 2002-02-12 04:38:42 UTC
From: mws6533
Topic: 1373 Message: 1373

Many of you have no doubt seen all of the different patch pictures on the scanchattanooga.com website, representing the different agencies you can listen to. I figured it'd be interesting to throw together a page with every single patch image on the site, so I did.

http://www.scanchattanooga.com/patches.html

Be forewarned - there are 327 images on this page. Some of these are not being currently displayed on any other page, but may be in the future.

Submissions of patch images not shown but for the area are always welcome, just like frequency updates.

Also, pages are now available on the site for Roane County, TN, as well as Bartow and Gordon counties in Georgia. Look for more regional coverage in the coming months (counties that may be listed include Dekalb County in Alabama, Chattooga and Floyd counties in Georgia, and Franklin and Coffee counties in Tennessee).

1378. Polk Co. Plane Crash

Yahoo group: chattradio
Date: 2002-02-13 02:06:59 UTC
From: kf4gnl
Topic: 1378 Message: 1378

The pilot was the only one aboard, survived and was airlifted to Erlanger Medical Center via LifeForce helicopter, where he is in critical condition. The plane was reportedly a twin-engine Turbo Commander from Lovell Field in Chattanooga. The plane came to rest in a pine tree about 20 feet off the ground in a remote section of the Cherokee National Forest.

Here are some links to the story on some of the Chattanooga TV station's web sites. Our thoughts and prayers are with the pilot tonight.

1380. Soddy Daisy Police, and the Trade Center

Yahoo group: chattradio
Date: 2002-02-13 07:26:01 UTC
From: mws6533
Topic: 1380 Message: 1380

Two notes:

- Soddy Daisy Police has been granted an STA (special temporary authority) to operate a conventional repeater on 854.9625 MHz. If you're in that part of town, you might want to program it in, as activity on that frequency ought to start sometime soon. I've also been occasionally hearing traffic on their old 460.250 MHz repeater, so apparently it's not dead and gone yet. This would bring to three the number of police departments in Hamilton County who have alternatives to the trunked system (Signal Mountain has their 800 MHz conventional repeater which reportedly was there before the trunk went on the air, and Collegedale still has their repeater in the GMRS band).

- The Carter Street Corporation, which operates the Convention & Trade Center downtown, has applied for some repeaters. Their application lists 464.350 and 464.400 as two of the repeater frequencies, the third is 451.225 MHz. I'm curious as to what their coordinator was thinking, what database they were looking at, and so forth, as that frequency is licensed to (and used pretty heavily) by the Electric Power Board, who has repeaters on that frequency on both Raccoon and Mowbray mountains. Time will tell...

Sounds like it may be a in-building cellular repeater/extender. It takes low power cell phone signals and amplifies and retransmits it outside to the tower.

The frequency range isn't right for a cellphone extender. Maybe it has
something to do with a commercial trunked system. Where is it located?

There should be a second string of numbers, which will help I-D this particular Ericsson equipment. With the additional numbers, go to the F.C.C. search site at:

http://www.fcc.gov/oet/fccid/

The "AXA" will be the grantee code, and the rest of the number will be the product I-D. You can do a search using only the number you have, but you'll end up with 289 matches. Ericsson apparently made these units in many flavors.

Celwave is an antenna equipment manufacturer.

While it is reliable information, I haven't heard much out of them. I would suspect that the majority of the comms are VHF simplex between handhelds. I know Nextel has good coverage down there, so I'd also suspect that the rest of the cellular and PCS carriers do and that there is a lot of traffic on those bands relating to the incident.

I was, for a brief period of time this last year, employed as a detention officer with the Walker County Sheriff's Office and prior to that was an Explorer with them for 5 years. During the majority of the time there was a "Detective Channel" that they always tried to keep hush hush but that I was told, by a detective, would sometimes receive the Taco Bell in LaFayette. However, during this last year Nextel has contracted with the Sheriff's Office to provide radio/phone combinations for members of the Detective Division, and others both in the department and Walker County Government, as well as provide "discounted" service to other members of the department. At the time I was there most members of the Detention Division also had these radio/phone combos although they payed for these themselves and used UHF Radios for the formal communications in the Jail. It is my guess that most "sensitive" communications between members of the Walker County Government, concerning the Noble Incident, at least are taking place on these Nextel systems.

From: Matthew Sadler
Topic: 1397 Message: 1397

Looking at my server logs, traffic has certainly picked up in the midst of the mess down in Noble... which is good, I guess. I try to keep the most current, verified, and accurate information on the site at http://www.scanchattanooga.com/ about where you can listen in to, well, most anyone.

If you do have specific information to contribute, please feel free to send that information to me at mws@... . I will hold contributor's identities confidential - in fact, after I jot down whatever is sent to me, I delete your message... I'd rather not know who you are!

More information is coming soon - a page full of Chattooga County information, and sometime soon we'll expand the coverage across the Cumberland Plateau to Coffee and Franklin counties in Tennessee. Expanded NE Alabama coverage is also in the works.

Has anyone ever thought about setting up a web controled radio? So far I have the ISP and antenna part solved (I work for a local ISP with antenna locations :) and I need to find out which is better for this. The Icom or the WinRadio. There is a web interface available for both, but the icom solution only runs linux. The only draw back for the icom is that I am still a newbie at Linux, but then again this might be another excuse to learn Linux. Any Ideas thoughts on this idea?

You might also try running an "Optoelectronics" radio using PC software, BUT, (isn't there always one) how legal this would be? Wouldn't this be considered "rebroadcast"? I think that's illegal under the Communications Act of l934 with supplemental amendments.

I think the only real "grey area" would be with commercial broadcasts. I think there are ways with both the Icom and WinRadios to "lock out" frequencys. There are quite a few of these radios on the web, in and out of the US. I am going to email some of the US radio admins and ask them about this. I already have a private broadcast from a Bearcat 895, so that I just have one radio but I can listen to it from home or work. I would hate to waste such a cool thing.

1406. Microwave Paths and Such

Yahoo group: chattradio
Date: 2002-03-02 03:26:31 UTC
From: Matthew Sadler
Topic: 1406 Message: 1406

The Atlanta scanner folks arranged a tour of WGCL-TV's studios last weekend, so I went. Nice facility - they built it in (I think) 2000 and haven't been there very long. One thing I noticed in their engineering shop was a map showing the microwave paths for the four network stations (NBC, ABC, CBS and FOX) all around Atlanta. Most of the stations have multiple ENG microwave receive sites (these are the frequencies that the live trucks use to send video back to the station), and thus there are a lot of different microwave paths in use on a number of bands.

I've never seen anything like this for Chattanooga, so I sat down with some FCC records, a little software utility, and Adobe Photoshop, and made one myself. It shows the paths licensed by WTVC, WRCB, WDEF, WDSI, and WTCI, as well as Butch Johnson's Eye in the Sky Traffic.

The address is:
http://www.scanchattanooga.com/broadcast/tv-microwave.jpg

Disclaimer (isn't there always one?): just because it's licensed doesn't mean it's in use, and just because it's in use doesn't mean it's licensed.

Gripes, suggestions, pointers; feel free to send 'em my way.

And remember - this is just those stations - I've not even put in the stuff used by the governments, railroads, utilities, cell phone companies, and so on.

1409. Walker County - Noble Operation Frequencies

Yahoo group: chattradio
Date: 2002-03-06 17:25:30 UTC
From: Matthew Sadler
Topic: 1409 Message: 1409

Now this is most interesting... the state of Georgia has received a STA to operate a 5 channel trunked radio system near Noble. Frequencies authorized are:

866.2125
867.0375
867.6000
868.0375
868.2875

Folks down that way would certainly do well to program this into their radios and see when it comes on the air - if it isn't already! Don't know if this is a digital or analog system.

Yahoo group: chattradio
Date: 2002-03-17 19:30:37 UTC
From: Matthew Sadler
Topic: 1414 Message: 1414

Brent McDonald has been generous enough to give me some aerial photos of a few towers around Chattanooga, which I'll be scanning and posting on the ScanChattanooga site. I've only gotten two done so far, but they're pretty cool.

The first is the AT&T microwave radio relay tower on Signal Mountain (see http://www.scanchattanooga.com/aerial/att-signalmtn.jpg).

The other is my employer's transmitter site - WTVC-TV, also on Signal Mountain (see http://www.scanchattanooga.com/aerial/wtvc-tv.jpg). You can see the shorter tower for the Doppler radar off to the left. To get your bearings, this photo was apparently taken from the northwest, as WRCB-TV would be off to the right in the distance, and WDOD-FM and WSKZ-FM would be off to the left.

I have several others that I'll be scanning and posting to the website.

1415. The Bend

Yahoo group: chattradio
Date: 2002-03-18 04:21:59 UTC
From: richard4537312
Topic: 1415 Message: 1415

Does anyone know the frequencies for the radios used by the folks (employees, not residents) at Mocassin Bend Mental Health Institute? I know their paging frequency, so I got the coordinates from the FCC database, and did a search for other transmitters licensed to the State of Tennessee at the same location. Got zilch. Any chance they're using a trunked SMR?

1416. Re: [chattradio] The Bend

Yahoo group: chattradio
Date: 2002-03-18 04:29:19 UTC
From: Matthew Sadler
Topic: 1415 Message: 1416

I have (only a few times) heard some two-way traffic on the 158.805 MHz frequency. If they are using any other frequencies, I would imagine that they are on VHF-HI for radio compatibility reasons.

That said, I'm not aware of any others.

1417. ChattRadio On The Air - Question

Yahoo group: chattradio
Date: 2002-03-18 08:22:57 UTC
From: Matthew Sadler
Topic: 1417 Message: 1417

OK, after doing some research, here are the two options I'm weighing right now - both will offer comparable coverage, equipment pricing, and monthly rates ($10/month or less):

- conventional UHF repeater
- 800 MHz trunking

Personally, I'm a fan of the 800 MHz trunking because the in-car coverage on a portable is about the same as using a 15 W mobile. On a HT, you should be able to go most anywhere around Hamilton county, and northern Walker and Catoosa counties and use your portable inside the car. You can't do this with UHF.

Like I said, equipment costs are about comparable. I regularly see Motorola MTX portables on eBay selling for less than $150; most UHF radios sell for similar prices.

Your thoughts? Comments? Questions?

(Ashland City-AP) -- Eleven barges crashed into the Cheatham (CHEE'-tuhm) Dam today after they came loose from the tugboat towing them along the Cumberland River.
A spokesman for the Tennessee Emergency Management Agency says three barges capsized. No one was injured.
It wasn't known how damaged the dam was.
The Cumberland River was just four feet below flood stage in Nashville because of heavy rain since Saturday. Cheatham County is just west of Nashville.

From: Matthew Sadler
Topic: 1420 Message: 1420

http://www.chattanoogan.com/articles/article_19548.asp

Apparently, there will be an airtanker base built soon at Lovell Field - which will certainly be welcome news to the various firefighting agencies with the rash of forest fires over the past year or so.

I believe this will be built by the US Forest Service, which means we may see some new fed frequencies come into use for on-site communications.

Topic: 1426 Message: 1426

Terminix uses talkgroup 306-1 on the Chattanooga SMR trunked system. I verified this today when I heard them called out to a nearby address and drove by in time to see the truck pull up.
BFI uses talkgroups 500-1, 500-2 and 500-3 on the 5 channel trunked system (856.8375, 857.8375, 858.8625, 859.7875, 860.8875). 500-2 is the most active group, especially early in the morning. I have heard them mention numerous locations where they were emptying dumpsters, and there are BFI dumpsters at these locations.

Do you mean 42.42 or something else? I can get this channel with an outdoor antenna, but you only hear one side of the conversation. There is minimal activity on this channel, so I assume there must be another frequency with more activity.

From the roof of my home in the Charleston area, I have a line of sight view of those mountaintop towers in the Benton, TN area, one of which I am sure is used by THP. Since I moved here, I've gotten outstanding reception of THP on 42.42 mHz. I'm using the same antennas that you mentioned.

I've noticed that local agency dispatchers, such as Bradley County SO, now communicate directly with the THP units to inform them of wrecks or other highway incidents within their jurisdictions. When the local agency does this, they use their own local frequency, such as 155.535 In Bradley County. This could account for reduced communications between the THP units and their Tiftonia dispatcher. Notice the "collection" of antennas now mounted on most THP units. Hint: When listening to your local police, listen for unit numbers in the 2200's.

The absolute best source of information on THP frequencies is http://www.qsl.net/kf4lhp/state/tn.html

From: tosborne37914
Topic: 1428 Message: 1432

Hamilton County and most of SE Tennessee is in THP District #2, hence the unit #'s of 2200. There are some tactical units in Ford SUV's with #'s of 99xx. The normal dispatching in your district is on low band in what is calleed "two frequency simplex." Mobile-to-base on 42.26, base out on 42.42. These are not repeater channels in the conventional sense, so you must monitor both to hear both sides of a conversation. Mobiles on 42.26 will be heard only if they are very near you.

THP also maintains a VHF high band system which is repeaterised. Output may be 159.090, 158.730, or 155.430 depending on site. ASSIGNED units have a "county" radio installed. This is either VHF or UHF, or 800 depending on the local system to be communicated with. In THP District #2, which is SE Tenn., most local agencies except Chattanooga are VHF. In District #1 (Knoxville), where I am, most locals except Knox County are UHF. "Pool" vehicles (those used as spares, when an assigned unit is unavailable, may not have a "county" radio.

You might be interested in the local situation, as Chattanooga may be similar. The Knox County Emergency Communications District was created several years ago by act of the legislature to provide dispatching communications to public agencies in the county which wanted to get on board with a new 800 mhz trunked radio system. As a special district, the KCECD has authority to levy taxes which at the present consist of a monthly charge on every telephone line, business or residential, in the county. The charge is collected by the wireline telephone company (there are 4 in the county) and remitted to the district. The KCECD buys the radio equipment and leases it to the using agency for a monthly charge, which used to be $25 but which, I believe, has gone up. Knox County Sheriff and KPD are the biggest users, but housing authority, transit system, and THP, like all other govt agencies, may lease mobiles or portables if they agree to pay the monthly rent. Non-government users which have a public interest, such as newspapers, may lease units which are programmed for "receive-only." There were coverage problems with the 800 mhz system when it first went into operation, but, I believe, they have been addressed. I don't think any but a few THP units which regularly operate in Knox County are so equipped.

Because of the addressing and ANI features of the 9-1-1 system, I am sure repsonse times are better. However, this technoology is very expensive and usually requires more sites for the same coverage as a conventional VHF or UHF system. I don't monitor these systems because I don't yet have a trunk tracking scanner.

Keep your ears up down there and share with us any good stuff you learn.

1441. RE: [chattradio] 800 mhz

Yahoo group: chattradio
Date: 2002-05-11 19:40:40 UTC
From: Jonathan Guy
Topic: 1440 Message: 1441

Do you have a dual band amateur HT? Can you give us the model number? If that's what you're asking about...

Since you say it can be modified to receive 800 it can only receive conventional, not trunked frequencies. You can program the frequencies assigned to the trunked system, but as you listen to a frequency you'll hear Police, Fire, EMS, CARTA, Public Works, or whichever talkgroup the Trunked Computer assigned to that frequency.

So, the answer is no, there will be too much "other" traffic from other talkgroups to listen just to public works.

You Might Belong to a Redneck Volunteer fire department if ....

If your department has ever had two emergency vehicles pulled over for drag racing while going to a scene.
If you have those chrome, naked lady mud-flaps on your pumper.
If your firehouse has wheels.
If you've ever got back and found you've locked yourself out of the firehouse.
If fire training consists of everyone standing around a fire get'n drunk.
If you've ever let a person's house burn down because they wouldn't let you hunt deer on their land.
If your personal vehicle has more lights on it than your house has lights in it
If you've ever walked through a Christmas display and walked away with at least 3 new ideas for a light scheme for your truck.
If your rescue unit can smoke the tires.
If your department name is mispelled on your equipment, in stick-on lettering.
If the nurses and doctors turn out the lights and hide when you show up at the hospital to get your equipment.
If fire dispatch can't mention your name without laughing.
If the local news crew won't put your department on t.v. because you embarassed them last time.
If you've ever locked the keys in your trucks.
If you've ever reffered to a light bar as "really sexy."
If your defib consists of a marine battery, a pair of jumper cables, and a fish finder.
If you've ever taken a girl out on a date in a pumper.
If your pumper has been on fire more times than it's been to a fire.
If your pumper smokes more than the house fire you're at.
If you've ever been arrested for indecent exsposure at a house fire.
If you've ever called it quits on a house fire when the beer got hot.
If you've ever been late to a house fire because you had to stop and get the guy who fell off the truck.
If you've ever stopped enroute to pick up a good road kill.
If you hand out spit cans before each company meeting.
If you have a sign out front of your station that says, "WILL FIGHT FIRES FOR BEER."
If your fire equipment has chew stains down the sides of 'em.
If everyone on your department is related in some way or another.
If your last four fire department raffles were for a shotgun...and a member won it each time.
If you borrowed the department's quick dump tank so you could have a neighborhood pool party.
If your Hurst tool is on loan to the local body shop.

If your safety officer is the person who broke his arm at the last house fire.
If you use a hanging noose knot for all your rescue operations because it's real adjustable.
If you don't allow a person to join the department unless they own a pickup.
If your roster has a high percentage of members named BUBBA.
If your dispatcher is the guy with the biggest & loudest CB.

From what I've seen on the 'net, expected MSRP on the BC-785D base and the BC-250D handheld is expected to be $499.99 each. Street price down around $359.99. The APCO-25 decoder card is expected to be around $309.99 street price. These are just "guesstimates".

I can deal with the 100 channels per bank (althought 50 channels in 20 banks would be GREAT). I'm really hoping for the 100 talkgroups per bank to at least double.

You are correct about TWRA being digital, but I've heard some clear traffic the last few months. TVA Police are also digital, but I don't know if its encrypted. The closest APCO-25 system to Chattanooga would be Nashville, TN.

Jonathan

The ht is a dual band 2 meter/440 Kenwood TH-78A. I have some printed instructions that look at though they are from Kenwood showing how to perform the modifications to receive on the 800 mhz freq.

Sounds like the audio would be too hard to keep up with if the modification were done.

I thought that the Public Works frequencies might not be on the trunked system and was wondering if this radio could be used on this frequency alone. I guess not after reading below.

Thanks.

ok guys i have been a scanner and shortwave hobbyist for years, but its time to take a progressive step forward. im taking the tech nocode test saturday, i have studied and taken a few practice test, not doing bad on the practice test, I hope the real test are similiar to the practice test. i have read solidly the Now Your Talking and I think I am prepared except for a few questions that seem to trick my memory. I have tried to re examine my wrong answers on the practice test, and learn from my mistakes. if i pass saturday i am going to be on the market for i guess a basic hand held radio. I was wondering if anyone has a recommendation for a newbie like myself. I guess I will try a hand held before i get the fever for a major upgrade, (this hobby is addicting, my wife tells me).

the funny part about this is i am an addiction counselor (scary)

I've had good luck with my Yaesu VX-5R. Its small, covers 3 bands, doubles as a fairly good scanner, and has the new lithium ion battery that lasts much longer than ni-cad or nickel-metal hydride types. The big three, ICOM, Kenwood, and Yaesu are all making good HTs. Its just a matter of personal preferece, the features that you want/need, and $$$.

Good luck with your Technician exam, hope we'll be hearing you on the air soon.

From: Matthew Sadler
Topic: 1456 Message: 1456

Another analog trunking system has gone off the air... sorta.

This is Nextel's Chattanooga system... they'd been making threats that they would be shutting this system down for some time, but every time the day came, it'd still be working, and kept working. Last date I was told would be May 15th... and sure enough, it worked fine on May 15th in the afternoon, but the next morning I tried to key up my MTX8000 and only got a busy tone. The data channel is still there, but the system is apparently giving busies to any radio that tries to transmit. I guess it'll be actually taken down sometime soon.

I would assume these users are now scattered among the remaining analog systems, or some may have gone back to UHF community repeaters, or run off to cellular or (gasp!) Nextel's digital service.

http://www.scanchattanooga.com/trunking/nextel-chattanooga.html

RIP, old analog friend...

Richey,
Which freqs. have they been using mainly? The last show I watched, they basically used 2 or 3 freqs., one main freq. for command and one for when one or 2 planes would split off from the main group. All of the other freqs. went unused. Is this the case this year?

Thanks,
jim

It's been my experience that most of the comms are on other freqs, Lovell freqs are usually air traffic control freqs only. In the past, the public address system was rebroadcast on an fm frequency- my memory fails me at the moment, but search 140-145, and 149-160 mhz. The may possibly be up around 450-470, too.

Here's what I've noted thus far...

413.100 simplex, in FM mode - appears to be the Thunderbirds maintenance crew
143.850 simplex, in AM mode - used yesterday by T-birds
141.850 simplex, in AM mode - used today intermittently for testing
235.250 simplex, in AM mode - don't know who, but in use

143.850 is definitely the main freq the Thunderbirds use for the show. There was a lot of humorous chatter during pre-flight- great monitoring! I was unable to find the freq. the #5&6 breakaway planes were using during the show. I also heard the brief comms on the other 2 freqs. you mentioned.

From: sdtnvol42
Topic: 1462 Message: 1462

hey gang, i did it, i passed my tech no code ham this past saturday.

i am considering the new yeasu vx7r, handheld to start off with, it is a triple band, with 5 watts.

will this be enough to work simplex and repeater nets, in the chattanooga area?

i only have a basic radio shack discone and the rubber duck, telescoping antennas.

i dont want to go overboard being a newbie to ham.

1463. vr 500 wide band communication receiver for sale

Topic: 1462 Message: 1464

Congrats!

5 watts is usually enough to work the local repeaters. I would recommend getting an outside antenna for the car tho, at least a dual band 2m/440. Larsen or Comet are good choices. A good outside gain antenna will also help your simplex communications. Mobile with the supplied rubber duck will probably get you a mile or two, a good moblie external gain antenna could boost that to 5 miles or better considering terrain. Remember, all the metal around you when sitting in a car isn't a good thing for radio waves.

Trust me, what seems like "overboard" now...won't be enough in a couple of months. This is an addictive hobby.

Welcome Aboard

1465. Marine VHF Radio Frequencies

Yahoo group: chattradio
Date: 2002-05-21 23:47:41 UTC
From: kf4gnl
Topic: 1465 Message: 1465

With the upcoming holidays this summer and the increased traffic on area lakes and rivers, here are a few VHF Marine Radio frequencies that you might want to put into your scanner.

156.300 Channel 6 Intership Safety
156.800 Channel 16 International Distress, Safety, and Calling
156.850 Channel 17 State Agency (TWRA boats monitor this channel)
157.100 Channel 22A U. S. Coast Guard Liaison and Maritime Safety Information

The Coast Guard maintains a listening watch on Channel 16 through a system of linked repeaters. The coverage map of the repeater on Signal Mountain can be found at the following URL (scroll down to Tennessee River Chattanooga to Knoxville):

http://www.navcen.uscg.gov/marcomms/cgcomms/nds.htm

Here are a few links to other marine band information:

USCGC Ouachita (WLR-65501), based here in Chattanooga
http://www.uscg.mil/d8/groupohiovalley/cutters/CGC_Ouachita.htm

USCG Group Ohio Valley

Jonathan,
These folks are pretty defensive about this.
A few weeks ago, an aquaintance of mine was eating Sunday lunch at
the East Ridge retaurant. Having his Pro92 handy, he quickly
ascertained the channel number and CTCS codes. Likewise having a FRS
radio handy, certain references to water running from under the Men's
restroom door and the immediate need for a mop were made.
Management was unamused, and cerain references were made to
an "unauthorized user" of the channel.

Topic: 1470 Message: 1471

The 2053 is the desktop version of the PRO-93. I have a PRO-93 and I really like the scanner. The ONLY thing I really dislike is the way GRE (the manufacturer) designed the talkgroups. The PRO-93/2053 - 92/2067 won't allow you to manually step through the talkgroups you have programmed. I prefer Uniden's method...but you just can't beat the text tags!

For the price of $179.99 its a great deal, can't be beaten.

1476. Trunked Systems Question

Yahoo group: chattradio
Date: 2002-05-25 03:58:14 UTC
From: LFDGAJR@aol.com
Topic: 1476 Message: 1476

I have been the owner of a Radio Shack Pro-90 Trunk Tracker since shortly after they were first released, however, I have never been able to pick up the Chattanooga-Hamilton County system from my house. This is something I attributed to my location, just outside of La Fayette GA in the Naomi Community. This assumption was backed up by the fact that I could receive the system until just before I pulled onto the road I live on; however, the other day I was stunned to discover that a friend of mine whom I used to volunteer with at the fire station was able to succesfully and clearly pick up the Chattanooga-Hamilton system on a TrunkerTracker II scanner at my house and other locations that I also had no luck with. Today I decided to see if the system was maybe now receiveable on my scanner here at the house, again with no luck. I'm going to erase the bank and try reprogramming the frequencies back in again to see if maybe that is the problem, but I don't much believe it is since the last time I had it with me in Chattanooga in worked fine just a little scratchy at times. Any idea as to why one scanner and not the other one would pick up the frequencies here? Also I have noticed what appears to be a increased static on local frequencies but not sure if this is related. In addition the SMRs that I used to be able to receive just fine here at the house are now "no shows" when comes to acquiring the data channel or anything else for that matter.

Thanks for any help you can provide,
Christian KF4ZMB

1477. RE: [chattradio] Trunked Systems Question

Yahoo group: chattradio
Date: 2002-05-25 07:49:04 UTC
From: Jonathan Guy
Topic: 1476 Message: 1477

Let me offer a couple of suggestions...

Try programming each of the 4 control channels in conventional mode.

857.2125, 858.2125, 859.2125. 860.2125 (from the http://www.scanchattanooga.com website) are used as rotating control channels. See if you have solid reception of the control channel. Try it with different antennas.

The Pro-90 is the same as the BC-235, just a little different case and originally built around October of '97. Its a good radio, but 5 years old, you may have a loose antenna connection since you're having trouble with other systems that used to be receivable. Your friends BC245 is a 2nd generation TT and there really is a difference in receive quality. My own experience has shown a 245 is a much better trunk-tracker than the 90/235, the second generation came out almost 2 full years after the 235...they'd learned a little more about trunk-tracking scanners.

As far as the system being a little scratchy inside the city limits of Chattanooga, welcome to 800Mhz. The antenna is once again your culprit, it is cut as a wide band receive antenna to match the scanner's specs. Try an outside antenna such as the Iron Horse tri-band antenna, the Iron Horse is about 9" tall and comes with a mag mount base roughly the size and shape of a Hershey's Kiss and a BNC connector. The Iron Horse is good for 2m/440/800 and works very well, its also good for a dual band ham radio, they claim it'll take up to 50w for transmitting, but I think I'd hold it down around 25w. The only place to buy one locally is C.T. Morgan & Assoc. 692-7911, they sell for about $20.

Several of the old commercial trunked systems have disappeared from the air, that's why you don't hear as many anymore.

How is the scanner doing on VHF public safety?

Jonathan

1478. APCO P-25 Receivers - New Player

Yahoo group: chattradio
Date: 2002-05-25 07:55:13 UTC
From: Jonathan Guy
Topic: 1478 Message: 1478

Apparently AOR introduced a new APCO P-25 decoder at the Dayton Hamvention this year. From what I have found it will have to have a discriminator tapped scanner to pull the signal from. AOR says it can be used with their high end scanners, but unless it will "reaction tune" as a control channel mode scanner, I'm not really sure what benefit this will be to someone in Nashville or other city with a P-25 Trunked System unless you can use a trunk-tracking scanner.

Expected delivery is 4-6 months, so we have a race between AOR and Uniden to see who can hit the market first!

The impression I got from reading an updater regarding the Dayton Hamfest, and the introduction of the ARD5000, on the AOR-UK site doesn't sound like we will see the new unit in 2002.

AOR-UK posted the following regarding the ARD5000 on their website this past Wednesday:

ARD5000

A new 'software radio' is being developed by AOR Japan. Connection is to the 10.7MHz I.F. output of the AR5000 so that DSP demodulation of data modes can be achieved, potentially features such as TRUNKING can also be supported. Production is still some way off, no further information is available at this time.

First off, thanks for the suggestions I'll be sure to try them out. As far the reception on the VHF public safety frequencies goes, its really hit-and-miss it seems at times lately. Some frequencies transmissions seem to "fade out" and at times the scanner just stops on a frequency as if its an open carrier (frequencies it never used to do this on before), but this "open carrier" isn't received with one of my other scanners even in the exact same location. As far as the loose antenna connection goes, how is the best way to correct a loose antenna connection?

You'll probably have to take the back cover off, and check the lead that comes from the bottom of the antenna jack, a quick check is to try and wiggle the antenna and see if the connector moves at all. The connector will require soldering, IF it isn't the antenna itself. That may solve the fading you mentioned...let's hope so. Just be careful not to put too much heat to the PC board the antenna is connected to.

Have you tried to reset the scanner? You'll loose all your programmed freqs, but maybe the micro-processor just got confused. Since you mentioned the scanner stops on freqs that aren't really active...I would start to suspect the scanner itself, a reset MIGHT cure it, but I'd wiggle the antenna first and try another antenna in case the duck itself has the problem.

Jonathan

My advice is worth every penny paid... <grin>

2 possiblities:

I don't know if you're doing this from a single location, or while out driving around.

A - Single location, something is interfering on 147.000

B - Mobile or different location, may be a birdie for that particular scanner.

Since you're using it mobile, it's possible that you're vehicle might be generating the birdie. Try the radio at home, or in another car. Which scanner are you having the problem with? Are you running the scanner using the vehicle as a power source? Are you using the cigarette lighter or a "power point"? Do you have any other radios or electronic devices nearby or powered by the vehicle?

Check your owners manual and see if 147.000 is a listed birdie. If the manual shows it to be a listed birdie it probably can't be cured since listed birdies are known by the manufacturer to be generated by the radio itself.

This is admittedly a long shot, but it's worth a try.
Program 168.4 mHz into your scanner.
With a lot of luck, the unwanted signal will be missing and you'll be
able to hear the ham transmissions from 147 mHz.
Same trick folks used to get around cellular blocking on some of the
older scanners.

1491. "Redistribution" of 800 users...

Yahoo group: chattradio
Date: 2002-05-27 17:45:41 UTC
From: Matthew Sadler
Topic: 1491 Message: 1491

With Nextel shutting down their old analog trunking systems in Chattanooga and on Oswald Dome (served the Cleveland area) both on May 15th, it's caused some redistribution of users to other systems...

In Bradley County, the Sheriff's Department is putting up (actually, it's already there) a conventional 800 MHz repeater, on 856.4875 MHz to be exact.

In Chattanooga, users of the old Nextel system have already shown up on both the Tri-County Communications and the Chattanooga SMR systems. For details, visit the ScanChattanooga homepage at http://www.scanchattanooga.com/ . One new discovery that I haven't yet posted is Angel EMS, which is on the Chattanooga SMR system using talkgroups 402-0 and 402-1. This means that both Medic One Ambulance and Angel EMS are using the same system.

No doubt this story isn't through yet... with Nextel floating their 800 MHz reallocation plan, it's sure to continue to evolve. Of course, no matter what changes, you can always visit http://www.scanchattanooga.com/ to keep up-to-date with the latest changes!

Matthew:
The departure of the Oswald Dome facility has left left our trunking scanners in fear of becoming paperweights in Cleveland! When I'm going out of town, I usually like to program my scanners ahead of time for the trip. That control signal from Oswald Dome has really been handy for temporary use in programming talkgroup IDs into the Pro 94 and Pro 91, since both of these scanners must lock onto a control signal before you can enter the talkgroup IDs. I can seldom get a good enough lock on the Chattanooga TRS control signal for this purpose. I have, however, since the departure of the Oswald Dome facility, found a fairly strong Motorola control signal at 858.7375 mHz. A quick check of the FCC database did not identify this signal. Any idea who it belongs to?

It's the Athens Utilities Board system. Three channels (uh huh, three) at 856, 857, and 858.7375 MHz. Their license has expired (oops) but in service and on the air it remains. I believe it is a type II system as well, which is kinda strange. I don't have anything else beyond that, so any information you could pass along would be much appreciated and will be added to the website.

Believe it or not, you actually can get one channel trunked systems from Motorola, as part of a SmartZone system. It's called voice on control, and when the system gets a request from a unit to talk, it cuts out the control channel and allocates it to voice. These are generally used to cover very low traffic areas. These are generally used on wide-area (think statewide) systems.

> With a lot of luck, the unwanted signal will be missing and you'll be able to hear the ham transmissions from 147 mHz.

While this might work with a first or second I.F. of 10.7 MHz., the Pro 43 scanner uses the following intermediate frequencies, according to the manual:

.....1st I.F. 608.005-611.2 MHz
.....2nd I.F. 48.5 MHz
.....3rd I.F. 455 kHz

Since the original poster mentioned that the problem occurred in his vehicle, no matter which antenna he used, I would consider four possibilities:

1 - it's a birdie

2 - it's interaction with the car radio, or a cellphone or another radio in the car ... 147.0 minus 48.5 puts us into the FM broadcast band. If you normally have the radio on, see if the unmodulated signal disappears when you change the FM station. I would also try pulling the fuse on the car radio. Try turning any other radios / cellphones in the car off.

3 - it's interaction with the car's computer control system. Depending on the vehicle, you should be able to pull the fuse on it also ... in most cases, it will just clear the memory and any trouble codes, and may take some drivetime for the computer to set itself again.

4 - do you have the scanner's audio being played through the car's sound system, via a casette or audio modulator that requires you to tune to a specific FM frequency?

I hope the suggestions help. Errant carriers can be a real problem to diagnose. I've had my share at home, in the hobby room.

1. Fire\Rescue districts
2. EMS districts
3. Walker County SO Sectors
4. GSP Sectors

I have a county state maps on my wall and would like to mark them for referencing calls.

Thanks

Luke Hoffmann

If memory serves, GSP in NW GA uses 1 post for 2 counties:

Lafayette Post/Dispatch: Walker & Dade Counties

Dalton Post/Dispatch: Whitfield & Catoosa Counties

I think the Police Call book for Georgia has a map with the post assignments broken down.

From: sdtnvol42
Topic: 1501 Message: 1501

on the listing on the ham radio list it has ctcss codes listed.

is the ctcss code and a pl code the same thing. im trying to program my new kenwood thf6a tri band with the local repeaters and it has a function for tone, ctcss, dsc.

several repeater list have pl 100.0, or ctcss 67.0, i am a ver newbie to this and am a bit confused. can anyone clearify this for me i would sure appreciate it

CTCSS and PL are the same thing. CTCSS is the technical name, and PL (Private Line) is the trademarked name that Motorola uses. GE calls it Channel Guard (CG), again, same thing just a trademarked name.

thanks, so if my radio has features to enter a tone. tone, ctcss, which should i add the pl under the tone or the ctcss. it gives you a choice to enter like 100.0, or 88.7, into the Tone section, but also gives you a choice to enter in the ctcss section.

like on your repeater list should i enter the tone under ctcss, to make it work.

The Kenwood may use T (for Tone) in the display for tone encode (your radio sending the tone to the repeater). if CTCSS pops up -AFTER- T then that will be tone decode. Just because an amateur repeater needs a tone to access it, doesn't mean it also transmits a tone.

If you have tone decode turned on, and your radio doesn't hear the repeater anymore, don't panic, just turn the decode feature off.

1506. Music City

Yahoo group: chattradio
Date: 2002-06-07 03:28:20 UTC
From: richard4537312
Topic: 1506 Message: 1506

Just got back from a 3 day trip to Nashville. Despite Metro's migration to digital, scanning is still alive and well. The Metro Nashville Airport Authority Type II Motorola system is still analog and provides some fairly interesting listening. Noted talkgroups included

25328 Security
25264 Maintenance
25200 Unknown
24688 Security, special assignment
24576 Unknown

The Vanderbilt University Medical Center type I Motorola system at least appears to have been expanded to cover departments of the University outside the Medical Center. Well known conventional VU frequencies are now silent.

One possibly disappointing trend. Several digital signals were noted in the 450 mHz news media band. I suspect that Metro's analog absence has caused scanner listeners like us to turn to the media frequencies, and they are only reacting as might be expected.

1507. Re: ham radio pl , ctcss, codes

Topic: 1501 Message: 1507

Jonathan is exactly right. The F6 shows T in the display when a tone is programmed to be transmitted. It shows "CTCSS" when tone decode is activated. Don't use CTCSS unless you're sure the repeater retransmits the tone. This can be a neat feature if the repeater you hang out on does not require a tone, and it retransmits whatever tone it receives. This way you and a friend could both use CTCSS, or tone decode, and your radios would not un-squelch unless one of you was calling the other. On the other hand, someone might answer your call, and you would not hear them- kinda rude.

Best wishes,
Jim

Is it possible that the news media radios could be programmed to
transmit on their appropriate freqs. as well as scan metro's freqs?

If the digital signals sounded like burst signals you could have been monitoring a studio to transmitter link. Also do keep in mind that monitoring broadcast auxillary comms is illegal under the 1986 ECPA.

1511. help with handheld tranceivers

Yahoo group: chattradio
Date: 2002-05-29 12:41:06 UTC
From: sdtnvol42
Topic: 1511 Message: 1511

i am requesting some feedback from those of you with more experience with HAM RADIO Handheld tranceivers. I just passed my tech no code and am awaiting fcc to assign my call numbers. Its been about 12 days so i assume with the holiday it will push it back to about 20 days or so??

I am torn between two new handhelds and i am going to purchase one of them on saturday at the atlanta hamfest. I am leaning towards these two at this time and would like some feedback on a couple of items of concern

yaesu vx7r has 3 bands 50-144-440 and 220 @3watts.

Is there enough ham traffic on 50-54 locally to consider this a plus

kenwood thf6a does not have 50-54 transmit but has
5 watts 144-220-440, but it receives usb, lsb, which if im not mistaken the yaseu does not receive usb lsb.

the price is about the same, I like em both, but i guess im leaning towards the kenwood.

is this a good radio, for a basic newbie to the hobby??

thanks

From: shooter2jim
Topic: 1511 Message: 1516

I owned a VX-5 and presently own a TH-F6a. The VX-5 was one tough customer- I dropped it a few times from heights which I just knew would be fatal to the radio. One time it fell from the kitchen counter onto the tile floor and I lost audio. Oh well, I thought, so I smacked it and the audio returned. The transmit amp went out when the unit was about 3 years old, whether it was related to the abuse or not, I don't know. Yaesu wanted $225 to repair it, so I bought the Kenwood. So far, so good with the F6, but I haven't given it the abuse, fortunately. Drawbacks: small buttons, needs a better antenna for 220 operation, poor sensitivity on HF (but very good on AM broadcast band with the internal ferrite bar antenna). USB/LSB capability is nice, but you really dont hear much but the strongest stations. It was kind of neat to be able to hear a friend on 144 usb, but he lives only about a mile from me. I have no idea how it does on sensitivity on uhf/vhf sideband. VX-5 was much better for shortwave monitoring- unfortunately it was AM only. Put a true 220 duck on the F6, and it's great. I also have a little more intermod interference on the F6 around town. I never recall any with the VX-5.
Sorry I can't report on the "7", but that's my experience with the "5".

good luck!
Jim

22608 seems to be their security force, and 22640 seems to be their maintenance personnel. I've seen some others higher than this pop up occasionally as well but haven't been able to (well, actually, haven't bothered to try to) identify them.

And he must mean 32, as that is the normal step.

Fred:
Before I left for Nashville, I searched for some web sites, and didn't find much reliable information. Several still listed Metro's old VHF frequencies, which are now "dead silent." I took the current edition of Police Call (Vol. 7) with me, and its information for Nashville was fairly accurate. When I got home, I uploaded my Pro92 to the computer and cleaned up my SPG file a bit. As someone pointed out above, it's illegal to listen to the media communications in the 450 mHz range, and of course I did not listen to them while in Nashville. However, some frequencies around 450 mHz did mysteriously get programmed into my scanner while in Nashville. Perhaps the maids at the Hotel tampered with the scanner! I deleted them before saving my SPG file. If your using a Pro92, I'd be happy to share my SPG file with you.

Burnett Eric <burnett_e@m...> wrote:
>What was the reasoning behind the legislation regarding the 450 mhz scanning prohibition?

As Richard indicates there is no logical reason. It was part of the 1986 ECPA that made it illegal the monitor cell phones calls, illegal to sell descramblers in the US and illegal to monitor broadcast auxiliary (BA 161/450/455 MHz) comms.

As for reasoning for this law, hey, it is Congress. That says it all. That law should never have seen the light of day and if radio hobbyist would have generated more of a fuss, it wouldn't have made it through Congress. But it did we are stuck with it and even more restrictive laws in its wake. All we can do these days is remain watchful for future Congressional debacles.

1525. ScanChattanooga.Com Outages

Yahoo group: chattradio
Date: 2002-06-18 02:01:10 UTC
From: Matthew Sadler
Topic: 1525 Message: 1525

ScanChattanooga.Com suffered some downtime today, due to two different causes.

We were down this afternoon due to a power outage that ran longer than the UPS would hold out, causing the server not to come back online. This was manually resolved at about 4 PM. This evening, we've had some intermittent downtime as I changed out some network hardware. Everything should now be back to normal.

From: richard4537312
Topic: 1526 Message: 1526

For about the last 15 minutes, there has been a Directv outage. It began with loss of audio. Signal has now returned. Could this mean that something catastrophic such as the loss of a communications satellite has occured?

1527. Motorola Moxy Help...

Yahoo group: chattradio
Date: 2002-06-19 06:00:59 UTC
From: DJLogan910
Topic: 1527 Message: 1527

Hey Guys,
I need some help identifying a Motorola Moxy! This is an older one, and not one of the "pretty," souped-up later models, we're talking the OLD ones! I have been unable to find jack about the Moxy on Motorola's site or anywhere else on the net! I am trying to determine if it's UHF or VHF, and find some schematics or something...ANYTHING related to it! The model # is: D24GMA3000DK ! I'm thinking by over-looking the circuitry it may be a lowband VHF, but I'm not for sure. If anyone knows anything let me know! Also if anybody has a Motorola Micor UHF manul, let me know, too!

Thanks,
Logan Carmichael (W4QXL)

Logan:
According to your model number, your Moxy is a dash-mount ("D"), 25-
watt ("2"), UHF ("4"), with tone PL ("#"). I checked my files but do
not have any documentation on Moxy's of any split. Have you checked
Andy Brinkley at Brinkley Electronics in NC? He has a web site.....

1529. For Sale: Icom IC-T81A 4-band handheld transceiver

Yahoo group: chattradio
Date: 2002-06-23 22:52:41 UTC
From: Matthew Sadler
Topic: 1529 Message: 1529

For sale:

Icom IC-T81A handheld transceiver. Covers the 6 meter, 2 meter, 70 centimeter, and 23 centimeter (yes, 1.2 GHz) bands with 100 memory channels. 5 watts out on all bands except 1.2 GHz, you get 1 watt there. In excellent condition, just lightly used. Includes the radio, battery, stock antenna, a stubby antenna suitable for 2 M and 440 use (I used it primarily for RX), the manual, wall wart charger, and if I find it the box too. Selling it 'cause I use 440 about 95% of the time when I'm on the air on the ham bands, and the Motorola MTS2000 I've picked up covers the 440 ham band just fine in addition to the 450 MHz media frequencies which I use as well. I can't honestly recall the last time I used this radio. I stand behind what I sell, if you're not satisfied just return it in the same condition as you got it within a week and I'll give you your money back, no questions asked.

Asking $225, will meet you anywhere in the Chattanooga area to drop it off. Would prefer to sell it local than to eBay it. Would also consider a trade for a VHF Motorola HT1000 or similar Motorola commercial VHF HT.

Reply ---OFF LIST--- if interested to mws@... .

1538. Lets Share Our PRO92 Files

Yahoo group: chattradio
Date: 2002-06-29 23:26:58 UTC
From: richard4537312
Topic: 1538 Message: 1538

I've just uploaded my PRO92 spg file to the files area, in hopes of stirring up some interest if file sharing. It's far from perfect, and I'd certainly appreciate any suggestions. If you're using a PRO92 in the Cleveland-Chattanooga area, why not take a few minutes to upload your file? The great thing about these computer programmable scanners is that you can effectively "test drive" someone else's scanner, and a few minutes later put everything back exactly the way it was before! Considering Radio Shack's recent clearance of the PRO92, there are probably lots of new owners out there who would really appreciate our sharing our files with them.

1540. BROADCAST scanner audio online - info needed

Yahoo group: chattradio
Date: 2002-07-03 17:06:50 UTC
From: Victor Healey
Topic: 1540 Message: 1540

NEW [version 1] SOFTWARE MAY BE APPLICABLE TO SCANNING HOBBY

Hey I think I have made an important discovery regarding re-broadcasting a signal, say from a scanner. I need some private information ASAP regarding the attempts to place a scanner online as discussed a few months ago say on Scan-Atlanta. Anyone who was involved in that or a similar attempt to place a scanner online please write me privately and answer one or more of the following...

1.. Was there a limit on how many DIFFERENT people who could connect to your signal?
2.. Exactly how many different users could in reality connect to your signal?
3.. Did each new connection cut down on the total Internet data bandwidth available to your PC for other uses?
4.. Could you send more than one distinct scanner signal at the same time (I.E. could you send say three different active trunking systems using three different scanners)?
5.. If you weren't the source but the receiver (distinct user) how reliable was your connection to the desired signal?
6.. How many were there connected to the same source with you at the same time?
7.. Were there any ISP, server, software fees, or other costs involved in re-broadcasting a scanner signal?
8.. How difficult was it to set up to send a signal out?
9.. What software was used?
10.. What was the underlying internet technology?
11.. Did the receiving user need special software to hear your signal?
There are more questions but I can't think of all of them right now. I am not interested in talking to anyone who wants to mention you can send a signal using the chat feature of certain software. I am interested in the type of signal where it comes from your server PC and thousands can of free choice connect/disconnect and tune in at will.

Please write privately off list to healey@... To each who contributes the knowledge I need I will reveal to you what I am excited about before I publicly post it anywhere else. This may not be new at all but just new to me or I might be on to something big that no one has thought of before. It is also possible we can not do this in real time which would be a killer.

If this isn't a workable concept - I will not be making any more posts about it other than to thank the ones who wrote.

I know that sounds strange but please bear with me.

If this idea works I will post step by step set of instructions on how to set up your [WINDOWS] PC for this.

Do NOT REPLY TO THIS LIST.

Remember to write direct to healey@....

I am sending this query to some lists [yeah I know it is SPAM] where I do not read the daily posts because of time constraints. Please use the word BROADCAST in your subject line so my software can flag it and separate out your message. Otherwise it may get deleted in my rush though the email which would be a waste of your time.

If I have the time, I would like to resolve this before the 4th of July so if any thing happens anyone of us can be online with local signals.

Thanks

Vic Healey

WRCB is the successor to WRGP; both on TV channel 3.

Don't remember the year but as an aside the call letters WRGP were for businessman Raymond G. Patterson.

Jim Nabors aka Gomer Pyle also worked there briefly as a film editor. Also Roy Morris was news anchor.

From: Chris Palmgren
Topic: 1541 Message: 1547

OK.. Matthew.. we'll just finish this one right now:

On May 6, 1956, Channel 3 (Chattanooga's second television station) signed on in Chattanooga as NBC affiliate WRGP-TV. The original facility was located across the street from the rose garden in the 1200 block of McCallie Avenue. Most of the early programming that didn't come from NBC was live and local. Channel 3 was the first station in Chattanooga to broadcast live from remote locations in the early 60's. Sock hops and wrestling were common events on the young station back then.

In 1959, WSTV Inc. bought the station from Raymond G. Patterson (RGP) and several local investors. In November of 1961, the Federal Communications Commission gave approval to a Massachusetts greeting card company to acquire the station, and United Printers and Publishers, which later became Rust Craft Broadcasters (RCB), took over. The facility on McCallie was small; so, in order to accommodate the growing station's personnel and equipment, the current studios were built at 900 Whitehall Road. With the move in 1968, came color, and new call letters. WRGP was changed to WRCB.

Ziff Corporation bought WRCB from Rust Craft in May of 1978. In 1982, Rust Craft sold the station to Sarkes Tarzian, Inc., which owns it today. Sarkes Tarzian, Inc. is named for Sarkes Tarzian. Mr. Tarzian was a prolific inventor. He developed several important components and systems used in radio and television sets. Sarkes Tarzian held the position of Chairman of the Board until his death in October of 1987. Tom Tarzian, Sarkes' son, became Chairman upon his father's death, and continues in that position today.

The current management team represents years of television experience and a firm commitment to serve local residents. The top priority at Channel 3 is to provide its viewers with the best local news and weather coverage.

In addition to WRCB, Sarkes Tarzian, Inc. owns and operates KTVN-TV in Reno, Nevada; WAJI-FM and WLDE-FM in Ft. Wayne, Indiana; and WGCL-AM and WTTS-FM in Bloomington, Indiana. Sarkes Tarzian, Inc. headquarters are located in Bloomington, Indiana.

-- from WRCBTV.COM

BTW... Pless.. Channel 9's old callsign was to be WROM. However, the FCC wouldn't allow TV 9 to have their studios in Rome, GA, and transmitter site on Signal Mountain like they had planned. Therefore, "Chatty-9" came to Chattanooga and signed on the air as WTVC (stands for TV Chattanooga) from its transmitter building on Signal Mountain in 1958. The transmitter remains on the mountain, but WTVC's offices and studios moved to the Golden Gateway in downtown Chattanooga in 1966, then to Highway 153 in 1999. WROM radio still broadcasts to this day in Rome, GA.

WDEF-TV was Chattanooga first television station and signed on the air April 25, 1954, with the original studios in the Volunteer Life Building. Channel 12 carried both NBC and CBS until 1956 when NBC went to Channel 3. Chattanooga got ABC when Channel 9 signed on the air in 1958. Prior to that, most residents in Chattanooga watched WSB-TV (NBC), WAGA-TV (CBS), and WLWA (ABC) from Atlanta. WSB and WLWA (now WXIA) switched affiliations in 1980. Prior to 1976, WXIA was WQXI "Quixie in Dixie." The XI is Roman numeral 11 for "11 Alive - WXIA."

WDSI's old callsign was WRIP. Their studios, along with WRIP radio (now WUUS 980 and Rock 105) were located in Rossville. They changed callsigns to WDSI in the early 1980s and used a "Dizzy" dinosaur for station promotion.

This is fun! We need to have more trivia questions. I can think of a ton to do on Chattanooga radio.

OK, it's trivia time... no prizes for whomever knows the answer to this one, though... our points are just like they are on the show "Whose Line Is It Anyway?" - they're completely meaningless.

Once upon a time, there was a TV station in Chattanooga with the call letters WRGP-TV. It's still on the air now, but who ARE they now?

Bonus points for knowing the year that they changed call letters.

1548. Trivia Time

Yahoo group: chattradio
Date: 2002-07-14 19:06:32 UTC
From: Matthew Sadler
Topic: 1541 Message: 1548

For those of you who answered WRCB-TV... I'm impressed! Surprised that so many of you knew the answer. Guess I'll have to try harder next time.

I'm working on some revisions to the broadcast station pages on www.scanchattanooga.com that will eventually include callsign histories (particularly for radio stations, they tend to change a lot) as well as some detailed pages for prominant stations that will include brief histories, tower pictures, and such. Of course, for TV stations, there will be DTV information as well.

For those of you who have, really any, history tidbits on Chattanooga-area broadcasters, be it AM, FM, or TV, feel free to pass them along and when the pages are revised and posted you will be credited. I'll probably go down to the public library and dig through the newspaper clippings sometime as well; they are a wealth of information.

Anyway, I'm off to work in a few minutes; your friendly webmaster is employed by WTVC... I mostly work in master control but occasionally run camera in the studio for newscasts. And, NO, I rarely watch TV when I'm not at work... 10 hours or so of it a day gets old.

Thanks for the very informative post. Question: you stated that prior to local TV stations coming on the air, Chattanooga residents watched Atlanta stations. Were the signals stronger then? Growing up on Lookout Mtn, I watched those same stations but off the mountain the signal is too weak.

Also, why did WQXI (11 Alive) change their call signs in the timeperiod indicated. Was there an ownership change?

Thanks again for your post. I really enjoyed it.

I can't answer why 11 changed their call signs, but they do stand for 11 Atlanta (XI - Roman numerals, A - Atlanta).

Matthew & group:-
Yes, I remember when WRCB was WRGP and Ch 3 had a rather good signal here in Knoxville. It was a NBC affiliate and was on the air before our local NBC affiliate was (1956?).
Mort Lloyd was the news announcer.
I did not know the significance of the initials of Raymond Patterson, but, when I went to high school in Rome, Georgia, I was informed that the station had started there and moved to Chattanooga, a larger market. I was also told that the owner of the motion picture theatres in Rome had cut his ticket prices drastically in response to television. When I was there (1964-1966), movies were still cheap.
One day, WRGP receptionup here just stopped. The television repairman who kept our old Bendix going told us that the station had changed its radiation pattern (any info here?).
The other television station, and the one to which I listened when I lived in Chattanooga in the early 1970's, was associated with WDEF radio station and was located on South Broad Street near Double Cola. I think it was a CBS affilate and I listened to their AM radio station as well. Please help my very spotty memory and tell me the name of their well-known personality-I enjoyed his radio programs very much.
Keep up this discussion-I am enjoying it very much.

WDEF TV12, our local CBS affiliate, is still located next to the old Double Cola plant on Broad St. Their long-time personality on both radio & TV is Luther Massengale. I believe Luther is still connected with both radio and TV, even tho the radio part was sold off a couple of years ago.

I understand Mort Lloyd was employed at Channel 12 for a while and then Channel 3. His wife, Marilyn Lloyd, was elected and took over his US House seat following his death from an airplane crash (Mort was a pilot). Roy Morris was also the main anchor at Channel 3 for many years. Channel 12 was the dominant news station in Chattanooga during the 1960s and 70s and Mort Lloyd was very popular. Channel 12 was the first Chattanooga station to use a news helicopter during the 1970s. However, the station has never really been able to regain the dominance it once had in the market after Mort Lloyd was gone.

You are thinking of WTVC Channel 9. The station has its roots in Rome, GA (see my previous posting). WTVC was owned by Martin Theaters for many years. Visit http://www.newschannel9.com/vnews/history/memories for more information.

Luther Masingill is now 80 years old and is still on the air doing his "Sundial" show on WDEF-FM 92.3. I believe he holds the title for longest running broadcast radio personality at the same station. He's been a part of WDEF radio since the 1940s. Harve Bradley hosted the "Road Show" on WDEF-AM 1370 in the afternoons for many years. You can read more about WDEF at http://www.wdef.com/aboutus.shtml. Their studios started out in the

Volunteer Life Building before moving to the 3300 block of South Broad Street.

From Turner.com:

In 1970, R. E. Turner, then head of a successful Atlanta-based outdoor advertising firm, purchased WJRJ-Atlanta, Channel 17, a small, struggling UHF station, and renamed it WTCG, for parent company Turner Communications Group. Through careful programming acquisitions, Turner guided the station to success. In December 1976, WTCG originated the "superstation" concept, transmitting via satellite to cable systems.

Very good! I remember the day channel 17 first went on the air as WJRJ. It was the second UHF station in the Atlanta area. (The first was WATL channel 30, an educational station.) At the time we had a TV that did not have a UHF tuner built in. We had just gotten a UHF to channel 3 converter that sat on top of the TV. We adjusted the loop antenna and the analog tuning dial on the converter and tuned in a fuzzy picture of a blue jay, which was used as the station logo.

From: Matthew Sadler
Topic: 1563 Message: 1563

OK, here's the next quiz... each of these FM stations have had different call letters at some point. At least three of these I will be pretty disappointed if no one gets, the rest could be kinda difficult.

WOGT 107.9
WGOW 102.3
WSKZ 106.5
WRXR 105.5
WJTT 94.3
WUSY 100.7
WALV 95.3

Matthew,

Good trivia question. I'll give it a shot.

WOGT was Contemporary Christian WJRX 107.9 "RX-107" (still have one of their stickers).

WGOW was WYVY (Adult Contemporary "Y-102") and back in the late 70s and early 80s it was WCHU (Standards "Choo-Choo 102"), but the station has also been Urban Contemporary "WNOO-FM" at one time and has had other callsigns over the years.

WSKZ 106.5 was Easy Listening WYNQ "Wink 106" during the 70s and also Classical "WLOM" when the transmitter was located on Lookout Mountain (now the site for WMBW).

WRXR 105.5 was Adult Contemporary WLMX "Lite Mix 105" and back in the early 80s it was Album Rock WOWE "Rock 105" (still have one of their stickers) and Rock "WRIP-FM" in the 70s.

WJTT 94.3 was Disco "WSIM" back in the late 70s.

WUSY 100.7 was Adult Contemporary WQLS "Q-101" and WLCY for a brief period before that.

I'm not sure about this one, but I believe WALV 95.3 was at one time WCLE (now on 104.1).

And here are two to add... what was the callsign for WAWL 91.5 back in the 80s??? Also, what was the name and format for 102.7 when it came on the air in 1990?

And does anyone remember "D-96" when WDOD-FM first attempted rock in the late 70s?

CP

Matthew,

Oh.. I forgot to add.. WGOW was Classic Rock WFXS "Fox 102" for a while after it was "Y-102"

Chris

OK, here's the next quiz... each of these FM stations have had different call letters at some point. At least three of these I will be pretty disappointed if no one gets, the rest could be kinda difficult.

WOGT 107.9
WGOW 102.3
WSKZ 106.5
WRXR 105.5
WJTT 94.3
WUSY 100.7
WALV 95.3

Topic: 1563 Message: 1567

Glen,

Yeah.. you are correct about 100.7. Those Cleveland stations throw me off. WUSY was WCLE before WQLS. The old 100.7 tower is still located on White Oak Mountain on Firetower Road and is currently being occupied by 95.3 (WALV moved their transmitter to White Oak Mtn. recently.) Now... what was WALV's old callsign? Seems like I remember something with a "Q" in it (besides Q-101). Plus, for some reason I want to say the station was on another frequency rather than 95.3?? Let's see if anybody has an answer.

Matthew,

Good trivia question. I'll give it a shot.

WOGT was Contemporary Christian WJRX 107.9 "RX-107" (still have one of their stickers).

WGOW was WYVY (Adult Contemporary "Y-102") and back in the late 70s and early 80s it was WCHU (Standards "Choo-Choo 102"), but the station has also been Urban Contemporary "WNOO-FM" at one time and has had other callsigns over the years.

WSKZ 106.5 was Easy Listening WYNQ "Wink 106" during the 70s and also Classical "WLOM" when the transmitter was located on Lookout Mountain (now the site for WMBW).

WRXR 105.5 was Adult Contemporary WLMX "Lite Mix 105" and back in the early 80s it was Album Rock WOWE "Rock 105" (still have one of their stickers) and Rock "WRIP-FM" in the 70s.

WJTT 94.3 was Disco "WSIM" back in the late 70s.

WUSY 100.7 was Adult Contemporary WQLS "Q-101" and WLCY for a brief period before that.

I'm not sure about this one, but I believe WALV 95.3 was at one time WCLE (now on 104.1).

And here are two to add... what was the callsign for WAWL 91.5 back in the 80s??? Also, what was the name and format for 102.7 when it came on the air in 1990?

And does anyone remember "D-96" when WDOD-FM first attempted rock in the late 70s?

From: Matthew Sadler
Topic: 1563 Message: 1570

Glen's right... it was always WBDX. They were a rock station, studios were inside Eastgate Mall near the Brainerd Road end of the mall, and I think Herb Adcox was one of the owners, or maybe even the sole owner.

From: Matthew Sadler
Topic: 1563 Message: 1571

WAWL's original call letters were WCSO... that was when they were running only about 200 watts. The station now runs 11 kW ERP.

Yahoo group: chattradio
Date: 2002-07-20 12:50:29 UTC
From: Chris Palmgren
Topic: 1563 Message: 1572

102.7 came on the air as "B-103" and was Top-40/CHR. The station was owned by Herb Adcox. Their callsign is still WBDX, but is now Contemporary Christian "J-103". The studio was located inside the old Eastgate Mall, now "J-103" is in the former studio of "RX-107" on Ringgold Road in East Ridge. The transmitter is now located near the firetower on High Point. The old transmitter was located near the hang gliding park on the west brow of Lookout Mountain overlooking Trenton. Later, the station evolved into A/C "Magic 102.7" and then Talk "Real Radio 102.7" when "Fox 102" and "Real Radio" were co-located into bigger studios inside the mall (not out in the middle).

And, WAWL used to be WCSO like Matthew said. They ran a whopping 200 watts from the top of Signal Mtn. I remember when they played oldies and at night would play environmental sounds. When I went to sleep, I'd put my radio on 91.5 and would doze off to the sounds of the ocean, thunderstorms, crickets chirping, etc. It was really cool!

Let's try the AM band....

OK, here's the next quiz... each of these AM stations have had different
call letters at some point.

WUUS 980
WGOW 1150
WLMR 1450
WJOC 1490

Name them.

Okay.. after some reasearch, I believe WALV used to be WQNE in the early 80s

I'll post the answer to 91.5 WAWL's old callsign and the former name and format of 102.7 if no one answers by Monday.

Glen,

Yeah.. you are correct about 100.7. Those Cleveland stations throw me off. WUSY was WCLE before WQLS. The old 100.7 tower is still located on White Oak Mountain on Firetower Road and is currently being occupied by 95.3 (WALV moved their transmitter to White Oak Mtn. recently.) Now... what was WALV's old callsign? Seems like I remember something with a "Q" in it (besides Q-101). Plus, for some reason I want to say the station was on another frequency rather than 95.3?? Let's see if anybody has an answer.

Subject: Re: [chattradio] More Trivia - Old FM Station Call Letters

Matthew,

Good trivia question. I'll give it a shot.

WOGT was Contemporary Christian WJRX 107.9 "RX-107" (still have one of their stickers).

WGOW was WYVY (Adult Contemporary "Y-102") and back in the late 70s and early 80s it was WCHU (Standards "Choo-Choo 102"), but the station has also been Urban Contemporary "WNOO-FM" at one time and has had other callsigns over the years.

WSKZ 106.5 was Easy Listening WYNQ "Wink 106" during the 70s and also Classical "WLOM" when the transmitter was located on Lookout Mountain (now the site for WMBW).

WRXR 105.5 was Adult Contemporary WLMX "Lite Mix 105" and back in the early 80s it was Album Rock WOWE "Rock 105" (still have one of their stickers) and Rock "WRIP-FM" in the 70s.

WJTT 94.3 was Disco "WSIM" back in the late 70s.

WUSY 100.7 was Adult Contemporary WQLS "Q-101" and WLCY for a brief period before that.

I'm not sure about this one, but I believe WALV 95.3 was at one time WCLE (now on 104.1).

And here are two to add... what was the callsign for WAWL 91.5 back in the 80s??? Also, what was the name and format for 102.7 when it came on the air in 1990?

And does anyone remember "D-96" when WDOD-FM first attempted rock in the late 70s?

OK, here's the next quiz... each of these FM stations have had different call letters at some point. At least three of these I will be pretty disappointed if no one gets, the rest could be kinda difficult.

WOGT 107.9
WGOW 102.3
WSKZ 106.5
WRXR 105.5
WJTT 94.3
WUSY 100.7
WALV 95.3

1573. Re: [chattradio] More Trivia - Old FM Station Call Letters

Yahoo group: chattradio
Date: 2002-07-20 17:59:49 UTC
From: Glen Hendon
Topic: 1563 Message: 1573

Hey, great idea with the AM trivia. I've got a question about the old and very memorable WFLI-1070. I grew up with Jet-Fli WFLI and the then rock competition WGOW-1150. Does anyone know the history of WFLI? Such as when they first signed on, ownership history, etc.? I remember a few of the more popular dj's from then. -Glen (KD4LDI)

Subject: Re: [chattradio] More Trivia - Old FM Station Call Letters

102.7 came on the air as "B-103" and was Top-40/CHR. The station was owned by Herb Adcox. Their callsign is still WBDX, but is now Contemporary Christian "J-103". The studio was located inside the old Eastgate Mall, now J-103" is in the former studio of "RX-107" on Ringgold Road in East Ridge. The transmitter is now located near the firetower on High Point. The old transmitter was located near the hang gliding park on the west brow of Lookout Mountain overlooking Trenton. Later, the station evolved into A/C Magic 102.7" and then Talk "Real Radio 102.7" when "Fox 102" and "Real Radio were co-located into bigger studios inside the mall (not out in the middle)

And, WAWL used to be WCSO like Matthew said. They ran a whopping 200 watts from the top of Signal Mtn. I remember when they played oldies and at night would play environmental sounds. When I went to sleep, I'd put my radio on 91.5 and would doze off to the sounds of the ocean, thunderstorms, crickets chirping, etc. It was really cool!

Let's try the AM band....

OK, here's the next quiz... each of these AM stations have had different call letters at some point.

WUUS 980
WGOW 1150
WLMR 1450
WJOC 1490

Name them.

Wow this brings back ole memories.... Circa 1977-78 I was a young ham just ending high school and waiting to start Ga Tech. During the week I would work at WFLI AM 1070 in the engineering dept. I would hang out with the likes of Machine Gun Green, Jim Pirkel (sp?) & Max O'Bryan. As I recall Max want to be a Red Bank police officer and Mr. Bends (sp?) was the owner then. Wow Max is still on the air in the Chattanooga market today....

During the Weekends I was the midnight to 6 am jock on WDXB 1490 from a booth in the Reid House. Another young ham was the jock at WFLI Jack Roland a.k.a. Jack Edwards. We would call either other hot line to hot line all night long for hours at a time. If I recall my pay was $1.60 or $1.80 per hour and Alan Gold and Larry & Garry Mac were my boss(es) at WDXB....

1577. Chatt. AM Callsigns

Yahoo group: chattradio
Date: 2002-07-21 17:30:54 UTC
From: Chris Palmgren
Topic: 1577 Message: 1577

1150 WGOW was WAPO many years ago (the station in Jasper dumped that callsign for WWAM recently).

1450 WLMR was WMOC for many years. The station originally was WATC.

BTW, the legendary WDXB callsign is now in use by 102.5 FM in Birmingham (see www.country1025.com).

Mrs. Benns still owns WFLI radio, but sold TV-53 a couple years ago. She (Ying Hua Benns) now owns WYHB-LP 39 (see http://www.wyhbtv39.com).

1578. RE: [chattradio] More Trivia - old studio use

Yahoo group: chattradio
Date: 2002-07-21 18:46:37 UTC
From: Jonathan Guy
Topic: 1563 Message: 1578

Here's a little more trivia with a twist...

The station moved from inside the mall to a suite with an outside entrance (just to the right of the Lenscrafter's at the main entrance. The suite that formerly housed the studios is now the Chattanooga Police Department Sector 3 Precinct (Delta & George Teams). The old soundproof booth with sliding glass doors is still there, it is one of the offices now...the red "On Air" light is also still there.

-----Original Message-----
I do believe that 102.7's callsign and format used to be WBDX, owned by a car dealership in Chatt i think, and they were rock, and broadcasting from inside (studios) Eastgate Mall in its heyday.

A mag-mount cell phone antenna works great for me. Shop around for prices because they vary greatly (or did a few years ago). I got mine at Wal Mart, and added a Radio Shack TNC to BNC adapter. (Or you could cut the TNC off and solder on a BNC.) Also try hamfests - I've seen people literally giving away cellphone parts, or selling them really cheap.

Topic: 1574 Message: 1582

I've used the Iron Horse mini antenna for several years, works great. The antenna has a mag mount that resembles a Hershey's kiss, same size too. The antenna is 2m/440/800 and works better than a couple of the Radio Shack cell phone antennas that I've tried. Comes with a BNC plug and can be used to transmit for Amateur radio. I've NEVER lost one of these while driving, they're about 10 inches tall. They run about $21

C.T. Morgan and Associates, 2300 E. 34th St, 629-7911 is where I've purchased mine locally.

The following chattradio poll is now closed. Here are the final results:

POLL QUESTION: Do you plan to purchase one of the new Uniden Diginal Scanners when released?

CHOICES AND RESULTS
- BC785D Desktop, 4 votes, 28.57%
- BC250D Handheld, 4 votes, 28.57%
- Digital Card, 4 votes, 28.57%
- No, I'm not interested in either model., 2 votes, 14.29%

From: Jim Knight
Topic: 1586 Message: 1586

Does anyone know what talkgroup 20848 on the Chatt. system is? I heard a brief conversation about someone's food order the other day, not enough to get any idea who it is.

1588. New Radio Shack Scanner

Yahoo group: chattradio
Date: 2002-08-10 20:55:09 UTC
From: Jonathan Guy
Topic: 1588 Message: 1588

http://www.radioshack.com/product.asp?cookie%5Ftest=1&catalog%5Fname=CTLG&product%5Fid=20%2D525

Our newest scanner is a 1000-channel dual-trunking handheld with many features.

Features:
* Stores several large trunked radio systems
* Stores up to 1,000 trunked system ID codes
* Scan trunking and conventional channels at the same time - even scans 400MHz trunked radio systems
* Accepts and displays your text entries for easier identification of frequencies
* Displays CB channel numbers as well as frequency
* Search preset conventional police/fire, marine, CB, Ham and VHF-air frequencies for activity
* Digital weather alert displays type of alert (statement, watch or warning)

* Backlit 4-line x 12-character alphanumeric display
* Extended coverage including the 220MHz and 1260MHz Ham Radio bands
* Switchable 20dB attenuator
* PC interface
* Cloning capability with our Pro-2067 mobile, Pro-62 handheld and Pro-2053 desktop scanner

Specifications:
Model: * Pro-95
Frequency coverage: * 25-54, 108-174, 216-225, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
Jacks: * Earphone, PC interface, power
Antenna connection: * BNC
Antenna: * Flexible detachable
Battery cases: * Alkaline case and rechargeable case
Dimensions: * 6-5/16x2-5/8x1-3/4"

Add "AA" batteries or adapter, AC #273-1767/C or DC #273-1810/C

1589. RE: [chattradio] New Radio Shack Scanner

Yahoo group: chattradio
Date: 2002-08-10 21:10:55 UTC
From: Jonathan Guy
Topic: 1588 Message: 1589

The picture on the website looks like the PRO-93. The only real difference I see is 1000 memories vs. the 93's 300 memories.

The claim of 1000 talkgroups is nothing new, 100 id's in 10 banks....I'm still hoping the new Uniden 785 mobile and 250 handheld will have more than 100 id's per bank.

I think I'll wait around and buy the Pro95A, Pro95B, or Pro 95C, after they've had a chance to work out the bugs. Who knows? The Pro95D might do digital.

1591. 168.575 active today

Yahoo group: chattradio
Date: 2002-08-14 22:51:10 UTC
From: Jim Knight
Topic: 1591 Message: 1591

For the first time in at least a year, I heard activity on 168.575 with a PL tone of 103.5. This freq has in the past been used by the TVA power service center near Chickamauga Dam. Today, someone tried repeatedly to bring up an autopatch. Almost every time they tried, a recorded human voice said "Your call can not be completed as dialed. Check your directory and try again. This is the TVA Power Control Center." One time they tried the connection was made and they got somebody's voice mail, but before they could leave a message the automated repeater voice announced that the autopatch had timed out. I wonder if this was someone trying to hack the system, or just somebody having no luck today. Anyway we know this freq is still used in the area.

1592. Tevelvision while driving and GA Law?

Yahoo group: chattradio
Date: 2002-08-16 21:13:01 UTC
From: Vic Healey - Ki4je
Topic: 1592 Message: 1592

I have noticed that more and more of our metro 'homeboys' are watching TV while driving at night. Several times I in the last two seeks I have thought of calling the police and complaining about their erratic driving etc. but it was so obvious that I assumed that any unit on patrol would grab them.

The problem with calling 911 is that it takes so long to work through the system that the perpetrator is long gone before a lookout is even broadcast. This is regarding complaints in the metro area, I have heard other agencies (Greenville SC, Cobb County GA, for instance) interrupt me while I am talking so they can broadcast an immediate bolo, yet the abundance of these violations are in the metro area where they need to dealt with.

Now I notice that there is an article in USA Today that says this is a new fad in the USA, "Adding TVs to cars, including in the steering wheel, is popular with professional athletes, rappers and urban youths. "

http://makeashorterlink.com/?U26342A81

So my question for the group is, "Is it legal in Georgia to even have a TV in the front of a car where the driver can also watch it while driving?"

Working at night I find it absurd that GA never thought to pass a law regarding such a dangerous practice. If not we need one urgently and when we get it that law it should be enforced as readily as the stricture against DRUNK DRIVING!

Don't even think of complaining to me about metro cell phone users driving while talking on handheld cell phones until this more serious issue is addressed! Yes I think they are a hazard too but no where near as much as these youths who are completely out of control! I wish I could video tape how bad these driviers are like they do on FOX TV in COPS.

Have you noticed this also?

Vic Healey

1594. Digital Question for Phil Bredesen

Yahoo group: chattradio
Date: 2002-08-18 04:03:28 UTC
From: richard4537312
Topic: 1594 Message: 1594

The following is the text of a message I have emailed to the Phil Bredesen for Governor campaign. Unless someone vigorously objects, I will promptly post any response I receive.

Soon after the end of Mayor Bredesen's second term as mayor, Metro Nashville and Davidson County implemented a comprehensive Motorola 800 mHz trunked radio communications system. Radio communications for virtually every department were consolidated under this system. The system differed from those already in use in Knoxville, Chattanooga, and other areas of the state in one notable (or notorious) aspect. All communications were digital, instead of analog. The effect of this difference is that the communications cannot be monitored by over the counter receivers, commonly known as scanners, readily available at such retail establishments as Radio Shack.

Let me be the first to acknowledge that certain sensitive government communications, such as those used by drug enforcement authorities, should never be open to public monitoring. However, scanning is a legitimate hobby enjoyed by thousands of Tennesseans, particularly the elderly. It is common knowledge that family members of police officers, firefighters and other emergency workers routinely monitor the appropriate frequencies to be assured of the safety of their loved ones, particularly during times of crisis. Those who advocate openness in government simply cannot justify the implementation of a radio communications system which essentially blocks all public monitoring of government communications.

The technical advantages of digital communications, sometimes touted by such providers as Motorola in terms such as the "APCO25 Standard," are well known to be few when compared to the increased expense of implementing and maintaining the communications systems. These systems cost millions of dollars when implemented in an analog form, and millions more when implemented in a digital form.

In light of this background, I have three questions. If you choose to respond, please kindly refrain from quoting materials provided by Motorola. Their interest in selling these systems is enormous, and their lobbying efforts are overwhelming. Every scanning hobbyist readily recognizes Motorola's rhetoric, and its credibility among us is minimal.

1. What role, if any, did Mayor Bredesen have in the implementation of the digital 800 mHz Motorola radio communications system currently used by Metro Nashville and Davidson County?
2. Can Phil Bredesen agree that the implementation of a radio

communications system that denies public monitoring of all government radio communications is inconsistent with prevailing principals of openness in government?
3. Will Governor Bredesen oppose the purchase of digital communications systems for use by state government agencies?

1595. Re: [chattradio] Digital Question for Phil Bredesen

Yahoo group: chattradio

1597. Re: Digital Question for Phil Bredesen

Yahoo group: chattradio
Date: 2002-08-18 22:06:29 UTC
From: shooter2jim
Topic: 1594 Message: 1597

I believe the questions (and responses, if any) are entirely within the scope of this group, and should be asked of both Bredesen and Hilleary. You may not have agreed with the way the questions were worded but I, for one, would like to know if the next governor intends to put all state agencies on a digital communications system. Would this not affect us as radio listeners in the Chattanooga area, or did we secede from the rest of the state?

I hope no one bases their choices on ONE issue, but given the latest TN budget debacle (as well as some of the poor financial decisions- Adelphia- that have been made in Nashville in recent years), I don't have a problem with anyone asking the candidates about the prudence of spending millions of dollars of OUR money on radio equipment that may have a poor return on investment as well as be a detrement to our hobby and possibly even endanger the users of that equipment- (I know of one local agency who occasionally MUST revert to an all-analog system when their handies can't hit the city trunked system from certain locations).

Had this been AFTER the election, then the questions really wouldn't have mattered.

Respectfully,
Jim Myers

1598. RE: [chattradio] Digital Question for Phil Bredesen

Yahoo group: chattradio
Date: 2002-08-19 00:03:56 UTC
From: Carr Fred
Topic: 1594 Message: 1598

I agree w/ K4ERC.....and wish to add that most communities going digital are doing it to compress more talking and transponders into the same bandwidth.
As a Ham, I am more concerned with other agencies taking over our frequency spectrum and pushing us into smaller and smaller spaces than I am about listening to them.......

1600. RE: [chattradio] Tevelvision while driving and GA Law?

Yahoo group: chattradio
Date: 2002-08-19 13:58:23 UTC
From: Burnett Eric
Topic: 1592 Message: 1600

I don't know about Ga, but specifically in Chattanooga it is against the law but as always it's up to the officer's discretion about enforcing it. Until there's a big push from the "higher ups" in the police agencies and political circles I doubt it will get much attention. As you have also found out, getting the police to catch them is a whole different matter.

I would think this would be a low priority request to the police agency, on a prioritized call response system. There are a lot of official laws that don't get enforced here for the same reason, no parking sign enforcement, trucks 3 axle or more prohibited enforcement , citizens panhandling for one charity or another in the street, the list goes on.

Eric Burnett, KE4KGF
Traffic Engineering Division
City of Chattanooga

Subject: [chattradio] Tevelvision while driving and GA Law?

I have noticed that more and more of our metro 'homeboys' are watching TV while driving at night. Several times I in the last two seeks I have thought of calling the police and complaining about their erratic driving etc. but it was so obvious that I assumed that any unit on patrol would grab them.

The problem with calling 911 is that it takes so long to work through the system that the perpetrator is long gone before a lookout is even broadcast. This is regarding complaints in the metro area, I have heard other agencies (Greenville SC, Cobb County GA, for instance) interrupt me while I am talking so they can broadcast an immediate bolo, yet the abundance of these violations are in the metro area where they need to dealt with.

Now I notice that there is an article in USA Today that says this is a new fad in the USA, "Adding TVs to cars, including in the steering wheel, is popular with professional athletes, rappers and urban youths. "

http://makeashorterlink.com/?U26342A81

So my question for the group is, "Is it legal in Georgia to even have a TV in the front of a car where the driver can also watch it while driving?"

Working at night I find it absurd that GA never thought to pass a law regarding such a dangerous practice. If not we need one urgently and when

we get it that law it should be enforced as readily as the stricture against DRUNK DRIVING!

Don't even think of complaining to me about metro cell phone users driving while talking on handheld cell phones until this more serious issue is addressed! Yes I think they are a hazard too but no where near as much as these youths who are completely out of control! I wish I could video tape how bad these driviers are like they do on FOX TV in COPS.

Have you noticed this also?

1601. Scanning Opportunity

Yahoo group: chattradio
Date: 2002-08-20 02:26:01 UTC
From: Richard Marlar
Topic: 1601 Message: 1601

Law Enforcement in Georgia and Five Other States Join Forces to Arrest Drunk and Drugged Drivers

WHAT
Governor's Office of Highway Safety (GOHS) Hosts Hands Across the Border August 25 - 30, 2002
Georgia law enforcement agencies will conduct a major wave of sobriety checkpoints and community outreach activity in the eleventh annual Hands Across the Border highway safety awareness campaign. Georgia will coordinate enforcement with the bordering states of Alabama, Florida, North Carolina, South Carolina and Tennessee.

State and local law enforcement agencies in the participating states will conduct saturation patrols and sobriety checkpoints where drunk and drugged drivers will be subject to immediate arrest. The sobriety checkpoints will occur in conjunction with statewide Georgia Click It or Ticket checkpoints targeting those without seat belts or appropriate child safety restraints.

In addition, motorists at checkpoints and Georgia Visitor Centers will receive literature from law enforcement and other volunteers regarding the dangers of impaired driving and failure to use seat belts and appropriate child safety seats. Volunteers will include representatives of GOHS, community coalitions, the University of Georgia, SAFE KIDS of Georgia, area fire departments and emergency medical services.

WHEN
Sunday, August 25 through Friday, August 30, 2002

WHY
· In 2000 alone, over 1,500 people died in crashes on Georgia roadways.
· Out of this crash fatality number, one-third were impaired driver-related.
· The Georgia seat belt use rate is at 79 percent, according to the latest data compiled by the National Highway Traffic Safety Administration.
· In 2000, motor vehicle fatalities alone resulted in a total estimated economic cost of $1.33 billion. This represented a cost of $25 million each week for deaths due to motor vehicle crashes.

1607. New cell site?

Yahoo group: chattradio
Date: 2002-08-26 23:47:19 UTC
From: shooter2jim
Topic: 1607 Message: 1607

Saw a worker in a Sprint truck taking digital photos today at O.L.P.H. at the intersection of Moore Rd. and S. Terrace. When I passed, he was photographing the sign in front of the church. Possibly a new cell installation going there- something along the lines of the Universalist Church site just up the interstate??? Anyone know how the signal strength is for Sprint in that vicinity?

1608. Radios for sale

Yahoo group: chattradio
Date: 2002-08-27 00:02:03 UTC
From: Matthew Sadler
Topic: 1608 Message: 1608

Two radios for sale, from your friendly webmaster:

1) Motorola GTX 800 MHz Privacy Plus trunking mobile, model number M11UGD6CB1AN. 15 watts, 10 conventional channels and 10 trunking systems with 8 talkgroups each. Very good condition, includes like-new power cable and Motorola microphone. $150

2) Kenwood TK-860 UHF mobile. 25 watts, 32 channels. Like-new condition, works great. Includes Kenwood noise-cancelling microphone and new power cable. $200.

Now for the nasty little details: cash or U.S. Postal Service money orders ONLY. Programming these is your responsibility, not mine. They both work (very well, in fact) and I will give you a 7-day money-back guarantee if for some reason you're not happy. I will meet you anywhere (almost) in Chattanooga, and for you Atlanta readers I'm willing to drive down to Marietta or other north-side parts of the Atlanta metro area to save the costs and delays of shipping.

Oh, one other thing - not interested in trades... selling these to finance a new notebook PC.

If you are interested, please email me directly at mws@... .

Topic: 1607 Message: 1609

I recall a few months back a small controversy over this installation being proposed by some of the parents of students there at OLPH.

For what it's worth, the Chattanooga Times Free Press had this article about it last year:
http://www.timesfreepress.com/2001/dec/16dec01/celltower.html

According to the article, they are attempting to resolve a coverage issue along Interstate 24 in that area. Guess I'll keep my Verizon service. :)

1613. Ray Brent Marsh released.

Yahoo group: chattradio
Date: 2002-08-28 02:00:19 UTC
From: go4tcross@cs.com
Topic: 1613 Message: 1613

Was watching it on News 9. Then my incredibly slow brain kicked in: Turn on the scanner.

Just before they released him there was traffic on Walker SO main frequency. 151.160

Frequency was open to event traffic only.

Before Marsh reached the front door, several officers confirmed security. The escorting officer said "We're coming out" and they walked out the door. It was neat to watch on tv and listen on the scanner.

Marsh's vehicle was escorted by at least one county unit, with Duke street traffic stopped. (The SO lot exits to Duke)

Another unit was standing by at Marsh's house.

> This is for Vic Healey. It is idiots like you that call 911 for people having tv's playing in their cars so the police cannot respond fast enough to a real emergency. This is ridiculous, do you not have anything better to do.

Sorry, Chevythang ... for the most part, Vic is right. Any officer will tell you it is alot easier to deal with a distracted motorist before the accident, rather than after.

The Chattradio digest didn't include your attachment to your post, but I'm not sure how calling 911 slows the response to a "real emergency." Dispatch still determines the priority of calls in their system. And, the bottom line is that, if there regularly aren't enough units available to field the calls in a timely manner, then there aren't enough officers on the streets.

I presume you have never worked in public safety, and had to deal with a multiple casualty accident caused by a motorist not paying attention while changing lanes or passing.

For reasons that defy human nature, we sometimes assume that we can give 100 percent attention to performing two tasks at the same time, but it doesn't work that way.

In Vic's case, he's seeing these distracted motorists as he's driving a tractor-trailer with 10+ tons of product inside. When people change lanes suddenly, or just wander across lanes, he has to be prepared for their stupidity.

Any accident, whether or not he can prove the other person's responsibility, can affect Vic's career. It can also cost him personally on his personal car insurance, as well as legal fees he might incur if anyone in the accident tries to sue.

At some point in your life, Chevythang, you'll realize how hard you've worked over the years to own a home and nice posessions. You'll also say to yourself how wrong it is that other people may be able to take those posessions - and maybe your life, or the life of a loved one - away from you due to their stupidity.

1616. Streets and Trips

Yahoo group: chattradio
Date: 2002-09-03 02:48:30 UTC
From: richard4537312
Topic: 1616 Message: 1616

I may have just re-invented the wheel, but here's a monitoring aid that seems to be worth sharing with the group.

I live in north Bradley County, a couple of miles from the Hiwassee River, which is the McMinn County line. I typically monitor Bradley, Polk, McMinn, Monroe and Meigs counties. Monitoring McMinn is confusing, since all of their county roads are numbered, and incidents are dispatched in the form [number] County Road [number]. I could not tell whether an interesting call was merely a couple of miles away, or thirty miles away, somewhere close to the Monroe County line. I had a copy of Microsoft's Streets and Trips 2002, which had been lying around for a couple of months. I installed it, and presto - I can see exactly where these addresses are within seconds. Several times I have found myself sitting here looking at the location on my screen while the dispatchers were still trying to give their units directions for getting there. Works great for the entire region, not just McMinn County!

From: Burnett Eric
Topic: 1616 Message: 1622

Just a quick note to all. Addressing parcels is a complex issue. You don't really think that any of these programs has address information for the United States do you? All of these addressing programs make certain assumptions about addressing.

At least in chattanooga the emergency response is tied to parcels which is an accurate way and that is why they do not depend on these other programs.

Just one caveat: I have the 2001 version of Streets & Trips, and in that version a least, the street address data is less than perfect. I have found several instances where an address of known location was shown an intersection or two away from its actual location. But yes, it does help to find the general location.

Found an old handwritten list copied from a friends book. I hope these are
ok.

Walker County Sheriff's Office 10 Codes

10-0 Use caution
10-1 Weak Signal
10-2 Good Signal
10-3 Stop Transmitting
10-4 Message Received (Also "OK", "Acknowledged" and any assortment of
things)
10-5 Relay (Message?)
10-6 Station Busy
10-7 Out of Service
10-8 In Service
10-9 Repeat
10-10 Fight in Progress
10-11 Animal Problem
10-12 Stand By
10-13 Report Conditions
10-14 Prowler Report
10-15 Civil Disturbance
10-16 Domestic Problem
10-17 Meet Complainant
10-18 Urgent
10-19 Go to Station
10-20 Advise Location
10-21 Phone _________
10-22 Disregard
10-23 Arrived at Scene
10-24 Assignment Complete
10-25 Report to ....
10-26 Detaining Suspect
10-27 Drivers License Info
10-28 Vehicle Registration Info
10-29 Check Record for Want
10-30 Unauthorized Radio Use
10-31 Crime in Progress
10-32 Person With Gun
10-33 Emergency - All Units Stand By

10-34 Riot
10-35 Major Crime Alert
10-36 Correct Time
10-37 Suspicious Vehicle
10-38 Stop Vehicle
10-39 Respond W\Siren + Lights
10-40 Do Nor Respond W\Siren + Lights
10-41 Beginning Shift
10-42 Ending Shift
10-43 Information
10-44 Permission to Leave
10-45 Dead Animal
10-46 Assist Motorist
10-47 Emergency Road Repair
10-48 Traffic Control
10-49 Traffic Signal Out
10-50 Traffic Accident
10-51 Request Tow Truck
10-52 Request Ambulance
10-53 Roadway Blocked
10-54 Livestock in Roadway
10-55 Intoxicated Driver
10-56 Intoxicated Pedestrian
10-57 Hit and Run
10-58 Direct Traffic
10-59 Escort
10-60 Squad in Vicinity
10-61 Personnel in Vicinity
10-62 Reply to Message
10-63 Prepare to Copy
10-64 Local message
10-65 Net Message
10-66 Cancel Message
10-67 Clear for 10-65
10-68 Dispatch Info
10-69 Message Received
10-70 Fire Alarm
10-71 Advise Nature of Alarm
10-72 Report Progress of Alarm
10-73 Smoke Report
10-74 Negative
10-75 In Contact With _____
10-76 En Route to _____
10-77 ETA
10-78 Request Assistance
10-79 Notify Coroner
10-80 Pursuit in Progress
10-81 Breathalyzer Report
10-82 Reserve Lodgings
10-83 School Crossing Assignment

10-84 ETA
10-85 Arrival Delayed
10-86 Operator on Duty
10-87 Pickup
10-88 Advise Telephone #
10-89 Bomb Threat
10-90 Bank Alarm
10-91 Pick Up Object
10-92 Illegally Parked Vehicle
10-93 Blockage
10-94 Drag Racing
10-95 Subject in Custody
10-96 Detain Subject
10-97 Test Signal
10-98 Prisoner Escape
10-99 Wanted or Stolen
10-100 Police needed
10-105 Deceased person
10-106 Suspicious Person
10-107 Check Residence

Yahoo group: chattradio
Date: 2002-09-09 04:04:51 UTC
From: LFDGAJR@aol.com
Topic: 1623 Message: 1627

In a message dated 9/8/02 5:12:24 PM Eastern Daylight Time,
sdtnvols42@... writes:

> does anyone have a copy of the walker county sheriff dept in ga, 10
> codes.

As a general rule, Walker County Sheriff's Officers use plain english on the radio. In fact, when I was employeed by the Sheriff's Office SOPs stated that officers would use "plain english" on the radio to prevent confusion. Not all officers follow this so some will use a few ten codes. Many times they won't say the "10" just the last part of the code. The ones most often used are "25" for meet with/me, "95" for subject in custody, "21" for call by phone, "10-18" quickly, "10-8" in service, "10-7" out of service, "10-6" for busy, and "23" for on scene. Occasionally they use "22" for disregard. As I say, however, unless the SOPs have changed officers are supposed to use plain english as are dispatchers to avoid confusion when communicating with officers/dispatchers from other agencies and among Sheriff's Office personnel.

Hope this helps,
Christian KF4ZMB

Just as a reminder, this list does not allow attachments due to the risk of passing along a computer virus. If you have a file you think should be distributed to the group as a whole, please email it to me directly and I will put in on the ScanChattanooga website so the group members can go download it there.

I have the Chattanooga "400" codes, as well as the "D" codes, available on ScanChattanooga as a PDF file (2 pages long):

Steve,
Here's a suggestion.
Let's face it. We're all somewhat technically inclined, or we wouldn't be hanging around with this group. To outsiders, we are "technonerds."
Now, who does a sheriff's department, or any other organization, for that matter, put in charge of their website, other than the most proficient "technonerd" in their midst? If you contact the Walker County Sheriff's Department, using their feedback address available at http://www.co.walker.ga.us/cd_14.htm, I would be willing to bet you'll get exactly what you want. You can bet that the guy (or gal) that receives and replies to your request will be "one of us technonerds." Be sure to tell him what model scanner you have, carefully detailing any modifications you've made :-)

CSX and NS Railroad Police. Good Job.

I'm not sure if I count the Humane Society, I don't think they're P.O.S.T. certified.

There is one left...<hint> its a new agency within the city limits of Chattanooga.

Last time I checked (that would be about 10 years ago when I worked for Walker SO) they had discontinued the use of any 10-codes in Walker County and had gone to "plain language." This occurred at the same time their unified 911 dispatch center went into service in the early 90's.

I have not monitored them to any great degree lately but believe the above is still valid.

Update on train wreck, Knox County:
Norfolk Southern announced earlier this AM that they have the sulfuric acid from the ruptured car contained or neutralised, and Knox County EMA and SO will allow residents to return to their homes, effective 0600 today. Windows may be opened and HVAC used normally. It was recommended that any vehicles left outside during the evacuation be washed as soon as possible. A portion of Virtue Road in West Knox County will be closed for two-three weeks until it can be repaired. The locomotives have been re-railed and removed from the scene, along with cars which remained upright in the derailment. The scene is between Concord and Boyd Station on a very busy track. This line continues to Sweetwater and to Ooltewah, where there is (I remember) an interchange with the L&N (CSX). As a result, traffic between Knoxville and Chattanooga will be disrupted until the track can be rebuilt (shouldn't take very long, a maintenance of way crew is on standby). This is main line track with welded rail.
I can't hear any of the radio communications at the scene-I live on the other side (East) of Knox County. The Louisville community of Blount County, directly across the river from the scene, was also affected.

That's good news about the residents being able to return home today.

The affected NS line does come south through Sweetwater and Cleveland, TN. Just south of Cleveland the line separates, one line going to Chattanooga, and gives access to Birmingham, Memphis, and Cincinnati, connecting with CSX in Wauhatchie, TN. The other line continues south to Dalton, GA and Atlanta.

Hi Bill,

What do you want to do with the scanner? Trunked, conventional, a little of both? Except for Trunking, I don't see any real benefit to swapping a 62 for a 94. Uniden is coming out with a new BC-250D, Trunking, 1000 channels, Alpha Tags, computer programable, etc. Radio Shack has the PRO-93, 300 memories, trunking and Alpha tags...should be going on sale soon, they're replacing it with the PRO-95...appears to be the same radio, just 1000 memories.

Let us know what you'll be using your scanner for, and maybe we can give a better answer.

Jonathan

I don't know much about the Pro 94, but I know the Pro 93 allows you to program in Alpha tags for talkgroup ID's, a great advantage if you intend to monitor the Chattanooga Police, Fire Dept., etc.

The Pro-92 or Pro-93 would be excellent upgrades for what you want. Do not be deceived by the amount of channels or what it appears to do. The 92 offers pl/dpl(tone squelch and digital tone squelch). Multi-trunking/conventional and 500 channels. The 93 offers control channel only mode for trunktracking(put in 3-5 control channel freqs) and the radio does the rest of the work. The Uniden BC245XLT is also another easy to operate trunktracking/conventional scanner. 300 channels, allows you to build a scan list for each trunking system, and also does tt and conventional. Of course, all is up to the individual person as to what kind of radio to use!

Hope this helps,
Larry

Consider this, Nashville is an APCO 25 digital system on the public safety side. I've heard that Memphis may migrate that way soon, and Shelby county with their oddball digital may as well. The only scanners soon to be on the market to handle this is the Uniden BC-250D handheld and the BC785D mobile...both look like they'll be about $340, you'd also need the APCO25 card for about $325...a little expensive, but the only game in town. Both Uniden scanners are supposed to be 1000 memories, alpha tags, and dual modes (conventional, trunking, etc) at the same time.

The 94a is on sale for a good price, but I don't see spending money for basically what you already have.

Well, unfortunately, yours truly hasn't really had time to get up there when the weather has been cooperative, and really the antenna isn't moving that far. The new tower is about 15 feet or so away from the old tower, and the tower crews had already relocated the S-T-L dish and installed the channel 35 (WTVC's assigned digital channel) antenna on the tower, along with a two-bay auxiliary antenna for channel 9 before starting the work. The station is currently running on low power while they move the big channel 9 antenna over.

How long that will take is kinda unclear given the weather situation. Obviously working on a tower in the rain and storms we've had of late isn't a real bright thing to do, but also having the waveguide (for those who don't know, waveguide is more or less a pipe that is used instead of coax cable for microwave and very high power transmitting applications) and the antenna open to the atmosphere with the high humidity is also bad, as you want to keep those areas as dry as possible (normally, waveguides are pressurized with a few pounds of either dried air or nitrogen).

I'll try to run up there tomorrow in between errands, the weather should be nice and I'll shoot some photos.

1666. ScanChattanooga.Com - IMPORTANT - Re: Site Access

Yahoo group: chattradio
Date: 2002-09-24 07:40:24 UTC
From: Matthew Sadler
Topic: 1666 Message: 1666

IMPORTANT:

ScanChattanooga.Com is being moved to a different server, which should provide better reliability and speed than you get right now from either the current 216.78.152.60 (an old Pentium that also doubles as my footrest) server or www.qsl.net.

While these changes are occuring, it SHOULD be seamless - as the appropriate records are updated and those changes get passed along to the appropriate places on the internet and I've already put the pages up on the new host - but interruptions over the rest of this week to access to ScanChattanooga.Com are possible.

I figure if we're on low power at work to put up a new tower and bring our full-power DTV signal to the WTVC viewers, I might as well upgrade ScanChattanooga.Com to bring a more reliable and faster site to my viewers too!

1668. Pringles Can Antenna

Yahoo group: chattradio
Date: 2002-10-01 12:37:15 UTC
From: Richard L. Elliston
Topic: 1668 Message: 1668

Yesterday a story appeared in the Associated Press about secret service agents checking for security problems with Washington area wireless computer networks. One device used by the agents was a Pringles can antenna.
The relevant part of the story stated the following:

"Peterson's tools are a laptop, a wireless network card and one of three antennae mounted on his car. One is a small metal antenna; the second is a large, white, 2-foot-tall tube; the third is a homemade antenna made out of a Pringles can. They boost the reception of his wireless network card, allowing the agent to point them in different directions to get the best signal.

A Pringles can is ideal because of its shape ☐ a long tube that lets someone to point it at specific buildings ☐ and its aluminum inner lining. It acts like a satellite dish, collecting signals and bouncing them to the receiver, which is then wired into a laptop."

The story didn't tell anything about how the Pringles can antenna was made, but it occurred to me that one might be a useful addition to our scanner gear. Does anyone have any idea how to make the antenna?

From: Jonathan Guy
Topic: 1672 Message: 1672

P.64 of the manual - If the scanner finds that a talkgroup in one of your active Scan Lists is on the air, you will begin to hear that communication and the scanner will of course display the proper talkgroup umber and any alpha tag. When the communication ends, the scanner will wait for 5 seconds for any furhter replies and, if non, the scanner will move to the conventional channels in the same bank or to the next bank.

The scanner will not look for any other IDs within the same trunked system (as this would slow the scan process).

Hmmm...this may or may not be a good thing....

Motorola System Brings One Call to City Hall for Residents of Chattanooga, Tenn.

Customer Service Request System to Centralize Incoming Non-Emergency Calls; Increase Productivity and Improve Response Time

SCHAUMBURG, Ill. Oct. 8, 2002 ? Motorola (NYSE:MOT) today announced that the City of Chattanooga, Tenn., has selected Motorola?s Customer Service Request (CSR) system to centralize and automate government service delivery in Chattanooga. Chattanooga is the first city in Tennessee to purchase the CSR system, which is part of Motorola?s extensive portfolio of integrated communications and information solutions to address mission-critical public safety and security requirements worldwide.

?Chattanooga?s one-call center will enable us to provide a much higher level of customer service to the citizens of our community,? said Mayor Bob Corker. ?Chattanoogans will soon have the ability to call one number, talk with one person and get one answer to their inquiry, suggestion or complaint. This new level of customer service democratizes local government and gives every citizen, no matter what walk of life, an equal voice.?

?We?ve designed the system so cities such as Chattanooga can automate their responses to citizen requests and collect important data that can be used to better manage city resources,? said Marshall Wright, Motorola Communications and Electronics vice president and director, Integrated Solutions Division. ?The CSR system enables the city to configure its system to match the unique workflow requirements of public sector workers, measure agency accountability, and make changes that will better serve its citizens.?

Currently, Chattanooga does not have a centralized way of handling incoming calls from citizens. Constituents are challenged with looking at a directory listing dozens of agencies and phone numbers and then determining which to call. Often, a caller may dial several numbers before getting the appropriate department. Once a call is received, the city uses a manual system to route citizen requests.

Using Motorola?s CSR system, citizens will call one number. A call taker will then route that call to the appropriate department where the activity will be tracked, escalated if more immediate attention is necessary, and entered into a central database. Chattanooga officials will be able to track data that includes the nature of the problem, location, caller, time of day, which department responded and length of response time.

?The CSR system will help Chattanooga improve the quality of service delivery, increase efficiency, and help make it easier for policymakers to hold agencies accountable, ? said David Eichenthal, director of the City?s Office of Performance Review, who is responsible for the One Call to City Hall initiative. ?Because of the CSR system and other initiatives, the Office of Performance Review will cover its costs and save the city money within 18 months.?

The city anticipates launching its Call Center in February 2003. Chattanooga joins other cities around the United States that have purchased Motorola?s CSR system for non-emergency requests, including Dallas, Austin and Houston, Texas; Baltimore, Md.; Chicago; San Jose, Calif.; Winston-Salem N. C. and Akron, Ohio.

About Motorola's Safety and Security Solutions
Motorola is a leading provider of integrated communications and information
solutions with 65 years of experience in meeting the mission-critical requirements of public safety, public service, government and enterprise customers worldwide. The company's extensive public safety and security portfolio includes: interoperable two-way radio communications solutions with encrypted security capabilities; command and control equipment and software applications, including computer-aided dispatch, 9-1-1 and 3-1-1 systems, and automated records management systems; identification and tracking solutions, including palm/fingerprint and photo-imaging systems, as well as comprehensive information management capabilities for criminal justice and civil needs; and physical security and monitoring solutions, including remote monitoring and diagnostics.

About Motorola
Motorola, Inc. (NYSE:MOT) is a global leader in providing integrated communications solutions and embedded electronic solutions. Sales in 2001 were $30 billion. For more information, visit www.motorola.com.

1678. New Walker County Fire/Rescue Repeater?

Yahoo group: chattradio
Date: 2002-10-12 16:49:24 UTC
From: Matthew Sadler
Topic: 1678 Message: 1678

Looking through the FCC's database again and found an application by Walker County, GA for an interesting assortment of frequencies:

72.640 - Walker County E911 Center
151.490 (repeater), 157.450 (base) - High Point Firetower
151.490 (repeater), 157.450 (base) - Taylor's Ridge
154.340, 155.985, 153.905, 151.490, 154.070 - mobiles

What makes this interesting is the fact that the 72.640 and 157.450 frequencies are both being applied for with 20K0F1D emission - data, not voice... leads me to think that they may be fixing to get their own paging system. The 151.490 repeater is applied for with 20K0F3E, standard FM voice, and 154.070 will probably be the input.

>> Has anybody heard of a frequency for something called "Metro Traffic?" I heard it being talked about on a groups for Ohio. Is there such a thing down here in Chattanoga?

Metro Traffic and Metro Networks are trademarked names owned by Westwood One for the traffic and news operations Westwood maintains in cities throughout the U.S.

Many broadcast stations find it cost-efficient to contract out their traffic reports to Metro. Metro will tailor the report to the customer's needs (demographics, station format). In many cases, Metro sells and collects the revenue from ads aired during the report, making it a win-win situation for both the station and Metro.

There are other large and small companies doing the same role as Metro in every major broadcast market. I don't believe Metro has an operation in Chattanooga, but they did in Memphis, Nashville, Atlanta, Birmingham and Charlotte.

As far as frequencies, Metro can often be found on the 450-MHz media frequencies, which they use for operations and links to individual stations. Like everyone else, some locations have switched to Nextel and other services for operations.

We have "Metro Skywatch". I don't know if it's part of the same
group you are asking about.

Frequencies can be found at:

http://www.scanchattanooga.com/media.html

I found it to be fairly boring listening, and haven't listened in
several years. I don't know if the frequencies are still active or
not.

Matthew:

The Knoxville website you posted is a good one. I travel through Nashville a great deal. Is there a similar website, that you know of, for the Nashville area.

Thanks

David

1688. Cleveland 10-codes

Yahoo group: chattradio
Date: 2002-10-19 07:27:50 UTC
From: Brian
Topic: 1688 Message: 1688

I've been looking for weeks for an accurate list of the
Cleveland/Bradley county 10 codes. Anyone have one?

1689. 800 mHz Antenna

Yahoo group: chattradio
Date: 2002-10-19 15:25:56 UTC
From: Richard L. Elliston
Topic: 1689 Message: 1689

Can anyone point me in the direction of plans for building an 800 mHz outdoor antenna? I've got the Shack's best discone installed in a great location, which provides good coverage for everything I want to monitor, except the Chattanooga TRS.

1690. Re: [chattradio] 800 mHz Antenna

Try Grove Enterprises for an 800 Mhz antenna that will fit almost any where.
It's not a kit but it works well as an 800 Mhz only antenna.

None that I know of for Nashville, but the problem there is that
Nashville/Davidson County Metro Government is on a digital 800 MHz system,
as is the state's trunking system for the capital functions.

The Coliseum (previously the Adelphia Coliseum, but they took the Adelphia
name down when Adelphia tanked) has a 6 channel (I think) UHF LTR analog
trunked system. There is some information about it at trunkedradio.net .
